# Yahoo Group Archive: HoustonScan (2005 — 2006)

Yahoo Group summary: For radio scanner enthusiasts in and around the Houston, Texas area.

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2016. This PDF was generated by Digital Library of Amateur Radio & Communications from the WARC files in 2026.

Date span: 2005-01-01 through 2006-12-31

Source WARC: houstonscan.UjMHkem.warc.gz

Source item: https://archive.org/details/yahoo-groups-2016-06-17T19-53-03Z-ecb91a

Messages included in this PDF: 4097

Messages omitted as spam from this PDF: 1

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

# 8403. Happy New Years Everyone!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-01 04:57:52 UTC
From: scanpadotcom
Topic: 8403  Message: 8403

Best wishes to everyone, have a safe night.

When you get time, please check out the Houstonscan.com website project.

http://www.houstonscan.com

Don't forget to sign up for the all new Houstonscan mailing list hosted on our own mail server. No Yahoo Spam, No Yahoo Ads, and NO Yahoo slow posting server problems. Just click on mailing list on the left menu.

Any ideas, please let us know. Some things are still under construction. And we need to know what Forums you would like in the forum section. Downloads area is for people to upload scanner files, and trunker data files. If you want another category, please let us know.

Free registration to join.

# 8404. Re: West Side Area TG 17296

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-01 06:45:22 UTC
From: James Sitton
Topic: 8356  Message: 8404

TG 17296
I heard reference on TG 17296 to a sign down Liendo Parkway another unit said he was on FM 529. Sounds like Waller County to me.

TG 23376

I heard two units discussing, if the fireworks at DiIorio's was in the city (Hempstead) or the county (Waller County). But not enough to determin the main use of the group, maybe a Hempstead Car 2 Car? or a County group?

I have some of the talk group numbers for Waller County

23152 - Waller County Primary
23376 - Waller County Law Enf. mutual aid (like car - car)
23184 - TAC Channel for Sheriff Dept.
23408 - Brookshire PD
23344 - Hempstead PD
23440 - Waller PD

Good work. Sounds like some good guesses to me.
Were these heard on the Hempstead site?

I think it came from the Hempstead site. I am in Waller and that is the main one I pickup but I have several others in this bank on my Pro-95 scaner. I am new to trunking and I have to look close to figure out witch site it is receiving and I was more concerned with grting the TG number at the time. I have not heard anything else on that TG.

I will add 23440 for Waller PD that is one I have been missing. I
was not too sure about 23376, good to know

Thanks

From: Myles Barkman
Topic: 8356  Message: 8409

I know what you mean. On my main STAR-Net bank, I have Houston, Pearland, Baytown, Alvin, Texas City, Clodine, Tomball, Tamina & Richmond control channels programmed in so that if I happened to only be in range of just one of those, I could listen to the system. The problem occurs when it does switch to something like Pearland when I don't really want it to and then it gets locked onto that system as long as it can still pick it up.
Then when I really want it to track Houston (for better signal and more affiliated talkgroups) I have to take the antenna off, let it loose it's grip on Pearland, then put the antenna back on and see if it locked onto Houston.
The BC-296D does not let you lockout control channels like the BC-780XLT. I liked that feature.

# 8412. Re: [HoustonScan] Houstonscan mailing list

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-03 05:47:13 UTC
From: Myles Barkman
Topic: 8410  Message: 8412

Actually, that should read http://www.houstonscan.com

Just to let everyone know, this is not some sort of spam/scam.
I've not been very impressed with the speed and dependability of Yahoo and have been working with Peter on ways to improve this mailing list as well as my frequency lists.
He has offered to put everything on one server (mailing list, web pages, chat, files sections, photos, links) and in time we should make everything better than we have now.
I've already uploaded all my lists to this new server and have already made some updates.
At some point, we should make the lists searchable/sortable so that the user can create their own lists with the data sorted by whatever fields they want.
It seems to be a win-win situation as long as Peter wants to support this.
There have been several folks contacted to act as administrators to this process as well so I'm not the only one having to run the thing.

I encourage everyone on this list to subscribe using the new server (remember-no spam, faster posts, no one selling your emails).
All you have to do is register to get a username and password. Same thing anyone has to do to get on the Yahoo lists.
Eventually, the Yahoo list may even disappear when the transfer is complete and everything is in full swing. Or, I may just keep it as an informal discussion group for long-term events or less-than-on-topic items.

Subject: Re: [HoustonScan] Houstonscan mailing list

Actually, that should read http://www.houstonscan.com

Just to let everyone know, this is not some sort of spam/scam.
I've not been very impressed with the speed and dependability of Yahoo and
have been working with Peter on ways to improve this mailing list as well as

my frequency lists.
He has offered to put everything on one server (mailing list, web pages,
chat, files sections, photos, links) and in time we should make everything
better than we have now.
I've already uploaded all my lists to this new server and have already made
some updates.
At some point, we should make the lists searchable/sortable so that the user

can create their own lists with the data sorted by whatever fields they
want.
It seems to be a win-win situation as long as Peter wants to support this.
There have been several folks contacted to act as administrators to this
process as well so I'm not the only one having to run the thing.

I encourage everyone on this list to subscribe using the new server
(remember-no spam, faster posts, no one selling your emails).
All you have to do is register to get a username and password. Same thing
anyone has to do to get on the Yahoo lists.
Eventually, the Yahoo list may even disappear when the transfer is complete
and everything is in full swing. Or, I may just keep it as an informal
discussion group for long-term events or less-than-on-topic items.

I think the new mailing list will work alot better than
the Yahoo.. I run several mailing lists and I moved them
over to this new format nearly a year ago with very good
results...

I guess I should be posting this to the new list ;-)

Choice of venue ... you want food or coffee?

Hmmm ... for coffee, Cafe Artiste on Mandell near the Menil Gallery. I
know at least one person will be there ;^)

# 8421. Re: [HoustonScan] Meetup?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-04 06:00:00 UTC
From: Debbie & Sly
Topic: 8410  Message: 8421

Well that is up for discussion. Either type would be fine with me. I'm not a coffee drinker but as long as they have other items to drink or other snack/lite food items like many coffee houses that's fine by me...

For some suggestions; a place that has ample seating, a place where folks can come come and go without necessarily having to buy something. I would not suggest a restaurant (or other place) that requires "to be seated", as you never know how many and when folks show up. Also not a place that is always packed or has waiting lines. I would suggest a place that is a little noisy so our scanners won't too obtrusive. I would not reserve a meeting room until we get feel of how many folks show up on a consistent basis.
Houston is a big place, it is impossible to please everyone with an "ideal" location. So maybe move the meetup spot around to accommodate those on the opposite end of town or maybe somewhere "centralized". As for me, somewhere on the NW side as I live way NW of Houston. ;-)
As for a day, here again can't please all. I would maybe suggest either a Sat or Sun. Since most folks are off and don't have the evening weekday traffic to deal with trying to get to the meetup spot.

Be nice to put some faces with these e-mails!
Sly

# 8425. Re: [HoustonScan] Meetup?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-04 08:09:33 UTC
From: Eric Scalf
Topic: 8410  Message: 8425

Actually...

The meetup idea was followed through by me.
Check out http://scannerradio.meetup.com for more information on the "Scanner Radio Meetup." Currently there are very few members signed up for Houston, and we have had no successful meetups, yet. The current location (Agora, a bar in central Houston on Westheimer) is not the best, but is reasonable for our needs (no drink minimum, outside seating area, will allow equipment at non-disturbing volume, etc...).

I currently manage the Houston scanner meetup and am more than willing to take suggestions for alternate venues. I am looking for a way to segway the setup back to the old method of allowing members to vote on a venue each month. Until that time, if you guys have suggesstions for meetup locations, please feel free to sign up at meetup.com and post your suggestions in the forums, there. Remember that not all members there are members here.

The reason I selected meetup.com as a way of promoting this, is the fact that it allows an easy point of contact, easy management of events, and allows people to RSVP to events. Currently the next meetup is Monday, January 24th, 7:00pm at Agora. There is a poll currently on the meetup site asking members to select the day that will suit them best (out of the five listed (mon,wed,fri,sat,sun)) and toward the end of the month I will be changing the date to reflect the majority choice. Anyone else who would like to help me maintain the meetup group is more than welcome to let me know.

From: Josh W.
Topic: 8426  Message: 8426

Someone in range of the Ames site needs to be on the lookout for new talkgroups. I heard them doing radio checks on the old VHF frequency (155.025, pl 146.2) all day yesterday, plus the base station audio is louder and now sports a trunked PTT chirp. Sadly, it also sounds like the VHF
side is now dispatcher-only.

I'll check it out. It would be nice if the new HoustonScan.com could
include a "meetup" feature (hint, hint). I can't imagine this happening
on a regular (ie. monthly) basis. Maybe quarterly or bi-monthly.

It's got a grown-up atmosphere, and a central location ... a fair
compromise for folks coming in from way-out like Friendswood, the
Woodlands, Arcola, Pearland, Kingwood, Baytown, Pasadena, or whereever.
If everyone buys a drink, ... maybe Michael or George will throw in some
baklava.

Just don't go there on a Wednesday night. *cough* belly dancers *cough*

From: Scott Royall
Topic: 8410  Message: 8428

Not that it's a bad idea, but I'm not sure what the objective is. After all, we don't really have a common hobby like, say, hams do. Sure, we all buy scanners, but our reasons are as varied as there are models. Without some sort of focus, any meeting would be very haphazard and chaotic. The local Fidonet BBS sysops used to do similar meetings monthly, but we had a technology that linked us together. But, since they don't transmit, scanners are a bit different.

# 8429. RE: [HoustonScan] Meetup?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-04 20:30:43 UTC
From: Scott Royall
Topic: 8410  Message: 8429

Belly-dancers? Now that's a reason to meet! Screw the radios.

I'll check it out. It would be nice if the new HoustonScan.com could
include a "meetup" feature (hint, hint). I can't imagine this happening
on a regular (ie. monthly) basis. Maybe quarterly or bi-monthly.

>The current location (Agora, a bar in central Houston on Westheimer) is not
the

>area, will allow equipment at non-disturbing volume, etc...).
>
>
It's got a grown-up atmosphere, and a central location ... a fair
compromise for folks coming in from way-out like Friendswood, the
Woodlands, Arcola, Pearland, Kingwood, Baytown, Pasadena, or whereever.
If everyone buys a drink, ... maybe Michael or George will throw in some
baklava.

Just don't go there on a Wednesday night. *cough* belly dancers *cough*

>Currently the next meetup is Monday, January 24th, 7:00pm at Agora.
>
Noted.

# 8430. Re: [HoustonScan] Meetup?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-04 21:10:02 UTC
From: Eric Scalf
Topic: 8410  Message: 8430

Not really. It's a lot like this mailing list, here.
We all enjoy the same general hobby, so we come to a central place to
meet and discuss it. We tend to trade information, tips, tricks,
favorite frequencies, favorite things to listen to, etc... As a matter
of fact, I've started listening to some new things simply from being on
this list because I found them as interesting as the person who posted them.

Meetups are rarely heavily structured events. The majority of the time
it's a lot of people with the same general interest who get together in
a single location and wind up talking amongst themselves for however
long they feel like, about whatever topics arise. I've gone to the
poker meetup and while the topic started out on poker and ended up on
poker, we discussed the Esperanto language and Belgian coffee makers in
the middle.

Out reasons may be varied, but we all generally enjoy the listening to
and use of scanners and related equipment. What matters is the
enjoyment of the hobby, not the specific reasons for doing so.

I'm sure HoustonScan.com could link back to the meetup website quickly
and easily, I look around and see if there's a way to appoint a second
person to maintain and/or affiliate with a website (which would be
nice). You're right.. monthly is a bit grim. Possibally, have monthly
smaller meetings, and then a large quarterly thing? Who knows.

> Just don't go there on a Wednesday night. *cough* belly dancers *cough*

But... that's the reason to go, I thought. heh.

Yep, your description would□ve fit that sysop group too. Yes, our Saturday lunches were fun while they lasted. The funny thing is, the group tended to split up into small clichés along the lines of pre-existing acquaintances. Of course, that was a decade ago, and my ability to communicate verbally with strangers was limited at best. I didn□t have the software and hardware I do now.

Maybe I'm just becoming a crusty hermit in my old age. I don□t even listen much anymore. The VHF and UHF ham stuff has become rather insipid, and the public safety comms grate on the nerves after a while. Listening to MickyD's, Wally World, cheating lovers, and the like doesn□t do anything for me. That□s why the radio on my wheelchair is normally set to the talkgroups and channels for the area I'm currently in. That's plenty for this old boy.

The Agora sounds very appealing, but I must pass this time anyway. An idiot ex-caregiver of mine stole my van last month.

From: Debbie & Sly
Topic: 8410  Message: 8433

First off we're not talking about an organized meeting like where you are electing officers, collecting dues, memberships and so forth, like maybe a ham club would have. The objective would more/less a get to know your fellow hobbiest, be able to discuss local scanning issues, show off the latest equipment/software/vehicle installs, share freqs, and other scanning related stuff. More/less an "in-person" extension of this list.

As for the meetup website, while a good concept but wouldn't it make more sense to get the word out here on this list where there are plenty of subscribers? I don't want to have to check or subscribe to another list just for that one purpose. You mentioned you had tried it before and no results, so maybe time to try something different? I see there is only 6 members on that group. However maybe it could be used in conjucction? with this group somehow. Post the meeting info there but make regular annoucements here where the bulk of people are. I dunno, just a thought.

Ok so looks like we have votes for Cafe Artiste and for Agora's

What'l it be??

Or another place?

Also looks like the 24th is a Monday. Personally weekdays aren't that great of a choice for me (but I'm just one person) a weekend sometime would work better.
Any opinions on this?

Speak now or forever hold your peace!!

Date: 2005-01-05 09:15:15 UTC
From: Steve Nelson
Topic: 8435  Message: 8435

THE FIRST SKYWARN PROGRAM IN SOUTHEAST TEXAS FOR 2005
WILL TAKE PLACE
WEDNESDAY NIGHT FROM 630PM TIL 900PM. THE PROGRAM WILL
TAKE PLACE AT
THE HOUSTON EMERGENCY CENTER LOCATED AT 5320 NORTH
SHEPHERD.

SKYWARN IS A PROGRAM SPONSORED BY YOUR NATIONAL
WEATHER SERVICE
OFFICE IN CONJUNCTION WITH YOUR LOCAL EMERGENCY
MANAGEMENT
ORGANIZATION. IT IS A GROUP OF TRAINED VOLUNTEERS THAT
WATCH THE
SKIES DURING SEVERE WEATHER AND RELAY REPORTS BACK TO
YOUR EMERGENCY
MANAGEMENT ORGANIZATION AND OR YOUR LOCAL NATIONAL
WEATHER SERVICE
OFFICE. THESE VOLUNTEERS PROVIDE VALUABLE INFORMATION
TO THE
NATIONAL WEATHER SERVICE. YOUR INFORMATION HELPS
IMPROVE THE WARNING
PROGRAM WHICH COULD SAVE LIVES AND PROPERTY IN YOUR
COMMUNITY AND
SURROUNDING COMMUNITIES.

THE HOUSTON/GALVESTON AREA NATIONAL WEATHER SERVICE
OFFICE WILL BE
CONDUCTING THE TRAINING SEMINAR ON WEDNESDAY JANUARY
5. THE SESSION
WILL BE HELP FROM 630PM TIL 900PM. IF YOU LIVE IN THE
HARRIS COUNTY
AREA AND ARE INTERESTED IN BECOMING A SKYWARN
VOLUNTEER PLAN TO
ATTEND THIS TRAINING SESSION,

FOR FURTHER INFORMATION PLEASE CONTACT THE CITY OF
HOUSTON'S OFFICE OF
EMERGENCY MANAGEMENT AT 713-884-4500.

For future reference, there's a wheelchair ramp in the back. The reason I suggest avoiding Agora on Wednesday nights is because it's packed - standing room only - and no parking. You might have to park a block or two away.

Hi Chris,
I tried entering more than one control channel in a bank in my Pro-95, but it'd only scan one system. I than put each control channel in differenet banks and it worked fine. Thanks for all your help!

Maybe we could have 'Field Day' like the hams do.

# 8440. Re: [HoustonScan] Meetup?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-05 22:56:57 UTC
From: Eric Scalf
Topic: 8410  Message: 8440

The signing up at meetup.com is simply a way to RSVP, and to make easy and organized changes (and to notify people en mass). Not all of the subscribers at meetup are subscribers to this list, or houstonscan.com... although I will certainly be promoting them in the future (it's going on my todo list as soon as I make the one for this month. I'm that far behind, heh). It's a lot like evite.com, in a sense. Not neccisarily another discuss list - just a centralized point where we can all look and see "Oh, Debbie and Sly are coming, Robert's coming, Michael's not, Richard's coming, Eric's not, Lisa's undecided" that sort of thing, instead of a million messages floating about, and someone having to do tally by hand.

poll up at the meetup.com site on days.. I only picked a monday because
it seemed reasonable - not too many people would have their plans
interrupted, and someties it's nice to sink into a hobby for an hour or
two after being thrust into the work week again.

As for days, I'm more inclined to Wedensdays or Saturdays, myself.

Steve,

I live just across the Harris County Line inside Ft. Bend County. I'm
less than a mile inside Ft. Bend. My Zip code qualifies as Harris
(77083). Would I be allowed to participate?

Marvin,

I've had success with multiple control channels for the same system
(i.e. Star*Net) in one bank, and the scanner picking the strongest one
as I move around town, however I have not had any success with multiple
systems in the same bank - even if they are both motorola. Not sure
about EDACS, though. It would stand to reason they wouldn't work either.

# 8444. HISD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-06 00:21:05 UTC
From: Myles Barkman
Topic: 8378  Message: 8444

With all the recent talk of the system being broken into separate sites,
I've been doing some listening.
Sounds like the HPD Citywide link is gone. Wonder if it is switchable or if
they just got rid of it all together.

The new Missouri City site seems to be here and there. Sometimes, I can't
hear a control channel on anywhere on the system.
The other day, I had just entered the frequencies in and started to scan the
system when the control channel went dead.
Perhaps they are still in the testing phases.
Has there been actual two-way traffic reported on this system?
Is it fully linked to the Williams Tower site?

Had there ever been any I-call (private call) activity on this system, in
the past or present?
I can't recall if I ever heard it but since I'm not an overwhelming fan of
listening to the system before, I may not have cared to remember.

Right now, there is a control channel active on 867.4125 but when the
Pearland STAR-Net site kicks on their 867.400 MHz repeater, it eats up the
signal.
I'm not actually tracking the site on the scanner right now but listening to
the control channel, it does not appear to be running any two-way activity.

Yes ... it true folks. Myles can tell what talkgroups are active just by
*listening* to the buzz on the control channel.

# 8447. Re: [HoustonScan] Meetup?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-06 02:15:37 UTC
From: Debbie & Sly
Topic: 8410  Message: 8447

Post a poll on both. Until more folks jump on meetup.com I think there would be a better turn out over here with results.
I was going to do one on this list just now but looks like only a moderator can do it.

Eric Scalf wrote:

Well, that's not exactly true. I have to remember what the control signal sounds like, then later I regurgitate the sound of the control channel through a microphone while running E-Trunker to see what talkgroups were active.
Jeez, I'm not some weirdo freak!

LOL!

Now *that* would be worth coming to the next meet-up to see (and hear) in person.

Topic: 8215  Message: 8451

I hate to bring this back up, but if anybody is wondering, i have made a little progress. The progammed radio will go into program mode, but if i use my fast comp. it gives that same error, i've gotta use a slower comp. i think, so my next test will be to find a slower comp.

# 8453. New poll for HoustonScan

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-07 05:16:37 UTC
From: HoustonScan@yahoogroups.com
Topic: 2083  Message: 8453

Enter your vote today! A new poll has been created for the
HoustonScan group:

What day of the week would you like to
have a meet-up on? Please vote for your
two favorite days. weekday would be a
evening gathering. Weekend would be an
afternoon gathering.

o Monday
o Tuesday
o Wednesday
o Thursday
o Friday
o Saturday
o Sunday

To vote, please visit the following web page:
http://groups.yahoo.com/group/HoustonScan/surveys?id=1583418

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

# 8454. New scanner to debut from Uniden- 396t

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-07 05:25:23 UTC
From: Debbie & Sly
Topic: 8454  Message: 8454

If you've been eyeballing a new high end scanner (or the 246t) you may want to hold off until this one comes out, antcipated late summer '05. Looks like to be the big brother of the 246t, including digital.

UNIDEN DEBUTS APCO 25 CAPABLE DIGITAL SCANNER AT CES

New Handheld Model Includes Advanced Scanner Technology
In an Ultra-Compact Design

LAS VEGAS, Nevada, January 6, 2005 ? Uniden America Corporation, a leading manufacturer of wireless consumer electronics, will introduce a new handheld digital scanner, the Bearcat BCD396T, at the Consumer Electronics Show (CES), January 6-9, 2005, at the Las Vegas Convention Center in booth #14414. The BCD396T offers APCO 25 digital capability, allowing users to monitor the activities and signals of city and government service departments, utilizing advanced scanner technology in an all new compact, handheld design.
Featuring APCO 25 capability, Uniden?s BCD396T is poised to improve interoperability between large cities currently using the digital systems and those smaller municipalities that still operate on analog systems.
Uniden?s BCD396T will not permit users to monitor encrypted signals from national and local security organizations.
The Bearcat BCD396T also offers Close Call? RF Capture Technology, Dynamic Memory Management, Fire Tone-Out as well as 5,500 channels and a frequency range of 25MHz to 1300MHz, excluding cellular. This new model is slated to hit shelves in late summer 2005.
?With the BCD396T, we listened to our consumers and have incorporated their feedback on features they wanted, into a high-quality product that meets the demands of both professionals, such as law enforcement officials, and scanner enthusiasts,? said Paul Opitz, Uniden Product Manager. ?For example, we have eliminated the proprietary battery pack and removed the need for an add-in board for APCO 25,

reduced the size of the model, and added
a backlit keypad.?

# 8460. new PHI helicopter freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-08 12:00:32 UTC
From: Myles Barkman
Topic: 8460  Message: 8460

Got some relevant local info from the DFW list.
PHI appears to be splitting up use of their 159.990 MHz freq so that each
base has their own channel.

Conroe 160.1025 MHz
Richmond (Polly Ryon) 159.570 MHz
Richmond (Polly Ryon) 158.385 MHz
La Porte 151.730 MHz

So perhaps on Tomball would be left using the 159.990 MHz freq.
Still no word on any PHI activity on 154.515 MHz

Report any use on these other frequencies.

I don't recognize that radio model, but the need to use a slow, old computer with programming software is pretty typical.

Sometimes, you can boot to dos with a floppy or cd (say, dos 6.2) on a newer PC, and run a program called "moslow" or "motslow". It slows down the new PC enough for the software to work. This is pretty common with Motorola software, at least.

And no, I don't have any Moto software at present :-)

) ) You will be assimilated... oooh, coffee!!

What the first 3 numbers/letters of the serial number? I was told by
someone who sold these radios that only certain models will do 800
trunking in the area you are trying to do.

# 8469. Pasadena train derailment

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-08 22:00:43 UTC
From: Myles Barkman
Topic: 8469  Message: 8469

Train derailment within plant at 11400 Port Rd/Hwy 146 near La Porte.
Two tanker cars turnover, engine turned over. Fire in engine leaking fuel.
Tanker cars leaking hydrogen peroxide. Three crew members from engine
missing.
Harris County Hazmat notified.

Ops on Pasadena fire 154.010 MHz talkgroup 7120.

Calling emergency management.
Calling for shelter in place in area.

Keymap 580W.

# 8471. Re: [HoustonScan] Pasadena train derailment

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-08 22:14:15 UTC
From: Myles Barkman
Topic: 8469  Message: 8471

Update: Three crew members are accounted for. Have not heard their
condition.
Other agencies are shutting down traffic along 146.
Placard number on tankers is 2015. This is 60% Hydrogen Peroxide aqueous
solution.
Has potential for fire/explosion and toxic.
Protocol calls for evacuation 1/2 mile in all directions.

Ops moved to Fire-3 which is using Houston STAR-Net system talkgroup 7344
which is patched to Fire-1 anyway in Pasadena.

# 8472. Re: [HoustonScan] Pasadena train derailment

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-08 22:19:04 UTC
From: Myles Barkman
Topic: 8469  Message: 8472

Still trying to find that out as well.
Asking for a backhoe, presumably to catch run-off.
Districts 6,10,9 & 8 called out for this event.
Will consult my newer Keymap to see if it show what plant it is.
Google does not give me a plant for that address.

From: Myles Barkman
Topic: 8469  Message: 8474

OK, this may be the PolyOne Corporation Color Facilities plant at 5306 Highway 146.
http://www.polyone.com/index.asp
Pasadena Fire has called for the Pasadena command post truck and for a foam truck from Celanese.

They are trying to keep leaking diesel fuel from engine car from mixing with hydrogen peroxide leaking from tanker cars.

# 8475. RE: [HoustonScan] Pasadena train derailment

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-08 23:38:29 UTC
From: Michael W. Jones
Topic: 8469  Message: 8475

Operations have moved to Fire-2, and is no longer on STAR-Net. Last report before they moved off STAR-Net was that they had a truck on scene to try and pump the diesel fuel out of the engine, and UPRR was trying to separate the undamaged portion of the train and move it away.

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Pasadena train derailment

Update: Three crew members are accounted for. Have not heard their condition.
Other agencies are shutting down traffic along 146.
Placard number on tankers is 2015. This is 60% Hydrogen Peroxide aqueous solution.
Has potential for fire/explosion and toxic.
Protocol calls for evacuation 1/2 mile in all directions.

Ops moved to Fire-3 which is using Houston STAR-Net system talkgroup 7344 which is patched to Fire-1 anyway in Pasadena.

From: John Steiger
Topic: 8469  Message: 8476

sorry about the all caps

ACCORDING TO UNION PACIFIC: IT WAS LOCAL TRAIN THAT SERVES THE PLANT IN THE AREA. ONE LOCOMOTIVE AND 2 TANK CARS DERAILED AND CAUSE A SMALL FIRE. THERE WERE NO INJURES AND THE AREA EMERGENCY PERSONNEL ARE WORKING TO PLUG THE LEAKS. THE DERAILMENT HAPPENED AROUND 345PM

HIGHWAY 146 IN LA PORTE IS CLOSED IN BOTH DIRECTIONS. ACCORDING TO LA PORTE FIRE DEPARTMENT THE DERAILMENT IS NOT INSIDE A PLANT NEAR THE INTERSECTION OF HIGHWAY 146 & RED BLUFF. 2 RAIL CARS DERAILED AND ARE LEAKING HYDROGEN PEROXIDE. ALL CREWMEN HAVE BEEN ACCOUNTED FOR. THERE IS A SHELTER-IN-PLACE FOR SEABROOK, THE SUBDIVISIONS OF EL JARDEN, EL CARRIE AND KIRBY BEND. EMERGENCY MANAGEMENT THE CITIES OF TAYLOR LAKE VILLAGE AND EL LAGO ARE STANDING TO BY TO SEE IF THEY ARE TO SHELTER IN PLACE. FIRE DEPARTMENTS FROM PASADENA, SEABROOK, LA PORTE AND HARRIS COUNTY HAZ MAT ARE WORKING TO CONTAIN THE LEAK. HIGHWAY 146 AND RED BLUFF ARE SHUT DOWN.

Actually, they are on Fire Command-2 talkgroup 7472 which is on STAR-Net so all you folks in range of the Houston site can still monitor the operation.

Just got through walking the dogs & child and heard that the responsible party is FMC Corporation and they are on location assisting in the clean-up.

Have not tried listening to railroad freqs yet to determine what may be interesting.

# 8479. Re: new PHI helicopter freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-09 01:54:35 UTC
From: Cpt. Glenn Jones
Topic: 8460  Message: 8479

Guess I should step in here and clear this up. I am one of the ems pilots for PHI ems ops here in Houston. We are all still using the 159.900 MHz freq with the same PL tone in Houston as always. As far as I know the birds in Dallas are still using only 159.990 MHz. You may hear us on other freqs when we are talking to other departments for LZ or patient information. We have the technosonic radios which allow us to dial up any VHF or UHF single channel frequency. We are suppose to be getting the STAR-NET system and Galveston trunked system in our La Porte aircraft soon. So look to be hearing us on there. No we will not be getting our own talkgroup as of yet. Just for communications with ground contacts. Hope this clears things up a little. As for the 154.515 MHz I have not heard anything in use for it for us. Now it could be our Oil and Gas side of the house which is the largest helicopter operater in the world.

Cheers,

Glenn

The Tomball base should be using NW EMS 1 as their "base" channel.
I've heard them on there saying were they are going.

# 8482. Re: GX 5800

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-09 03:46:19 UTC
From: scanfan02
Topic: 8215  Message: 8482

Update:

I have a slower Compaq desktop comp. I tried to program a radio with it. I don't have the STAR-Net file yet from the programmed one, so I tried putting in bogus stuff. First, I tried putting in the control channels for the downtown tower in conventional mode, it gave me an error that said "Unable To Read EEPROM Mode". Then I tried putting in a bogus LTR system (I just typed in numbers), it gave me an error that said "Unable To Read EEPROM Mode". Then I tried putting in a bogus MOT system, and it gave me an error that said something like this "This Radio Is Not Motorola Compatible". So, I don't know why it won't take LTR or conventional systems, but I do know that the comp. and radio are communicating because it told me the radio wasn't MOT capible. Now I have a favor to ask to all of you who have GX 5800's that moniter STAR-Net. While turning your radio on, hold the group down button, and can you tell me what version your radio is? Thank You very much. My programmed radio says V2.20, while my unprogrammed ones say V2.10. The unprogrammed ones are completely cleared of memory (when I turn on the radio, it says "NO DATA"). So what I am thinking is, I can Flash Upgrade the radio to take MOT systems. I would just have to find the file to do it with (has anyone done this, or can it be done?). Also, is there any way of cloning the radios without having to go through a comp.? Thank You for your time.

The site is down for upgrades and a move to a more powerful server.
It should be available again once the new DNS information propagates
out.

I just heard some voice transmissions on 154.16, the old HFD pager channel. From the sound quality it may be a rebroadcast patch from another channel but it might be a repeater output. There was not enough traffic to figure out what the use is or to identify a tone. Signal was strong from near the West Loop and 59.

I did some DNS queries to the old trunkedradio.net, and found what server it was using, then made a query for radioreference.com. Once I had the IP address, I just plugged in the IP address, and got there.

I'm afraid that based on a query this AM, that the reason it was unreachable is because they were changing hosting companies. The IP I got was for the old host, and the new host had yet to propagate the changes. It's all fixed and working now, and I haven't looked for the new IP address (really not the best way to go anyway, since IP's are known to change - my domain, otsc.com, has pointed to 6 different IP's in as many years).

I don't even have that one programmed in anything. Guess I'll put it in for
those rare times.
HFD was using some temp repeater on 153.890 for running patches but I
haven't heard that active anymore so maybe they moved it to 154.160 MHz.
Will have to see if I can find out what is going on.

From: Myles Barkman
Topic: 8489  Message: 8499

OK, it looks like what used to be a repeater on 153.890 is now on 154.160 MHz.
Unknown if there is a PL tone on the output.

Is 154.160 MHz still used for some paging?

One HFD license shows a repeater on this frequency near Hwy 225 and Loop 610.
Height about 300' AGL and using 250W, 500 ERP.
Another one is listed at 61 Reisner at the Central Police HQ Building downtown about 430' AGL also 250W.

# 8505. OT- looking for crane company in N Houston or Conroe

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-10 18:06:12 UTC
From: houcwb
Topic: 8505  Message: 8505

Looking for a crane operating company to get a quote to remove a 90ft steel light pole (used as an antenna mast...see, I knew I could squeeze radio into this :) in Huntsville...already got a quote from Kirkland Crane but need some more (company rules ya know)...
I tried Urby Construction in Conroe but they seem to be gone...
anyone know of another company I can get with? If you do, please email me direct at cboone at gt.rr.com (which is the only personal email I can read at work)....
sorry for the slightly offtopic msg...(there IS a DB224 and Heliax on the mast...the type you see street lights on...90ft and three sections...this one has been there for 30+ years...and the landlord wants it gone since we now are ;)

Don't know who of you actually listen to the City of Houston 800 Motorola trunk but if you try listening the last week, you would notice it sounds much better than at least the last couple of years.
Not much interesting to listen to there except Houston EOC, IAD, Narcs and HMRT.
Although, I bet IAD and Narcs use mostly Nextel now.

Topic: 8511  Message: 8512

I've got it in my BC-250D, and have heard NARC on it a few times in the evening (although rarely - I hear it less than I hear the DEA TG's on StarNet), and keep the Public Works stuff out of it. I do also keep the EOC, "Epidemiology and Disease Reporting" and Houston Medical Strike Team groups in there for Just in Case (also, why waste a Trunked system with only a small handful of NARC and IA TG's).

Of course this is the same guy who has 3 banks of his scanner with StarNet in them (more TG's than one bank can hold.)

What city are these stations in? They are not in Houston.
Closest 97.5 is in Winnie and 103.7 is in Willis. Neither has good coverage
into Metro Houston.

This is a good question... I don't think so, but they might.
Cafe Artiste does (not too far away at W Main/Mandell), and Hollywood
Cafe does (but this is more of an "out there, we're here we're queer"
type of place, and some members may not feel comfortable there). Both,
however, require a minimum one item purchase (err "one drink" so between
$1.75 and $4.00 minimum at each).

I'll alter the meetup.com to reflect 2pm 4th sat of each month.
-Eric

From: Marvin Suggs
Topic: 8489  Message: 8525

I remember the HFD fire inspectors using 154.160 when they were staking out
fireworks stands, but that was several years ago.

# 8526. Hams in the group ? / Intro

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-12 22:33:58 UTC
From: Ben - ne5B
Topic: 8526  Message: 8526

Questions?
How many Hams/Amateur Radio operators are in the group?
of those hams What Houston repeaters do you frequent?

A little intro about me.
Became interested in Scanning and bought 10 channel programmable scanner back around 1987.
In 1994 I discovered Amateur Radio when I finally bougth a scanner that could scan across frequecy ranges.
Currently have Radio Shack Pro43, PRo94 and a newly aquried Pro83. Bought Pro 83 because the Pro43 wont work off battery pack anymore - only runs off AC.

First ran across Barnman's Frequency lists in Compuserve I think it was, or BBS in late 80s.

73 Ben - ne5B
PS: I'm on Digest mode on this group so I won't see replies to me via the group until the next digest comes out.

Got some info. Will post soon.
Many of the same amateur freqs used in the past are to be used this year.

Just a reminder that Kellogg Brown & Root 900 MHz trunk was not used last
year.
Instead, a UHF LTR system by Fleet Talk Services was used.
I don't have info for this year as far as that is concerned.

# 8532. RE: [HoustonScan] Hams in the group (and KLOL too!)

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-14 01:34:58 UTC
From: Chris Boone
Topic: 8532  Message: 8532

Well I might as well introduce myself to those who don't know me...

My name I think is obvious (my email gives that away :)
My amateur call is WB5ITT, licensed in 1973 at the age of 14 in Groves (next to Port Arthur).
Advanced class since 1974 (one day I may get the Extra)

Was a DJ and broadcast engineer in the BPT area (was asst Chief Egr of 560 KLVI in my freshman year of college) Built the first solid state rptr in the BPT area as well as the first autopatch covering Port Arthur (using a DTMF to rotary convertor I built!).....also put the first 220 rptr on in the area there...was involved with the Daisetta rptr system when N5DNG was alive and had it operational (we had them tied together and later put the first RF link between Bmt and Houston on using WD5KCX's 440 rptr as the Houston end)......in 1984, put the first ACC rptr controller on in Texas. Had it at the ARRL National convention in Houston at the hotel.....complete with an ID that said "Alert, this is not Echo 09!
Gunshot..." Some folks got a chuckle out of it then (you had to know club politics and the rptr situations at the time)
Later the rptrs I owned occupied the 440ft platform at Sabine Power Station in Bridge City...a 40ft coax run at most!

Mid 80s, got into telecom and 2way...worked at radio shops in Bmt and later became a telecom tech for GSU (now Entergy) in Conroe (Western Division HQ) in 1984. Was there until 1996 when I moved to Dallas and was an engineer for ABC Radio Networks (back to broadcasting again!)....then became Chief Engineer of two FM stations in Dallas.....
Lost job just before 9/11 and moved back to Houston still in broadcasting....as of July of this year, I am now a field telecommunications analyst for Centerpoint Energy (back to working for a public utility and doing telecom work...my how the circle completes itself :)

I have experience in all amateur bands 160m thru 10GHz.....two way radios of most makes and models and bands, fiber optics (OC48 SONET trained by Alcatel) and can splice the stuff too!, microwave radios, PBX systems (ROLM, Nortel, Avaya, and others), and now maintaining the Astro UHF mobile data system for the former Entex division of Centerpoint (whew!)
FCC Commerical licensed since the 70s, SBE member, ARRL life member and of course scanner nut :) (thru the folks at the McD's in Conroe for loop when I figured out their headset freqs using the IFR at work one night....talked back to them too! Hehehe ahh the fun days!) Have helped many rptr systems here in Houston and around the area....currently enjoying HF-6mtr all mode (mostly 6m SSB) remote base operation from 220 FM....

==========
==========

As for 103.7, etc, here is the breakdown for those not in the know:

103.7 has been bought by Cumulus Radio and is being upgraded to a full C (100,000watts at 2000ft) licensed to LaPorte (Yes it IS leaving Conroe...actually its licensed to Willis) and moving to a new tower south fo Devers...Cumulus also owns 97.5 (licensed to Beaumont and on a 2000ft tower in Winnie) and is dumping the Urban format for a ROCK format...Pat Fant, former GM of KLOL in its heydays, is the new Market Mgr for Cumulus Houston and will oversee the new Rock start up on 97.5 slated for mid Feb....EVENTUALLY, the format is supposed to move to 103.7 when it gets upgraded and 97.5 will get another new format......99.7 in Huntsville is moving down to Willis to take 103.7s place (Ben Amato who owned 103.7 and still owns 99.7 made 32 Million in the deal)....BTW did I mention I keep my toes in broadcast?? :)

Thanks, I'll get them a call asap.....yeah we will probably want to sell it to recover some costs of taking it down...the thing weighs about 5-7 tons....and is 90ft in three sections...May be good for the back yard if you can afford to put it up :) This one has been up for 30+ years and no problems..

# 8535. new Coast Guard UHF freqs

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-14 23:41:36 UTC
From: Myles Barkman
Topic: 8535  Message: 8535

Just found out that they don't use 381.800 MHz anymore.
Apparently, the new freqs are:
345.000 Primary Ops channel (Heard Ellington call this Comm-1)
237.900 Secondary Ops (could be what they called Comm-2)
326.150 Primary Air/Ground Working
379.050 Secondary Air/Ground Working

It so happens I get a pretty good birdie (no, not the kind with feathers) on
345.000 MHz in the house. Guess they didn't have to consult with me on
frequency approval.
The reason for the move is because of a new approved land mobile band plan
to be used in the 380-399.9 MHz area.
Any old freqs like 381.0, 381.7, 381.8, and 383.9 will no longer be used as
of Jan.1 2005.

Here's some more info on what they plan to do in that part of the spectrum.

Thanks for the update.

I heard cutters Manta and Manowar in a comm check (with difficulty)
on 345.0 AM, Friday night.

According to www.wunclub.com/ ,
Manta's home port is Freeport, and Manowar's out of Galveston.

Are you getting these with a wide band receiver,or a scanner, and if you are getting them with a scanner, which one are you using? I wouldn't mind monitoring this stuff (of course there is probably no traffic in my area in NW Houston), but all I have that monitor out of band stuff is a pro-95.

From: Myles Barkman
Topic: 8535  Message: 8543

These are just normal aviation band AM mode transmissions.
They just had to move out of the upper portion of the band.

You might be able to hear the helos on 345.0 MHz when they are up in the air.

I'm hearing activity on the Houston Two-Way Radio (a.k.a. Fleet Talk Services) TRS again this year. They appear to be using the usual rental radio talkgroups. So far I have activity on:
0-02-146
0-05-125
0-12-126 ?

The rental radio talkgroups are generally 0-xx-125, 0-xx-126, 0-xx-127, 0-xx-146.

Using a ICOM CPR-1000 wide band receiver .5 - 1300 MHz. PROBE1K software and a Toshiba Libretto computer.

Also have a ICOM R-10 handheld but not using at this time.

The PRO-95 is almost deaf out of band and the more out you go the worse it is. If the transmitter is not in your back door then you will not hear anything. Check out these guys for info on some good wide band receiver's. They are in England but been selling and shipping to the states for many years.
http://www.javiation.co.uk/

There are local dealers that can order these radios for you if you perfer dealing stateside.

There is a good possibility that with the right receiver and an outside antenna you might be able to receive the Coast Guard UHF frequencies, the VHF, don't think so.

From: Myles Barkman
Topic: 8332  Message: 8553

Ok, here's the ham freq lineup for the HP Marathon 2005:
First freq is primary, second is secondary.
Talk-in 146.660 146.880
Course 146.660 146.880
Timing 147.360 146.660
Transport 443.175 442.000
Leading pack 446.050 (simplex) 443.275 (simplex)
APRS 144.390 (AX.25 packet)
unassigned 145.170 443.650
5k run 146.470 (simplex)

The marathon starts at 7am Sunday and the 5k run starts at 7:20am.
The GRB opens at 5am so that's when most of the radio activity should start.

For all other related marathon ops, listen to the Fleet Talk Services LTR
trunk system.
You have to program these frequencies into a bank in channel locations
ending with the associated LCN order number.

02 488.6625
05 488.8125
08 488.9375
10 489.3875
12 488.6375
14 488.7875

I don't know all the talkgroups used for this event.
Just program in talkgroups for all the various home channels as Eric stated
in an earlier email.
0-xx-125, 0-xx-126, 0-xx-127, 0-xx-146.

There also appears to be a talkgroup used by the GRB on 0-05-106.

Thanks to Eric Carlson for his info on these business two-way systems.
You can see the info he has on the various talkgroups for this system here:
http://home.houston.rr.com/ecarlson/scanner/houston/houstontwoway.html

# 8557. Re: 311 fire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-16 04:49:18 UTC
From: scanfan02
Topic: 8549  Message: 8557

It was off of Kuykendahl and Rebecca Place. Did anyone catch the early morning Cy-Creek apartment fire, i didn't and was wondering were it was, they had the Red Cross make the scene for resources and were talking about how the building was clapsed on TAC-9. They had Cy-Fair and Northwest along with Champions fill in for their stations, so obviously all Cy-Creek apparatus was paged out.

So far, have heard these marathon-related talkgroups on the Houston Two-Way system:

0-02-125 Ambulances/EMS
0-02-146 5K/Wheelchair course

0-05-125
0-05-146 Course?

0-10-126 water stations?
0-10-146 GRB

0-12-125
0-12-146 Timing/Lead

Yeah, it was 1982 when I started posting your frequency lists
on my ACOM BBS (pre-internet days)... I think there are
quite a few old timers on here that might remember that or nearly
that far back. Sure is easier to find freqs nowdays with the
internet at our fingertips....

Let's see, you were writing about trains and working at that Port
Aurthur station???

I still have contact with several of the original RCMA crew.

# 8583. Re: [HoustonScan] Centerpoint Trunk Question

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-18 23:05:03 UTC
From: Myles Barkman
Topic: 8578  Message: 8583

I don't think I ever figured that one out either. But it's all a moot point since I think that talkgroup lineup changed a long time ago and doesn't match up with what is listed on radioreference.
Take a look at this list and see if the talkgroup labels seem to make sense with what you hear:
http://home.houston.rr.com/freqzone/freqs/centerpoint.html
I don't typically listen to the system unless my power is out and I listen to South Houston trouble, or switching and the dispatch channel.

Maybe someone more closely involved with those guys can give some insight...

# 8584. Liberty County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-18 23:58:22 UTC
From: Myles Barkman
Topic: 8584  Message: 8584

Anyone have some newer talkgroup information for Liberty County?
Someone over there is hearing them refer to "SO-1" and "TAC-2".
Are these talkgroups on STAR-Net or some other VHF frequencies?

Also, does anyone know what 155.535 MHz repeater is used for in Liberty
County?

Is Liberty County using STAR-Net or just the town of Liberty?

From: Debbie & Sly
Topic: 8585  Message: 8585

Don't forget everyone, there is a scanner "meetup" this Sat from 2-5pm at Agora's. Anyone on the list is welcome to stop by. Bring your "toys" if you wish.
BTW-it is dutch/on your own.

Also - for someone thats been there, can you comment (to the group) as for the atmosphere, prices on items, what they generally have to eat/drink and if there is a purchase required? Just so folks monitoring this group thats never been there can get an idea of what this place is like. (I've never been there either).

For a few reviews go to this link.

http://www.b4-u-eat.com/houston/restaurants/reviews/rsv2189.asp

AGORA A pocketful of dollar bills would serve you well here on a Wednesday night, when this usually relatively tame coffeehouse/bar opens up into a belly-dancing arena, complete with onlookers from all walks of life. As befits its name, Agora's overall theme is distinctly Greek, but what has made it work is the clash (friendly, mind you) of cultures that forces the place to so often elude definition. At night, the scholarly atmosphere that prevails by day turns boozy, yet the boozers and the perusers get along fabulously.

>
I'll start with the people that work there. The owners are Michael and George. Michael is usually there to open at 9am (he's also a retired airline captain so he might be amused by some of us listening to IAH or approach control). George takes over in the afternoon and closes at 2am. The hired help that work behind the bar are Katarina, Flora, Peter, and Hussein. All provide excellent service.

For the most part the place is self-service. You pick up a drink (beer, wine coolers, soda, fruit juice) from the cooler in the back and present it to the cashier for payment. For a sweet snack, they have baklava and finiki (if you don't know what these are, try them!) From behind the bar they can pour a glass of wine, or brew a cup of coffee or hot tea.

There's a one drink minimum purchase ... the owners do this to cope with schools kids (from Lanier and Lamar) patronizing the couches and chairs but not purchasing anything. A cup of coffee costs $1.89 including tax. Tips are appreciated. A bottle of imported beer will cost about $4. You can buy wine by the glass or bottle. They have a small humidor for cigar affictionados. One small TV downstairs, larger TV upstairs - both with Dish TV service. Because of the greek clientele, don't be suprised to see a greek language newscast on TV. The place can get smoky from pipes, cigars and cigarettes. There is a non-smoking section.

The jukebox there is fantastic ... an eclectic combination of old and new tunes.

Parking is terrible ... there are six parking spots in the back. Your best bet is to park across the street or around the corner. Pay attention to the warning signs: "No Parking" means just that. As previously mentioned, they host belly dancing performances on Wednesday nights; standing room only from about 9 or 10pm until close.

Before you think you're the first person to bring a scanner into Agora, let me say that STAR-Net and the FDC trunked systems come in reasonably clear. If you see some guy in the corner with a laptop and scanner - buy him a cup of coffee (yeah, like I need more caffeine) !

Hope this helps!

Regards,
Rick

Ahhh yes those channel tags make a WHOLE lot more sense. Thanks for the tip. You are right. It really isn't interesting listening, I just wanted to get it all in the scanner right so when the power does go out I may be able to make some sense of what's going on outside.

Thanks.

I'll tip my hat at Rick's commentary on the place (as well as his not needing any more coffee).

I'll most likely be there.
I'll be the fairly hard to miss guy carrying the pro-95. (Look for tall, huge/fat, glasses, and at least a little geeky).

Any particulars as to where we are intending to sit/meet?
I suggest outside. (and the first person that tells me to just listen for the scanners will likely find a pro-95 crashing down on their head. heh.)

Anyone else listen to the Aviation talkgroups on STAR-Net?
The "private" talkgroup for emergencies was 21936. Now all I hear on there
is an occasional call to contractors about maintenance.
Has there been any changes to the talkgroup functions lately?

Crosby has always been weak for me but I'm down here in Pasadena anyway.
Most all the other repeaters come in pretty good except Huffman (Fire 6) is
a bit weak for me.

OK, didn't get the clue about CCVFD in the subject.
We were talking about different Fire 3 repeaters.
This is something I wanted to point out to some IPN dispatcher.
I was noticing some pages that went out for Unincorporated Harris County
that only gave the labels like Fire 3 or Fire 6 instead of the actual
frequency.
This is confusing since Cypress Creek Comm Center and HCEC Comm Center both
use these labels.
Now that I look at it thought, Cypress Creek uses Fire labels 2-5 for their
repeaters and HCEC uses 9-15 for theirs so if I can remember that, I should
be able to figure out the difference.

As far as the original problem of not hitting the repeater, don't get me
lying, but they might have a really short squelch tail so you may be hitting
it just fine, it just isn't giving you much opportunity to find out.

As far as the location, looks like they have two sites, with one probably being a backup site.
So it is either at Louetta Rd and Grant Rd or Grant Rd and Jones Rd.
Only about 2.5-3 miles difference.

Got heavy fire in laundry room at some place working on TAC-9 451.425 MHz.
Keymap 369Q.

Sounds like you are not a member of Cypress Creek VFD.
If you are not a member, then why are you trying to hit that repeater?

Are you Authorized to use that Frequency?
Is it legal to key up on a frequency if you are not authorized ?

Even if you can kerchunk the repeater that is not a guarantee that your
transmission will be clear enough to understand.....

I thought this list was about scanning, not unauthorized transmitting.....

Well, it's home, after a lot of abuse and minus the wheelchair lift. Initial tests do look encouraging, though. It just so happens that HPD accidentally did something right and sent my van to an impound lot that had been saving a lift from a previous van auction. Now we just have to get everything running.

Yeah, if you plan it you should show up. But choosing some place that has no parking, very wheel chair Unfriendly, and if you over 25 you will definitely look like you don't belong is a poor choice. But the Chocolate cookies are pretty good!

# 8621. Re: [HoustonScan] Myles here at Agora at

Agreed on the showing up. Wish I had, but major sleep deprivation kept
me from it.
Parking is an issue, and I believe they were grandfathered beyond most
of the ADA, unfortunately...

Suggest someplace else, then, absolutely.
Personally, I'm all for Cafe Artiste (wheelchair friendly, parking is
limited, but not as much as agora, and there's a lot more (and safer)
street parking), next time.

# 8622. Packet Repeaters In Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-23 15:50:37 UTC
From: jrbobdobbs1@earthlink.net
Topic: 8622  Message: 8622

Does anyone have list of packet repeater frequencies in the Houston area? I have a couple, but would like to know more. I have searched the net and can't come up with any.

Thanks,
Jr Bob

Oops, assumed it was 610, it was I45.
Suspect in custody at 3441 McGowen.
They said he was fighting when they caught him but he's sitting in
the back of a shop now.

Anyone else experiencing long email delays from Yahoo Groups to their
email accounts, or specifically RoadRunner accounts?

For example:
Ben Worrell's email about CCVFD and my email from Agora's did not get
into my inbox for exactly 4 hours after they were posted to Yahoo.
There have been several more I have seen like that and even one from
Ed Lentz that took 12 hours.

You people need to speak up. An e-mail was circulated while planning this meetup ASKING for places to meet and NOBODY said anything. The only mention of places were the ones that had already been said (Agora's and Cafe Artiste). There seem to be a lean toward Agora's so that what was picked. Now, the next meeting is in one month. Lets get some ideas about a different meeting place!

Here are some things that I feel would be ideal in a meeting place- It should be somewhat centralized, fairly easy to get to or find. I think Sat afternoon seems to be a good choice as for the day. It needs to be a place where you seat yourself, a place that is somewhat noisy, as we have scanners going that'll need to be non obtrusive. It needs to be a place where people can come and go w/o necessarily having to purchase something just to get in or sit down. It should not be "packed" during our meeting time. Decent parking with handicap access. It does not necesarily have to be a coffee house either. A place that serves some sort of food would be nice, some may wish to eat a late lunch or early dinner. The more casual the better.

Let here some thoughts on meeting places.

East of downtown:
145.050 AI5TX-2
145.050 AI5TX-1 (mini bbs in the -2 digi tnc)
144.390 AI5tX-2 UI code runs in a tnc 2 clone

There is also DX Cluster on either 145.71 .145.77 or 145.79 I forget which, I could hear it from Beltway/Richmond area quite easily.

# 8628. Re: [HoustonScan] Myles here at Agora at

Topic: 8611  Message: 8628

Well, that about rules everything out in that area. Saturdays are not good for not crowded. I couldn't speak out for or against either place, because I'd never been to them. I'd say to try Katz's they have parking 2 floors with elevator and I've never been there when it was quiet. BUT that's an area with pretty over priced shops and restaurants so it will be hard to find a spot to meet the demands. I didn't say I'd be there because I work weekends, but after I broke the truck..... Well, I had some free time, And like Myles I wanted to meet some people.

# 8629. Re: [HoustonScan] Myles here at Agora at

From: Debbie & Sly
Topic: 8611  Message: 8629

I don't know where katz is but yea anything anywhere near the same area (Westheimer/Montrose) is probably not what we are looking for if thats all there is. For centralized I was more/less meaning some place within the loop. People in Alvin don't want to trek to Jersey Village and vice versa. I'm sure there is some possiblity of some place along (or just off of) the 610 loop. As for poss having the thing on a weekday well, evrything pretty much in gridlock from 4-7 or so.
Yea Sat is going to be a more busy day but should be not as bad during the middle of the afternoon. As opposed to 12 noon or 6-7pm. When I meant by "packed" there's no use in going to a place thats one person short of standing room only. Surely there is some restaurant or deli or coffee house, bbq place, etc along the loop that meets most of the criteria. No?

I can't believe that only 1 (or 2) people out of the 500+ on this list showed up.
Heck I get more scanner folks to show up at my local scanner meetings and I only have about 25-30 members!

Well Sly, it's sort of like I tried to tell you. This may be one of those ideas that sounds dandy but never quite works out. Just look at what happened to you yesterday. Debbie may miraculously feel differently about radios next month, but I rather doubt it. Besides, Debbie is one tiny example of what I call "real life." Even ham clubs have a hard time getting good attendance at their meetings. Everyone seems to agree such get-togethers are a good idea, but actually getting there is another matter. Life just tends to have other ideas. As for me, my van will probably be back up, but I'm unlikely to have another driver in a month.

For what it's worth, I disagree with some of your criteria for selecting a meeting spot. Why would we want a noisy place? Does your radio make you self-conscious? I don't have that problem with mine. Also, while I'm fortunate enough to have a 40-watt car amp backing up my radio and talking software, most hand-held radios are inaudible in noisy environments. Why would we want to have to shout at each other? I don't get that.

BTW, how does Debbie feel about sharing an email address for things she simply isn't interested in? Email addresses are pretty personal and a cinch to get, you know.

Katz's deli is about 2 blks east? Toward 45 for Agora. there's parking behind the building. About 20 slot, with 2-3 wide wheel chair van sized one's and about 30 across the street in another lot they have. The hard part is getting past the display case at the front. I generally avoid that part of town, so I don't know of another likely spot w/wo wireless service.

Good places to have RF related meetings:

Kelly's Restaurant, near Hobby Airport (Park Place) - has carpet so you can actually talk to each other.

Dixie Diner - Near Aiport Blvd - I think it has wireless internet for free

The Dot Diner - 45 near south loop - Always a good breakfast spot

Any Luby's that serves breakfast - No problem with seperate tickets there - normally has a seperate meeting room, if not reserved for some other group.

U of H University Center - Large Cafeteria that normally does not have many students on Saturdays.

Spanish Flowers - On Main near 45 (Heights) - Lots of good large tables and good food. Open 24 hours.

59 Diner at Shepard

Barnaby's near montrose

Mama's Cafe on Westheimer

I do not think any of us would feel out of place at any of these locations.

RBC

The Pig Stand - Washington near HPD - Great breakfast and lots of parking

Harry's Cafe - Tuam near Westheimer - Great food and lots of room to meet. Servers Steam plate breakfast.

Can I suggest Star Pizza at Washington and Heights? They've got the side room and the patio, it's handicapped accessible, plenty of parking. Also, easy access from the Katy freeway, Allen Parkway and Memorial Drive.

Only problem is it doesn't have wi-fi, but I could always aim my repeater across the street (my apartment's across the street). ;)

Why not just in a parking lot somewhere? Like office buildings or shopping centers? That way you don't have to worry about being to noisy and what not.

If you must have food.. order pizzas... put your money together... and pay for it...

I don't know about specifically RR acounts, as I don't use any others
for my yahoo groups. However, I've experienced up to twelve hour
delays, before. I approved someone for membership in a group I
co-maintain, yesterday, and didn't receive the "new member" message
until around twelve hours later.

it's getting worse and worse.
How are the houstonscan.com mailing list(s) coming, does anyone know?

A lot of places in central that fit out bill, you'll find, will want at least the purchase of a cola, or something of the sort.

I'll call West Gray Cafe (who is familiar with hosting meetup groups) and see if they have a problem letting us use their back room, with the scanners going (They may insist on the upstairs. I don't believe they have an elevator, so that would be out in that case, but I'll see what I can do). They're a resteraunt - for those who aren't familiar.. general food, and as far as I know they do not require a purchase. They're located on W. Gray Street, nearish Taft. (If anyone is familiar with Biba's "One's a Meal," then W. Gray Cafe is almost next door.)

Dixie is not near Airport, unless they have a new location... They were formerly near 45 and the South Belt (just on the south side).

I'd go for Dixie and/or Dot. IHOP wouldn't be too bad, Kirby and 59 (centrally located, right off the freeway, reasonable with groups, at that time of day on a sat, no big issue finding room, wheelchair friendly, lots of parking). Never eaten at the others.

You'll lose me, there.
I've refused to go to Star Pizza since they put Sattelite Lounge out of business. (When they moved in next door, they owned the parking lot, and started towing Sat. Lounge customers, even after Star hours. Sat. Lng. had to close down due to lack of parking).

HPD gets suspicious when a bunch of people with electronics are gathered
- trust me.

Aside from that, however, it's not too terrible an idea, except for
temperature and weather issues.

# 8641. Re: [HoustonScan] Myles here at Agora at

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-24 04:20:26 UTC
From: Debbie & Sly
Topic: 8611  Message: 8641

Well Mr Scott and the group:
Thanks for the input and your opinion is valued but personal attacks on the matter are uncalled for. Instead of poking at me and my wife and putting a damper on things lets hear something positive/constructive about what you think would be a good place. Where would you like to go Scott? How can you "better" this idea or the group?

The whole idea about this "meetup" is to make friends with folks in the same hobby in the same town, get to meet the face behind the keyboard, exchange ideas, tips or freqs, a place where a newbie can come to ask questions, show off a new radio or whatever. More/less an ""eyeball" extention of what this group is about. If you make it, great! If you don't well thats ok too, see you next time. Yea I know I got the ball rolling on this idea, I'm trying to get the group pumped up and interested in the matter so maybe we can make something out of it instead of letting it fizzle away.

Personally I do plan on making future visits myself, I'd like to meet some of you guys down there. I don't plan on making all of them and I supposed you don't either as well as many folks on this list. I was a little suprised though with the initial response a couple weeks ago when setting this thing up and then there was virtually no turn out out of the 500 members on this group, but so be it. Its just the way the cards fell this time. We'll try again next month.
I initially planned on coming but several little things came together at the last moment and decided it was best not to come this time.

No I do not have complex about having a scanner with me. Nearly everywhere I go I'm packing, in fact nearly everytime I (we) eat out I have one or two I bring with me and set them on the table with them turned up just enough to where I can hear them.

As for a noisy place, your taking my suggestion to the extreme, yea I wouldn't want a place so noisy that you to yell to the person next to you or have your handheld on full volume just to hear barely it. I mentioned a noisy place mainly in opposition to a quiet place so folks that brought a radio or if we got a little loud we wouldn't be as likely to disturb other nearby patrons. There's no need to be obnoxious with the radios and having other folks turn around and give dirty stares or have the manager come over and get onto us cause someone got their radio turned up to where its disturbing people 5 tables away. Therefore a place with some noise and/or a place thats spread out I feel would be a little better adapted. Here again thats my opinion. However maybe a quiet, "close-in" place would be best?

BTW-Debbie has her own private e-mail, this is actually my e-mail acct, its just what this account happened to be named. FWIW- She is looking foward at some point in time in going with me, no she won't be at the meetup, she'll do some shopping while I'm over there.
Hope to see ya'll at the next one.

Also- For those of you are hams, a "talk-in" repeater frequency would be nice.
Maybe we could get two meeting spots one south, one north and rotate monthly, hey its an idea.

A place that seems to be popular I've noticed in the past with some other scanner groups is Fuddruckers. You don't have to eat their food if you don't like, you don't have to buy anything to come in, people can come and go, you can sit where you want, casual atmosphere, some have outdoor sitting areas (I think), not too noisy not too quiet. One of the "Willie's" restaurants might be ok too.
Sly

I'm not totally sold on a place where you have to be seated, If thats what these places do. I know IHOP does. What do you do if a group of folks come late, (not everyone is going to show up right at the start) how do you sit together or next to then? Same thing with a reserving a meeting room or large table, I hate to reserve such and only 2 people show. Or the opposite, a meeting room or table for 12 and 25 show up.

I know some of you folks know these places well, you probably know better than I do if any of these places fit this description.

BTW -Thanks for the ideas folks! Keep 'em coming!

I was about to send out a similar email. I thought star owned the property and refused to renew their lease though. It was really too bad, Star Pizza is nice, but I refuse to go their since they put one of the few good venues for music in Houston out of business.

IHOP would be allright at kirby/59. They have a non-smoking room that
is normally not used at that time of day. We shouldn't have a huge
problem, if we talk to management, beforehand... I know several of the
waitstaff, and one of the managers, so I can see. Telling them flat out
that we're hoping for 10 - 15 people, but we may only get a very few,
should be fine. They will normally work with seating around you,
leaving a generally decent-sized area availible should others show.

Other places that I KNOW are willing to work are up in Humble, though..
so that's out at the moment.

# 8645. RE: [HoustonScan] Scanner meeting Suggestions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-24 05:11:38 UTC
From: Michael W. Jones
Topic: 8632  Message: 8645

I'm sorry about that. Only having lived in Houston for 11 months (to the day), I still don't know the back stories of some of these venues (except what's on Marvin Zindler's "Rat and Roach and SLIME in the Ice Machine" report).

I am planning on attending a few of these myself, especially if Chris Boone shows up, since I've known him for 4+ years because of a mutual friend in Atlanta (I was in Kansas City), and I've never met Chris face to face.

The Kansas City Scanning Yahoo Group actually did have a couple of get-togethers, but not at a restaurant/coffee house. The only one I remember (and actually went to) was coordinated with the Kansas Highway Patrol and the city of Olathe's Police Department. The Highway Patrol showed us their major accident response/reconstruction vehicle, and the Police Department showed us their 911 dispatch center and CAD. If I remember correctly, we had 15-20 people show up. (For those interested, Olathe is a community of 40,000+ on the fringe of the Kansas City metropolitan area, and one of the few communities not dispatched from the county Fire/Police/EMS dispatch center.)

# 8646. Re: [HoustonScan] Scanner meeting Suggestions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-24 07:45:21 UTC
From: Rick Parrish
Topic: 8632  Message: 8646

Eric Scalf wrote:

>Dixie is not near Airport, unless they have a new location... They were formerly near 45 and the South Belt (just on the south side).
>
>
Eric ... Dixie's Diner has multiple locations ... there is one near Hobby Airport off of I-45 and Airport Blvd. and another near Ellington Field off of I-45 and Dixie Farm Road. There may be other locations but these are the two I know. Dixie's might make a good choice because they have a back room with a door; would have to reserve in advance. I've seen several MLM organizations like Amway use the back room for meetings. As for reserving a room, I may know someone who works there ... I'll ask the next time I'm in the area. The Dixie Farm Road location used to sponsor a classic car show in the parking lot on Saturdays. Don't know if that is still the case ... if it is, I wouldn't suggest meeting there on a Saturday.

phulesau wrote:

> Yeah, if you plan it you should show up. But choosing some place that

Mmmm ... cookies! The access ramp is in the back. May not be obvious, but it's there.

> I'd say to try Katz's they have parking 2 floors with elevator and
> I've never been there when it was quiet.

This is a great choice ... parking, central location, wheeled access, and food! I'm sure Barry Katz wouldn't mind us camping out. They are also "outlet friendly" if you have something like a laptop or scanner that needs to be plugged in - just be sure to ask first.

Eric wrote:

>I'll call West Gray Cafe (who is familiar with hosting meetup groups) and see if they have a problem letting us use their back room, with the scanners going (They may insist on the upstairs. I don't believe they have an elevator, so that would be out in that case, but I'll see what I can do). They're a resteraunt - for those who aren't familiar.. general >food, and as far as I know they do not require a purchase. They're located on W. Gray Street, nearish Taft. (If anyone is familiar with Biba's "One's a Meal," then W. Gray Cafe is almost next door.)
>
Another option almost next door to West Gray Cafe is Cafe Byzantio. Like

Agora, it has a Greek atmosphere. Wheel chair ramp is right up front. Decent parking (you can park at the house next door). They have a full service bar, a small grill for making hot food (like Gyros and grilled sandwiches), lots of electrical outlets, *free wireless access*, a decent juke box, and an open air patio. Exact location is three houses east of the West Gray / Taft intersection on the south side of West Gray.

The Byzantio staff consists of Louie - the owner, Dora - the manager and overall very nice person. Sarah and Fotini (Dora's daughter) work behind the bar. Sarah looks greek, but isn't ... which confuses some of the greek speaking clientele (like when they try to order something in greek which she doesn't understand).

Regards,
Rick

# 8649. RE: [HoustonScan] Scanner meeting Suggestions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-24 20:06:56 UTC
From: Scott Royall
Topic: 8632  Message: 8649

Now you're starting to actually think things through, which is what I was trying to get you to do yesterday. If the goal is really to mingle and meet the people "behind the keyboard," I'm not convinced that an eating place is the best choice because of the seating concerns you just mentioned. In good weather, why not a park? Doesn't that address a lot of the potential annoyances? I also considered libraries, but a group with blaring scanners might quickly wear out their welcome there.

No Sly, I don't do personal attacks. I do, however, challenge underlying assumptions that I don't think are valid. I don't think people with scanners have to meet at noisy places. Of course, if the desire is for food and refreshment, that's different. But, I don't think we need to be inconspicuous to meet each other.

Come to think of it, why not the UH University Center Underground? The atmosphere there is so laid back on weekends that it's virtually comatose. You could get away with much there. (And, scanners do work surprisingly well there despite what the name suggests. They worked there when I was attending UH 20+ years ago. Also, UHPD depends on STARnet now so obviously 800 megs works there.)

Subject: Re: [HoustonScan] Scanner meeting Suggestions

I'm not totally sold on a place where you have to be seated, If thats what these places do. I know IHOP does. What do you do if a group of folks come late, (not everyone is going to show up right at the start) how do you sit together or next to then? Same thing with a reserving a meeting room or large table, I hate to reserve such and only 2 people show. Or the opposite, a meeting room or table for 12 and 25 show up.

I know some of you folks know these places well, you probably know better than I do if any of these places fit this description.

BTW -Thanks for the ideas folks! Keep 'em coming!

Dixie is not near Airport, unless they have a new location... They were formerly near 45 and the South Belt (just on the south side).

I'd go for Dixie and/or Dot. IHOP wouldn't be too bad, Kirby and 59 (centrally located, right off the freeway, reasonable with groups, at that time of day on a sat, no big issue finding room, wheelchair friendly, lots of parking). Never eaten at the others.

Has anyone thought about meeting at Memorial Park at the picnic table areas?

The Park is very peaceful, beautiful, nature trails, has restrooms, lots of parking, ADA van wheel chair parking spots, and free to all. This is a perfect place for you to bring your scanners for a morning or afternoon meeting just hang out and relax (no stress whatsoever). Just bring your coffee thermos, some donuts and favorite lawn chair. However, someone might mistake us for the local police.

Joe

That sounds nice if the weather cooperates. Next month might be too cold
(for Houstonites) or rain.
If nice, maybe we could do some Geocaching too!
Bring your GPS!

Has anyone thought about meeting at Memorial Park at the picnic table
areas?

The Park is very peaceful, beautiful, nature trails, has restrooms,
lots of parking, ADA van wheel chair parking spots, and free to all.
This is a perfect place for you to bring your scanners for a morning
or afternoon meeting just hang out and relax (no stress whatsoever).
Just bring your coffee thermos, some donuts and favorite lawn chair.
However, someone might mistake us for the local police.

Joe

That sounds nice if the weather cooperates. Next month might be too cold (for Houstonites) or rain.
If nice, maybe we could do some Geocaching too!
Bring your GPS!

I was about to send out a similar email. I thought star owned the property
and
refused to renew their lease though. It was really too bad, Star Pizza is
nice, but I refuse to go their since they put one of the few good venues for
music in Houston out of business.

# 8659. February Meetup...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-25 06:56:54 UTC
From: Eric Scalf
Topic: 8659  Message: 8659

Folks,

Need to nail down a location for the Feb. meetup within the next week or so, so that I can update the meetup.com website with information (info emails go out two weeks in advance). If you have a good idea of where you'd like to have it, reply to this message and let us know. Sly and/or I can slap a poll together of them and we'll take the winner?

Just a thought.
Sly, it's your ballgame on the list, so if i'm infringing or moving too fast, feel free to whip me with an antenna or two.

-Eric

maybe you all could meet at someone's home, that way you could have all the scanners full blast and also view that person's listening post. different home every month. and send out for pizza.

I don't know where katz is but yea anything anywhere near the same area (Westheimer/Montrose) is probably not what we are looking for if thats all there is. For centralized I was more/less meaning some place within the loop. People in Alvin don't want to trek to Jersey Village and vice versa. I'm sure there is some possiblity of some place along (or just off of) the 610 loop. As for poss having the thing on a weekday well, evrything pretty much in gridlock from 4-7 or so.
Yea Sat is going to be a more busy day but should be not as bad during the middle of the afternoon. As opposed to 12 noon or 6-7pm. When I meant by "packed" there's no use in going to a place thats one person short of standing room only. Surely there is some restaurant or deli or coffee house, bbq place, etc along the loop that meets most of the criteria. No?

I can't believe that only 1 (or 2) people out of the 500+ on this list showed up.
Heck I get more scanner folks to show up at my local scanner meetings and I only have about 25-30 members!
Sly

pappa's bbq on the sw freeway near Hillcroft is a great meeting place too,
with an upstairs meeting room, plus you can push tables together.

From: Frank
Topic: 8632  Message: 8663

If you're worried about the police getting onto y'all in a parking lot, call the store there and ask permission. Or just meet at like a Walmart or something, they're 24 hrs.

Also, if you're worried about seating, call ahead and ask them to reserve some spaces or a room.

It's not that hard to set these types of things up. You just need to be compliant with the store/resteraunt owners. Just ask permission and let them know what you plan on doing.

Hell, I am part of a truck site and they meet multiple times a month. They meet at a Sonic drive-through. That's not a bad idea, just hang out, no noise restrictions, wheel-chair accessible, FOOD, and some are open 24 hours.

Hope y'all figure it out..

# 8664. Re: [HoustonScan] Myles here at Agora at

not a bad idea, but not that many people would neccisarily be interested
in opening up their home to a lot of "strangers," I wouldn't think.

# 8665. Squeaky Tones

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-25 22:02:10 UTC
From: Parker, Melinda
Topic: 8665  Message: 8665

I get 2 squeaky tones on some Cy_Fair frequencies. Then the scanner moves on to scanning again

What are they and how do I get rid of them. Is there a tone setting I need to set?

Channels are

462.050

467.050

461.325

461.950

466.950

API is gone now. Sgt Don may be retired now but not sure. Since I don't do the night rides anylonger and he switched to days, I have no idea if he is still working. ME's office made changes and we had to stop that also.

Intresting reading the problems of getting a meeting setup. We did what, three statewide RCMA meetings. I think it was more fun back then also, too many experts nowdays. Also back then we didn't have all this Homeland security crap to deal with either. Robert is in Austin, lost track of Phil, and I think Greg is still in Rusk. Gene still runs the streets at night and even has a STARNET radio issued to him.

The most simple thing for them to do is meet at a park or parkinglot and bring pizza, sandwiches and refreshments. Also a Luby's on Gulf Freeway@Telephone is not busy a central location. Heck of a lot eaiser to get to than enywhere in Montrose. Trendy places are always a pain in the rear.

Easy to find the guys with the scanners, 12V auto battery on belt, handheld scanners in both hands and a 8 element beam on their ballcap.

# 8668. Re: [HoustonScan] Squeaky Tones

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-26 00:48:03 UTC
From: Myles Barkman
Topic: 8665  Message: 8668

I think that is part of the identification signaling on the radios.
There is nothing you can do to get rid of it.
At least it is not as annoying as the MAST data that HFD used to transmit on
UHF all the time.
I know someone else can confirm what the tones are. I don't usually listen
to Cy-Fair.

# 8673. Danbury FD/EMS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-26 20:52:24 UTC
From: Josh W.
Topic: 8673  Message: 8673

Caught Danbury EMS a litle bit ago on 154.250. Unfortunately, they didn't hang in there long enough for me to catch a PL. Sounds like they're using simplex and being dispatched by Brazoria County. They also have a weird little fast Morse burst that goes off after each of their dispatches, in addition to the regular station ID.

Listen to 97.5 already. I've heard stations do this silly construction noise ("pardon our mess") before when they were about to launch into a new format.
KRWP, The Power 97.5 in Winnie (eastern Chambers County) is about to be an Adult Oriented Rock station.
I don't think they get to take Clear Channel's KLOL callsign with them from 101.1 though.
Walton and Johnson and Outlaw Dave and someone else from KLOL are supposed to be on this station for awhile until 103.7 gets there tower up and running between Devers and Winnie.
I was excited at first when I saw that the new 103.7 application was licensed for La Porte since it is so close to me but that just must be where they are licensing the station to.
Hopefully it will get out better that 97.5 which I can't get on our radio at work near Tidwell and 290.

# 8676. San Antonio EDACS system help

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-27 16:21:58 UTC
From: tom22549
Topic: 8676  Message: 8676

According to Radio Reference, the private key feature of the San Antonio Provoice system has not been in use since December. Most of the police and fire talk groups are shown to be in digital mode on their lists. Are there any scanners which would be able to receive and decode these? If so, what would be a good model to get/use.

I have a Pro-92 and I can track the analog groups but get nothing from the others. I may not have it set completely correctly either.

Thanks,

Tom

i was in S A in december. the controll channel is encriped. i tryed
listining with a pro 96 and a bc 296d nether worked. i do no that there are
two systems the blue and the gold . the police are the only ones that use
the blue. sanantonio pd agency code is 02-xxx. i spent 3 days there trying
to monitor all it gave me was a head acke.but i was able to monitor every
thang elese.

tom22549 <twfitz@...> wrote:

According to Radio Reference, the private key feature of the San
Antonio Provoice system has not been in use since December. Most of

the police and fire talk groups are shown to be in digital mode on
their lists. Are there any scanners which would be able to receive
and decode these? If so, what would be a good model to get/use.

I have a Pro-92 and I can track the analog groups but get nothing
from the others. I may not have it set completely correctly either.

Thanks,

Tom

There is no scanner that can monitor ProVoice digital audio. See this
link for details on the San Antonio system:
http://www.radioreference.com/modules.php?name=Forums&file=viewtopic&t=12022

# 8682. RE: [HoustonScan] San Antonio EDACS system help

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-27 18:30:15 UTC
From: Scott Royall
Topic: 8676  Message: 8682

I'm sorry, I know what you're saying, and it's currently true. However, it cannot stay true. That's just in the nature of encryption. Any encryption a person can dream up can be studied and understood by others. The military deals with this reality by changing keys before each mission, (in digital communication, a key is just a very large string of numbers used to encrypt or decrypt) but public agencies with thousands of radios in use virtually can't change keys. Remember that, since a key must stay secret, it can never be transmitted. Someone with the key must touch each and every radio to enable it for use. That's why encryption is impractical for daily use on large systems.

What I'm saying is that we're entering the age of the software-defined radio. The kits already exist. All someone needs to do is study systems like ProVoice, and then write the code to decrypt them. That's no easy task, but it's guaranteed to happen whether the scanner makers do it or not. Of course, decryption does run afoul of the ECPA, but the RIAA is discovering just how tough information is to suppress.

Topic: 8676  Message: 8683

Like everybody has already stated, SA Public Safety is on an ProVoice capable system with the added ESK function, which is currently shut-off. From what I have gathered/ heard ESK is enabled to drown out interference from Corpus Christi's system. When ESk is enabled you won't hear any digital/ or analog talkgroups on this system. I don't know all the intricate details of the inner workings of this system, but all digital talkgroups are ProVoice provisioned, SA Police, SA Fire/EMS, and Bexar County S.O.'s. No scanner can monitor those, nor is there an time frame for an scanner being produced to do so, if there ever is one made to do it.

Like it was said, www.radioreference.com under the Texas Forums have all you will need to know about the why's and cant's.

Most everybody else in the county still plays around on VHF, for what that is worth, including the vollie FD's.

From: Myles Barkman
Topic: 8684  Message: 8685

You never know what is normal with STAR-Net.
I'm going to assume you were listening to the Clodine site from Katy.
Anyone with a SmartZone 2-way radio that is tuned to the Brazoria County SO talkgroup will let you hear that talkgroup.
It could be a patrol unit, a supervisor, or someone off duty that wandered into your area.
It could even be a non-approved user, a wrecker driver, or even a DPS trooper that is scanning that talkgroup.
Thing is, since you are just listening with a scanner and not a real 2-way radio, there is no guarantee that you will always hear activity on that talkgroup all the time, even if they are using it down in Brazoria County.
You are relying on someone with a 2-way to let you hear the talkgroup on the site you are listening to.

So what is OTAR (Over The Air Rekeying)? That's the noise you hear on some
Federal freqs like ATF, DEA, Customs for their DES.
How does that work if they are not actually transmitting the key?

# 8687. RE: [HoustonScan] San Antonio EDACS system help

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-28 00:23:31 UTC
From: Michael W. Jones
Topic: 8676  Message: 8687

I'm not familiar with it, but I'll take a stab at it, since I'm familiar with a system we use in my employment (wireline communications).

Each radio and repeater has a common key that is configured when the radio is configured. Each radio and repeater also has a unique key (read serial number). The OTAR transmits out a packet that identifies each radio by their unique key, and passes the new common key.

If a radio is stolen, it's unique key is taken out of the OTAR, and the radio is effectively dead (since it doesn't know the new common key.) Since the OTAR is encrypting the new common key based on the unique key, a hacker couldn't just catch the next OTAR and try to decipher the key, without knowing the unique key of one of the other, still valid, radios.

# 8688. RE: [HoustonScan] San Antonio EDACS system help

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-28 00:45:46 UTC
From: Scott Royall
Topic: 8676  Message: 8688

You're warm. Each radio knows the private key that is needed to decrypt the OTAR key. That way, exposure is minimized to the rekeying period.

Cell phones are different in that they are indeed accessed individually. If the system doesn't like your EIN, it's goodbye.

---

Sent: Thursday, January 27, 2005 6:24 PM
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] San Antonio EDACS system help

I'm not familiar with it, but I'll take a stab at it, since I'm familiar with a system we use in my employment (wireline communications).

Each radio and repeater has a common key that is configured when the radio is configured. Each radio and repeater also has a unique key (read serial number). The OTAR transmits out a packet that identifies each radio by their unique key, and passes the new common key.

If a radio is stolen, it's unique key is taken out of the OTAR, and the radio is effectively dead (since it doesn't know the new common key.) Since the OTAR is encrypting the new common key based on the unique key, a hacker couldn't just catch the next OTAR and try to decipher the key, without knowing the unique key of one of the other, still valid, radios.

Mike Jones

Heights

So what is OTAR (Over The Air Rekeying)? That's the noise you hear on some Federal freqs like ATF, DEA, Customs for their DES.
How does that work if they are not actually transmitting the key?

# 8693. Re: Squeaky Tones

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-28 06:57:45 UTC
From: abhawthorn
Topic: 8665  Message: 8693

I may be speaking out of turn here, but I believe that the units dispatched by the 1960 Communications Center (Cypress Creek, Klein, Spring, etc.) are using MDTs. At least, I believe Cypress Creek EMS is using a Kenwood MDT (I saw them while doing clinical rotations on their ambulances this summer) which is not as comprehensive as the Motorola MDTs that Houston PD/FD uses. I suspect you might be hearing data being shipped back and forth between the MDTs and the communications center.

While scanning their channels this summer, I, too, heard what sounded like brief data bursts on one of their channels. It was brief and only happened when they dispatched or made a verbal status change (on scene, enroute to hospital, etc.).

Andrew

# 8694. Help with Smart Zone

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-28 19:10:28 UTC
From: gtmustang9814
Topic: 8694  Message: 8694

Myles,

I like your new site at www.houstscan.com. Here is my question I live in Huntsville attending Sam Houston State. I used to moniter the smartzone system in houston during high school. I just found the following 2318-20 Huntsville 1. Located east of Huntsville off US190 about 1.5 miles west of Phelps.
856.2125c, 857.2125, 858.2125, 859.7125, 860.7125

2318-21? West Huntsville 2. Located about 10 miles west of Huntsville off Hwy 30. (300' DPS tower)
856.4875, 857.2375, 857.4875, 858.2375, 859.4875

I have programmed in 856.2125 and recieving the link yet when i put on my trunk button on my scanner. next to the M TRUNK there is a black dot. Saying it needs a repeater? I am using a bc 780 xlt? DO i need to program in a repeater?

Thanks,

Grant

# 8695. RE: [HoustonScan] Re: San Antonio EDACS system help

Yahoo group: HoustonScan (2005 — 2006)

# 8696. Re: [HoustonScan] Help with Smart Zone

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-28 23:27:33 UTC
From: Myles Barkman
Topic: 8694  Message: 8696

I also have a 780 but am not familiar with the "black dot".
Don't see one on mine and don't know what it could mean.
It has nothing to do with repeaters, that's for sure.
You just need to hold the Trunk button down while on that channel (856.2125)
until the M appears, and then hit Trunk until the word "trunk" appears.
Also go into the menu and make sure the trunk settings are set so Control
Channel Only trunking is on.
Then search the bank that channel is in and talkgroups should pop up.
You may not hear much up there though. I'm not sure there are any Walker
County users on the system yet.
Haven't heard any reports of any so far.

When ever a Cy-Fair VFDunit transmits a 400msec burst is sent to identify the radio transmitting. It is known as "Automatic Number Identification" or "ANI". We have a special "Decoder" in the Dispatch center as well as some of the radios are able to decode and display it.

If you are a ham operator, it sort of depends on where you are. RACES typically does the storm spotting around here although the usual 146.840 repeater has been down for months now.
Many times, the weather nets are held on the Saltgrass repeater link system, for Houston, those frequencies are 146.920 and 443.825 MHz, both with 103.5 Hz PL tones.
There are other frequencies in surrounding areas for broad coverage.
Don't know how you get involved if you are not a ham.
May contact the National Weather Service at 281-337-5074 and ask to speak to Gene Hafele. He is the local NWS Warning Coordinator.

As far as Skywarn classes, here is a link to the class schedule for 2005. It changes so keep checking to see if one gets scheduled near you.
http://www.srh.noaa.gov/hgx/severe/skywarn/schedule05.htm

Myles,

84 sort of works. I had a VHF packet radio at the same site as 84. The real problem is, the noise floor on VHF is so high, it takes a large signal to overcome the noise, and get "in" to the receiver. We finally gave up with the packet stuff, and moved it to another site, after several months of trying to get the problem resolved.

Of course there could also be other problems with the 84 gear, further compounding the issue. The Saltgrass stuff is on other building and seems to work really well -- especially the 443.825 radio.

) ) You will be assimilated... oooh, coffee!!

# 8703. Poll

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-29 17:23:38 UTC
From: Debbie & Sly
Topic: 8697  Message: 8703

Ok folks I have created a poll with all the suggestions of meetup places that were mentioned. I sifted though the e-mails and there were 20 places suggested. I have also included the basic location (that was listed with the suggestion) where the place is if applicable. The poll runs thru Wed (5 days) so people that may not check their e-mail very often will have a chance to vote too.
I would like to add that whatever place is decided on and that whoever has contacts or knows the people that work at that place would call and make the necessary arrangments. That is if applicable.
The poll is open to all on this list!
Thanks for your participation!
(Poll will be on the next e-mail)

Topic: 2083  Message: 8704

Enter your vote today! A new poll has been created for the
HoustonScan group:

Where would you like to have the next
Houstonscan meeting at? You can vote for
one or more choices.

o Katz-East of Agora's
o Kelly's restaurant-near Hobby
o Dixie Diner-near Hobby/near Ellington
o Luby's-I45 & Telephone
o U of H underground
o Spanish Flowers-main & I45
o 59 Diner-Shepard
o Barnabys-near Montrose
o Mama'a Cafe-Westheimer
o Pig Stand-Washington near HPD
o Harry's Cafe-Taum & Westheimer
o West Gray Cafe-W.Gray & Taft
o IHOP-Kirby &59
o Cafe Byzantio-next to W. Gray
o Memorial Park
o Someone's House
o Pappa's BBQ-SW freeway & Hillcroft
o Sonic
o Some parking lot
o Dot Diner-I45 & S loop

To vote, please visit the following web page:
http://groups.yahoo.com/group/HoustonScan/surveys?id=1624306

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

# 8705. What does HVAC stand for?

Yahoo group: HoustonScan (2005 — 2006)

# 8717. antennas

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-01-31 07:20:34 UTC
From: b6876
Topic: 8717  Message: 8717

I apologize that this is a little off topic.

Does anyone know where I can pick up some 2.4GHz antennas similar to
these locally?

http://www.hyperlinktech.com/web/antennas_2400.php

I need them for WiFi interface.

Thanks!

# 8729. Katy VFD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-03 17:00:27 UTC
From: Thomas
Topic: 8729  Message: 8729

Is 151.115 the ONLY way to hear Katy's VFD?

I would think that they are on the Clodine system as well, just like Westlake and West I-10.

Thanks!

# 8730. Re: [HoustonScan] Katy VFD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-04 00:44:36 UTC
From: Myles Barkman
Topic: 8729  Message: 8730

Yep, as far as I know. Katy PD and Katy ISD PD are both on STAR-Net but the VFD is not run by the city (hence a VFD) so they opted not to join the system. Perhaps a money issue.
Anyone with some inside info?

Myles

# 8734. Cruise ship freq

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-05 15:13:21 UTC
From: Myles Barkman
Topic: 8734  Message: 8734

Hearing a cruise ship repeater on 457.575 with PL 114.8 Hz.
Pretty good signal. Don't think it could be from Galveston.
Isn't there a dock somewhere around Morgan's Point or somewhere in the
Houston ship channel?

Speaking of cruise ships, just heard EMS rolled out to the Grand Princess cruise ship docked off Harborside for two patients, one with back pain and another with abdominal pain.
Talkgroups heard are 51472 for EMS and 53072 for cruise ship docks.
Maybe they were partying too hard for Mardi Gras.

Sure seem to get a lot of injuries on these cruise ships.

# 8736. Galveston PD Swat

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-05 22:32:21 UTC
From: Myles Barkman
Topic: 8736  Message: 8736

Wasn't sure if I was hearing some training exercise or what but just heard
the end of a barricade situation with Galveston Swat involved, TG 56464.
They have the guy in custody but before that, they mentioned he fired a shot
to the north and was holding a dog out the window. They are clearing the
rest of the building now.

From: *Bill
Topic: 8734  Message: 8738

457.5750 Mhz 114.8 Hz might be one of the following....

NCL Norwegian Sea or the Princess Lines Golden Princess

Not sure who is in Houston PORTS this weekend.

Not only Cruise Ships use those channels, might be a Cargo or LNG

check out
http://home.earthlink.net/~ecps92/cruise_ships.htm
for some great links and resources for Scannists
and Harbor Cams.

Let me know if it's not one of the above ships.

# 8739. Re: [HoustonScan] Cruise ship freq

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-06 00:11:16 UTC
From: Myles Barkman
Topic: 8734  Message: 8739

It was from a cruise ship. They were speaking English, not with accents,
and talking about tours.

457.5750 Mhz 114.8 Hz might be one of the following....

NCL Norwegian Sea or the Princess Lines Golden Princess

Not sure who is in Houston PORTS this weekend.

Not only Cruise Ships use those channels, might be a Cargo or LNG

check out
http://home.earthlink.net/~ecps92/cruise_ships.htm
for some great links and resources for Scannists
and Harbor Cams.

Let me know if it's not one of the above ships.

Hearing a helicopter talking on GPD channel 1 talkgroup 52208.
Does anyone know who's helicopter this is?
Didn't know Galveston PD had a helicopter.
Could be DPS, Coast Guard, private charter???

Sounds like a bad accident over in the Bolivar/Crystal Beach area.
Skymed helicopter en route.
Units on scene report one patient to be transported, one possible DOA, and one person in custody.
Ops on Galveston Co trunk 54352 for EMS, 50032 for SO.
There were two other helicopters that were cancelled.
Skymed 5 from La Porte just advised operations that they were standing down due to weather. Fog is getting bad out there.

Speaking of cruise ships, just heard EMS rolled out to the Grand Princess
cruise ship docked off Harborside for two patients, one with back pain and
another with abdominal pain.
Talkgroups heard are 51472 for EMS and 53072 for cruise ship docks.
Maybe they were partying too hard for Mardi Gras.

Sure seem to get a lot of injuries on these cruise ships.

Myles:
I did not have a radio on last night, I was not feeling well. But, the city often has a helicopter up for big events. In the past they have used it as a kind of aerial observation platform to look at and direct traffic flow.

Hope this helps.

Did anyone save the HFD district maps that were on the old website?
The city has changed up their webpages and I can't find them anymore.
They also don't have the HPD beat maps available and don't know if they will
when they get the statistics pages running this week.

Check out the HFD terms they have posted online now.
Didn't know about "smoke-eater and tush hog".

# 8758. Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-10 04:19:34 UTC
From: Frank
Topic: 8758  Message: 8758

I just watched the story on Channel 11 KHOU. They explained all the problems with the Houston radio comm... HPD and HFD.. here's the link..

http://www.khou.com/topstories/stories/khou050209_mh_defenders.90b50f76.html

Secret study: Houston's emergency radio system puts citizens, emergency crews at risk

10:00 PM CST on Wednesday, February 9, 2005

By Mark Greenblatt / 11 News Defenders

The 11 News Defenders are revealing why help from the police or fire departments could come too late when every second counts. Houston officials don't want you to know about the massive problem.

It's all about trouble with the city's radios -- radios that police and firefighters use to save your life.

The trouble was found in a study taxpayers paid for, but the city wouldn't give 11 News. So we dug up our own copy.

Tom Nixon remembers the day. "He ran right in front of my patrol car," he said.

"He" was Ronald Johnson -- 6 feet tall with a long criminal record who had just stolen a shot gun.

"So I jump out of my patrol car," said Nixon who pursued Johnson up a driveway.

"I chase the subject behind the house," Nixon said.

But then the suspect ran and jumped over the back fence leaving Nixon with a question of safety.

Reporter: "Big guy?"

Nixon: "Yes."

Reporter: "Probably pretty strong."

Patrolman: "Yes."

So Nixon decided to use his radio and get the help of other officers.

"I realized my radio was dead," said Nixon.

Because it's battery was old and worn out and hadn't been replaced by HPD.

"If they want me to come out here and risk my life I want equipment that works," said Nixon.

"They're worrried about dodging bullets, they don't need to worry about a dead battery," said Jim Davis, who ran the Houston Police Department's radio shop. "Almost everything is old."

And as result, what happened to patrolman Nixon happens to hundreds of other officers.

"I've had radios that I've personally dealt with that have been worked on as many as three times a month," said Davis. "We're heading for a critical meltdown if they don't address the problem."

And the problem? Not just the radios, but Houston's radio system often doesn't work, putting you, police, and firefighters in danger. The reason? It's outdated and aging. And it's something the city knows all about.

How do we know?

A secret study commissioned by the city in 2003 and obtained by the Defenders.

Known as the SWISS report or the Strategic Wireless Infrastructure Systems Study. It says: "All of Houston's radio systems are currently experiencing problems that must be resolved."

Problems like not enough room on the system for first responders to just talk.

Take the Houston Police, the report says, some police have to wait their turn just to get on the air which can be a real problem if immediate assistance is needed.

And that it "negatively impacts departmental response time and officer safety."

Or what about the Houston Fire Department? The report says they have the same problem resulting in garbled communications and increased response times to emergencies.

"As a citizen you're probably not going to get help as quickly as you need it," said John DiSalvo, an expert and pioneer in Public Safety radio systems.

And after reading the city's report, he says: "A very serious, bad situation for all the people involved."

That's because the study also says the city's system has dead spots where police or firemen can't receive or transmit a call for help which can put "personnel and the citzens of Houston at risk."

Places like shopping malls, parking garages, high-rises. And then there are the downtown tunnels, used by thousands, where Officer Nixon showed us the radio didn't work.

And even entire areas, like Kingwood, are riddled with dead spots.

"It's a serious situation," said Dennis Pruitt, an emergency medical technician for the Houston Fire Department. "Seconds matter, every second matters when it comes to an emergency."

But he says dead zones could be lethal for his patients.

"There are situations where you are going to need assistance," said Pruitt.

And sometimes his radio just wouldn't work -- like at Bush Intercontinental Airport.

"If you wanted to talk you couldn't get out. So you had to do footwork, run, to find a phone," said Pruitt.

"This is a very bad thing for a heart patient, as an example and the patient might die because of that," said DiSalvo.

But believe it or not some Houston radio towers also threaten public safety. Like the 500-foot one that towers over a residential area near Clodene.

In 2003, the city's secret report found rust and "significant damage" to the tower that "may present a threat to home owners" because it could eventually fall. And added it "must be addressed immediately."

Yet last week we found the same problems and showed them to our expert.

"I'd get that sucker fixed very quickly. And I mean tomorrow," said DiSalvo.

Reporter: "It's right up next to a neighborhood."

"Well, it's really not right up next to a neighborhood- the neighborhood is right up next to it," said Chief David Cutler who runs communications for the Houston Police Department.

So what about radio problems like overcrowding and dead zones?

Reporter: This negatively impacts officer safety and response time. Is that a good thing for citizens?

"It is not a good thing for anybody," said Chief Cutler.

So we asked the Mayor about everything we had seen.

"It's not a problem that's going to be solved in one day. It will be over a period of years," said Mayor Bill White.

And in the meantime? Police like Tom Nixon and firefighters like Dennis Pruitt will just have to make do.

"They put us on the backburner, until somebody gets killed, or somebody gets injured," said Pruitt.

Nearly a year and a half ago the SWISS report suggested a solution: That Houston fast track its move to a new digital radio system, like ones already online in Harris County and many other cities. But the city has failed to even seek bids on the design of that new system.

runs communications for the Houston Police Department. <<<

Oh yes, by all means, let's pick up and move the friggin neighborhood,
instead of fixing the much easier-to-deal-with tower.

# 8760. Re: [HoustonScan] Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-10 13:41:23 UTC
From: phulesau@aol.com
Topic: 8758  Message: 8760

Yeah, Let's move the neighborhood. I'm guessing it built up around the property where the tower was erected. but that's not an excuse for proper maintenance. I noticed that his radio didn't work underground, DUH. I didn't see them mention it wouldn't work there even if they went to a trunked system, and there would still be dead spots. Like some building and parking garages.

# 8761. Re: [HoustonScan] Houston Emergency Radio System on news

I guess now people that know absolutely nothing about the ins-and-outs of land-mobile radio (re: Mayor White and the City Council) are going to start screaming that Houston "upgrade" to "digital trunking".

"Nearly a year and a half ago the SWISS report suggested a solution: That Houston fast track its move to a new digital radio system, like ones already online in Harris County and many other cities."

Never mind...

-Josh

# 8768. Re: [HoustonScan] Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-10 23:16:48 UTC
From: David White
Topic: 8758  Message: 8768

If they would spend 10% of that money they could have one of the best radios systems in the world for HFD & HPD. It is just a fantasy that Motorola has convinced fire and police departments that they must change to 800 or they will not be able to use their existing radios soon. That is all BS.

Also, they seem to think that if they are on 800 they will be able to talk to everyone. Where I live, College Station has had a 800 system for at least 6-8 years. Now Bryan is going on a new one. The Bryan system is digital and the CS systems analog. Guess what, they can't talk with each other without Bryan going back to analog.

If they let the new radios get old batteries, then they also will not work.

Also they have many of the same dead spots as when they had the old VHF radios.

Just guess what they could do with a billion dollars if they did not buy these new radios. They might be able to reduce taxes. What a novel idea.

From: Thomas
Topic: 8758  Message: 8769

I am not convinced that it would even be a start. I fail to see the superiority of trunked systems. Higher frequencies require more power, do not travel as far, and are more susceptable to catastrophic failure.

Harris County doesn't seem to have much trouble with their system. For the most part HFD seems to handle the inherent problems with radio just fine. So you have to repeat yourself every now and then, big deal.

As for RF dead spots, there is no feasable way to eliminate them, regardless of the band of frequencies you use. The best solution is to have a cross-band repeater installed on each mobile vehicle so the portable units have an extra boost.

# 8770. Re: Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-10 23:27:44 UTC
From: elentz1
Topic: 8758  Message: 8770

That very same officer was interviewed about a month or so ago in some other local media and I have forgotten which one now. It's not new news nor is the report new. It's a very common situation when one news media borrows a story lead from another media outlet and broadcast or prints it as a new report.

The radio situation will be resolved in the very near future when Houston has to switch to the newer APCO 25 narrow band frequencies. DPS has made the switch in parts of Texas and moving toward the Houston area. DPS went digital and unknow if Houston will be digital or conventional. Will they get on the STARNET trunk system?, who knows. The city of Houston didn't join the year's old very successful MAP van program and I doubt they would utilize the successful STARNET radio system. Houston can always do something better than anyone else, just ask them.

I think it funny that the City Comtroller will do a audit of the new Houston Dispatch Center. Have an idea that we will never see that report. Most of the system was purchased when she was on the City Council. Yes, some of that equipment is as much as five years old.

The Fire Department is using new radios that were purchased in the last few years and the old radios are being purchased by individuals and are very usable.

Many times a radio failure is nothing more than someone trying to transmit on a busy frequency. This doesn't happen on a trunked system because the radio will tell you that the talkgroup is busy and you know your transmission did not go thru. On a conventional radio system this is not always the case. Most likely if the officer had waited 5 or 10 seconds to retransmit then the conversation would have been completed. It is impossible to have enough frequencies available to avoid this type of situation. .

They don't need a trunking system. The system can be fixed with out spending millions of dollars installing a trunking system. They need competent people to work there, most of the ones i know have retired. So that does not leave any one left that is qualified, there are no FCC trained radio tech's left that i know of with a class 1 or 2 license.

# 8773. RE: [HoustonScan] Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-11 00:28:04 UTC
From: Scott Royall
Topic: 8758  Message: 8773

Oh boy. I guess you don't have a cell phone? I do, and it actually works in the Houston tunnels. Why? It's a little concept called "signal density." A single site can throw out gigawatts of power and still not beat a web of little sites interconnected. The latter is the idea behind trunking and cellular. That's right, cell phones are basically a form of trunking. They all share a very limited number of frequencies compared to the number of users. I never have trouble getting through, and that's because the frequencies are time-shared. That's exactly what HPD and HFD need urgently. You can't keep tying up more and more frequencies for a single use.

Notice that I haven't said diddly about the analog vs. digital argument. Digital gives you a lot more options if you can afford to provide the much higher signal density it requires. However, my power was that trunking is the only viable way to give HFD and HPD the many more virtual channels they need.

Subject: Re: [HoustonScan] Houston Emergency Radio System on news

If they would spend 10% of that money they could have one of the best radios systems in the world for HFD & HPD. It is just a fantasy that Motorola has convinced fire and police departments that they must change to 800 or they will not be able to use their existing radios soon. That is all BS.

Also, they seem to think that if they are on 800 they will be able to talk to everyone. Where I live, College Station has had a 800 system for at least 6-8 years. Now Bryan is going on a new one. The Bryan system is digital and the CS systems analog. Guess what, they can't talk with each other without Bryan going back to analog.

If they let the new radios get old batteries, then they also will not work.

Also they have many of the same dead spots as when they had the old VHF radios.

Just guess what they could do with a billion dollars if they did not buy these new radios. They might be able to reduce taxes. What a novel idea.

Ahemm. Harris County is trunked. HFD will eventually get someone killed because of all that need to repeat.

---

From: Thomas [mailto:bayoubuzzard2000@...]
Sent: Thursday, February 10, 2005 5:24 PM
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: Houston Emergency Radio System on news

I am not convinced that it would even be a start. I fail to see the superiority of trunked systems. Higher frequencies require more power, do not travel as far, and are more susceptable to catastrophic failure.

Harris County doesn't seem to have much trouble with their system. For the most part HFD seems to handle the inherent problems with radio just fine. So you have to repeat yourself every now and then, big deal.

As for RF dead spots, there is no feasable way to eliminate them, regardless of the band of frequencies you use. The best solution is to have a cross-band repeater installed on each mobile vehicle so the portable units have an extra boost.

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Houston Emergency Radio System on news

They don't need a trunking system. The system can be fixed with out spending
millions of dollars installing a trunking system. They need competent people
to work there, most of the ones i know have retired. So that does not leave
any one left that is qualified, there are no FCC trained radio tech's left
that i know of with a class 1 or 2 license.

# 8776. RE: [HoustonScan] Re: Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-11 03:55:53 UTC
From: Bad Pig
Topic: 8758  Message: 8776

It is not very often that I get up on my soap-box on this forum, but
this is a situation that has several parts that need to be addressed.

>
> Because it's battery was old and worn out and hadn't been replaced by
> HPD.
>
>
> "They're worried about dodging bullets, they don't need to worry about
> a dead battery," said Jim Davis, who ran the Houston Police
> Department's radio shop. "Almost everything is old."

Yes, some of HPD's radio equipment is old. This does not mean they need
to upgrade to the starnet system. Batteries can be replaced and the
city can purchase new radios for the current system and not replace a
entire fleet of radios. The current radios in use by HPD are actually
better than most of the newer radios on the market as far as durability
is concerned. HPD has just not budgeted to replace equipment on a
regular basis as it should be done.

> And the problem? Not just the radios, but Houston's radio system often
> doesn't work, putting you, police, and firefighters in danger.
> The reason? It's outdated and aging. And it's something the city
> knows all about.

Yes, the system is aging, but for the most part works extremely well. If
one repeater goes down there are numerous other channels an officer
could switch over to. Yes, the same could be said for starnet, but if
the main controller downtown goes out it could cause major problems with
the system.

> Problems like not enough room on the system for first responders to
> just talk.
>
>
> Take the Houston Police, the report says, some police have to wait
> their turn just to get on the air which can be a real problem if
> immediate assistance is needed.

This is no different than any other agency. Gotta wait your turn. Yes,
the individual channels may be used at their capacity, but you would
have to change to a system where you had more than one mic for each
geographical area. (ex. Split Southeast mic into two different radio
channels)

> Or what about the Houston Fire Department? The report says they have
> the same problem resulting in garbled communications and increased

> response times to emergencies.

Get rid of the automated dispatch voice. It is difficult to understand at best. Start dispatching Fire and EMS on separate channels, this could clear up some of the traffic.

> And after reading the city's report, he says: "A very serious, bad
> situation for all the people involved."
>
>
> That's because the study also says the city's system has dead spots
> where police or firemen can't receive or transmit a call for help
> which can put "personnel and the citizens of Houston at risk."

I challenge them to show me a system where a radio will work 100% of the time. It could be done in theory, but it is extremely cost prohibitive. HPD officers have far fever problems getting out on the radio than most county officers I know. Take a county radio to the same locations and they most likely would not work either.

>

> immediately."

Repair or replace the tower. This is a maintenance issue.

>> Nearly a year and a half ago the SWISS report suggested a
> solution:
> That Houston fast track its move to a new digital radio system,
> like
> ones already online in Harris County and many other cities. But
> the
> city has failed to even seek bids on the design of that new
> system.
>

Digital is not necessarily the answer for public safety. Digital is great when it works right, but does not always. The news report make reference to the digital system already online in Harris County. The system is digital capable, but not actually being used as such. Transmission are still analog.

The answer to the City of Houstons problems can not be answered by Starnet.

Well enough said I'll hop back down off of my soapbox and go back into lurking mode.

# 8777. RE: [HoustonScan] Houston Emergency Radio System on news

Date: 2005-02-11 04:54:35 UTC
From: Bad Pig
Topic: 8758  Message: 8777

There is open spectrum in the UHF public safety band. They could also
increase usable spectrum by going narrowband. Many of the current
radios in use will support this change. Overall this would still be
less expensive for the city than switching to starnet and would allow
the city to be in control of its own radio system and not turning
control over to the county.

To facilitate interagency communication there are several ways this can
be done without the city switching to 800mhz. Namely patching two
radios together. This is a very effective tool.

Subject: RE: [HoustonScan] Houston Emergency Radio System on news

How do you propose they add channels? That's the only way to ease
overcrowding

Subject: Re: [HoustonScan] Houston Emergency Radio System on news

They don't need a trunking system. The system can be fixed with out
spending
millions of dollars installing a trunking system. They need competent
people
to work there, most of the ones i know have retired. So that does not
leave
any one left that is qualified, there are no FCC trained radio tech's
left
that i know of with a class 1 or 2 license.

You raise several valid points, Bad Pig. I just have one thing to bring up. Are you familiar with the new districts HCSO has and is creating? I cannot speak to the official reason, but I can tell you it has drastically lowered radio congestion for districts 1 and 4. I'll also point out that HCSO is creating real districts rather than just adding channels to existing districts as you mentioned in your Southwest. Perhaps HPD should finally match the number of channels to their 20 real districts.

Yeah, I know, it will never happen. I can't see HPD coughing up enough green to get that done. But, you must admit that would make getting Dispatch's attention much easier.

And, by the way, it's much harder to get "walked on" on a trunked system.

Cell phones can be made to work inside tunnels, elevator shafts and basements by placing a passive repeater to carry signal to/from the outside down into these hard-to-reach areas. The same trick works for two-way radio.

Trunking and conventional two-way radio systems have a kind of spectrum efficiency that cellular networks can't touch: delivering a single message to many recipients (like dispatch).

On the other hand, fire ground communications (and some SWAT-like situations) problably should NOT be trunked. Even better, make it simplex - no repeater to fail.

I would personally have no problem with a redistricting of HPD, but I do not ever see that happening due to internal politics and changes in command staff that would have to take place. From a management standpoint it would be better to redistrict, but really all HCSO has done is add 3 talk groups. One for a dispatch, and two tac channels.

Yes, you can still get walked on using a 800mhz system. Even worse is the horrible tone that you can receive no allowing you access to the channel due to system overcrowding.

From: Steve Nelson
Topic: 8758  Message: 8783

> Take the Houston Police, the report says, some
> police have to wait
> their turn just to get on the air which can be a
> real problem if
> immediate assistance is needed.

If an officer needed immediate assistance the air
would be closed...everything is done by priority for
instance, Code 1 calls(lights/siren) which the
dispatcher closes the air until the situation is under
control. Very rarely two code 1 calls happen, but if
it should there wouldn't be a problem...units switch
over to citywide or Channel 10 where all Code 1 calls
are dispatched from all HPD channels.
When a suspect is in an area usually all units on
scene go over to channel 8 freeing up the airwaves.
If 2 units are trying to talk, the dispatcher can
overide them both & tell which one to give their
message or just send it over the MDT which frees up
more airwaves.
So I see nothing changing in the near future with the
current system.
What needs to be done is the hiring of more officers
when 2,500 will be retiring in the next couple years.

Ahemm. While Harris County has a trunked system, much of the fire
agencies within HCEC is NOT trunked.

Cypress/Cy-Fair/Ponderosa/Champions/Klein/Adline/Westfield/Northwest/Little
York/Spring

Check the frequency list.

Also, they do AS MUCH repeating on the trunked systems as the
non-trunked. To think that going to a higher frequency will improve
communication clarity is a myth. Folks, radio is not a perfect
science. There will always be dead spots and there will always be the
need to repeat transmitions. To assert that "HFD [or HPD] will
eventually get someone killed" over repeating information is absurd.
They are not exempt from the laws of physics. BTW - their department
has received WORLD WIDE recognition for their procedures and response
times.

Even NASA, with their technology, has to repeat stuff over the air.

Lower frequencies travel farther, with less power. They are not as
susceptable to atmospheric changes. Furthermore, in a trunked system,
if the controller fails the whole system is down and the agencies have
to pull out their low-band stuff to communicate.

"There will always be dead spots and there will always be the
need to repeat transmitions".

This couldn't be more true with the EDACS system that montgomery co
uses, on a daily basis on about every other broadcast they have to
repeat sometimes 3 or 4 times.

# 8787. RE: [HoustonScan] Re: Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-11 17:58:54 UTC
From: Scott Royall
Topic: 8758  Message: 8787

You are sure right about HPD politics. My perception is that blocks a number of needed improvements. I disagree that adding talkgroups is "really all" HCSO did, because the new groups correspond to a geographic area. That's a significant distinction because it moves all the radio traffic generated in or for that area.

Your second paragraph doesn't quite make sense. I think you were talking about what happens when a given site maxes out. Yes, that is certainly a problem, but the solution doesn't involve touching all the field radios. Instead, it can be implemented at the site or central controller.

Subject: RE: [HoustonScan] Re: Houston Emergency Radio System on news

You raise several valid points, Bad Pig. I just have one thing to bring up. Are you familiar with the new districts HCSO has and is creating? I cannot speak to the official reason, but I can tell you it has drastically lowered radio congestion for districts 1 and 4. I'll also point out that HCSO is creating real districts rather than just adding channels to existing districts as you mentioned in your Southwest. Perhaps HPD should finally match the number of channels to their 20 real districts.

Yeah, I know, it will never happen. I can't see HPD coughing up enough green to get that done. But, you must admit that would make getting Dispatch's attention much easier.

And, by the way, it's much harder to get "walked on" on a trunked system.

# 8788. RE: [HoustonScan] Re: Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-11 18:15:53 UTC
From: Scott Royall
Topic: 8758  Message: 8788

Yes, he paraphrased what I said, and then added that frequency utilization for cell phones is even worse. That was my point. If trunking can tolerate cell phones, public service applications are a natural for it. No one said anything about all comms being trunked. To the contrary, I know HCSO doesn't trunk the more sensitive stuff.

# 8789. Washburn Tunnel

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-11 18:53:24 UTC
From: Myles Barkman
Topic: 8789  Message: 8789

Think I just confirmed the tunnel folks using STAR-Net on talkgroup 8752.
This is Harris County Commissioners Precinct 2.
I had an idea that they might use this so I programmed it in.
Also wondering if the Lynchburg Ferry folks use it.
What sort of special use has anyone heard on any of the other commissioners talkgroups?
Talkgroups are:
8400 Pct 1 Special Olympics
8720 Pct 1 Dispatch Central/South
8752 Pct 2 Dispatch Central/East/Washburn Tunnel/Lynchburg Ferry?
8784 Pct 3 Dispatch West
8816 Pct 4 Dispatch North
12112 Pct 1 Parks
13136 Pct 3 Road Crews
13200 Pct 1 Supervisors
13328 Pct 2 Supervisors
13360 Pct 3 Supervisors
13392 Pct 4 Supervisors

world wide recognition? so hour or more response times are normal the world over? 2 case in points both of which i observed, post 9/11 even.... at the chem facility i work at in the ship channel area of houston, we had a disturbance involving a highly intoxicated and combative person trying to gain entry into the plant, on calling hpd, they arrived a hour and 5 min AFTER we had convinced the person to leave.

second case, HFD was called for an ambulance for a person who had inhaled some chemical vapors, even though our site is on the ship channel, very close to 3 different stations, the ambulance that HFD decides to send us comes from IAH? yep both of those are good dispatchin and responses.....

# 8792. Re: For Scott - Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 00:01:40 UTC
From: Thomas
Topic: 8758  Message: 8792

I cannot speak for HPD, since I do not monitor their activities. As for the world-wide recognition - that was for HFD, not HPD. You can find the information yourself on the net.

Of course, there's problems with every department, including Houston. I will bet 100 to 1 that the reason why the EMS unit had to come from the IAH area is because the other units closer to your location were busy responding to someone with a tummy ache or something idiotic that doesn't call for an actual emergency. There's a report that Peter Jennings is going to do on this very problem (oh, and he is using Houston as the example).

You should not be critical of a system that you obviously know little about. Trust me, for all it's flaws, Houston has a darn fine group of people putting it on the line for us every day. No system is perfect, but Houston FD/EMS does a great job despite all their radio and computer troubles.

# 8795. Re: For Scott - Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 00:49:10 UTC
From: Thomas
Topic: 8758  Message: 8795

You said "Ahem. Harris County IS trunked." I responded back. This
other gentleman was responding to my response..... oh well - forget it.

I was referring to this message that follows:

While Harris County has a trunked system, much of the fire
agencies within HCEC is NOT trunked.

Cypress/Cy-Fair/Ponderosa/Champions/Klein/Adline/Westfield/Northwest/Little
York/Spring

Check the frequency list.

Also, they do AS MUCH repeating on the trunked systems as the
non-trunked. To think that going to a higher frequency will improve
communication clarity is a myth. Folks, radio is not a perfect
science. There will always be dead spots and there will always be the
need to repeat transmitions. To assert that "HFD [or HPD] will
eventually get someone killed" over repeating information is absurd.
They are not exempt from the laws of physics. BTW - their department
has received WORLD WIDE recognition for their procedures and response
times.

Even NASA, with their technology, has to repeat stuff over the air.

Lower frequencies travel farther, with less power. They are not as
susceptable to atmospheric changes. Furthermore, in a trunked system,
if the controller fails the whole system is down and the agencies have
to pull out their low-band stuff to communicate.

# 8797. RE: [HoustonScan] Re: For Scott - Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 03:22:24 UTC
From: Scott Royall
Topic: 8758  Message: 8797

Ah. Yes.

Well, it is a long proven fact that higher frequencies do propagate better in urban environments. If that was not the case, we would still be using 1.6 MHz. The explanation is that, as you go up the RF spectrum, the properties become less like sound and more like light. I refer mainly to the properties of reflection and diffusion, they make light much harder to stop than sound. As I say, Tom, this is all proven by testing.

No, radio is never perfect, nothing done by humans ever is. We are really talking about bettering the odds. Of course environmental factors must be included, but we are talking about a very urban area. That's why cell phone RF allocations are where they are. That's not just because that spot of spectrum was open-although I'm sure that was considered. :-) If I have to depend on a radio, I want the best chance of being heard. Wouldn't anyone?

Subject: [HoustonScan] Re: For Scott - Houston Emergency Radio System on news

You said "Ahem. Harris County IS trunked." I responded back. This other gentleman was responding to my response..... oh well - forget it.

I was referring to this message that follows:

While Harris County has a trunked system, much of the fire agencies within HCEC is NOT trunked.

Cypress/Cy-Fair/Ponderosa/Champions/Klein/Adline/Westfield/Northwest/Little York/Spring

Check the frequency list.

Also, they do AS MUCH repeating on the trunked systems as the non-trunked. To think that going to a higher frequency will improve communication clarity is a myth. Folks, radio is not a perfect science. There will always be dead spots and there will always be the need to repeat transmitions. To assert that "HFD [or HPD] will eventually get someone killed" over repeating information is absurd. They are not exempt from the laws of physics. BTW - their department has received WORLD WIDE recognition for their procedures and response times.

Even NASA, with their technology, has to repeat stuff over the air.

Lower frequencies travel farther, with less power. They are not as
susceptable to atmospheric changes. Furthermore, in a trunked system,
if the controller fails the whole system is down and the agencies have
to pull out their low-band stuff to communicate.

# 8798. Re: Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 03:58:58 UTC
From: scanfan02
Topic: 8758  Message: 8798

I've never heard of a time when HCSO doesn't trunk! When did you hear them non trunked? Maybe they were on the ITAC (PAC) channels, but I've never heard them using the channels either. I only hear DPS on the ITAC channels.

# 8799. Re: For Scott - Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 04:11:17 UTC
From: Thomas
Topic: 8758  Message: 8799

The two primary reasons for going up the radio spectum are 1)the
physical size of the equipment and 2) the lower bands were getting
more crowded. Firefighters and EMS folks prefer smaller equipment on
their belts. Trunking was created as a practical measure for allowing
more agencies to utilize less frequencies.

I don't give a hoot about propagation 'tests.' I pay attention to what
I hear in the real world. Agencies who are in the trunk systems are
have the same troubles as anyone else operating in the other bands.

# 8800. RE: [HoustonScan] Re: Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 04:22:41 UTC
From: Scott Royall
Topic: 8758  Message: 8800

Heh! That's exactly why they do it, so people won't hear! Yes, I occasionally hear them going to the ITAC direct channels.

---

Subject: [HoustonScan] Re: Houston Emergency Radio System on news

I've never heard of a time when HCSO doesn't trunk! When did you hear them non trunked? Maybe they were on the ITAC (PAC) channels, but I've never heard them using the channels either. I only hear DPS on the ITAC channels.

# 8801. RE: [HoustonScan] Re: For Scott - Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 04:36:27 UTC
From: Scott Royall
Topic: 8758  Message: 8801

Are you "in the business" (public safety)?

Yes, each agency wants beau coup frequencies, and the FCC finally got fed up. Bear in mind I go back 30-some years to when the FCC first started looking at trunking.

_____

From: Thomas [mailto:bayoubuzzard2000@...]
Sent: Friday, February 11, 2005 10:11 PM
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: For Scott - Houston Emergency Radio System on news

The two primary reasons for going up the radio spectum are 1)the physical size of the equipment and 2) the lower bands were getting more crowded. Firefighters and EMS folks prefer smaller equipment on their belts. Trunking was created as a practical measure for allowing more agencies to utilize less frequencies.

I don't give a hoot about propagation 'tests.' I pay attention to what I hear in the real world. Agencies who are in the trunk systems are have the same troubles as anyone else operating in the other bands.

# 8802. re: Houston Emergency Radio system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 12:28:01 UTC
From: Myles Barkman
Topic: 8802  Message: 8802

Another aspect of Houston and other agency's communications problems is training. I think a great number of repeats are due to people having their radios on scan, priority, on wrong channel, volume too low, or radio just off.
How many times a day do you hear HFD not being able to contact an EMS or FD unit for several minutes, and having to mass broadcast on all channels to find them and get them on the right channel?
Lots of folks don't know how to properly use their radios.
Even the dispatchers are to blame sometimes for not hearing the field units. How many times have you heard perfectly what someone said but the dispatcher said they were "covered" or didn't come through. The dispatchers are tied into the repeater through wire line. They hear what you hear over the repeater, nothing more, nothing less. If the field unit got covered, you could hear it on your scanner too.
The opposite cannot be said though. There could be many times a field unit can receive some interference and not hear the dispatcher or other field units even though you could hear it fine on the scanner.
And then there is the problem with people "doubling" or keying up on top of each other.
I understand it is hard sometimes to know when someone has ended their transmissions. There is no static burst, no roger beep but sometimes, you have to watch that busy light on the radio or just wait a couple of seconds after you "think" they are done talking and not just taking a long pause or their radio dropped out for a second.

And then there are the times people just aren't paying attention or get distracted during a radio transmission. Or perhaps that crazy, kicking screaming prisoner in the back seat makes it rather difficult to hear.
Don't forget that 100W siren. That's many times louder that the speaker in the cab.

With the battery issue, true that many probably need to be replaced. They get cycled so many times and abused that their life is rather short.
Normally, one of those HT batteries might last a few years but in public safety use in Houston, they probably only last a year.
Do the field units have the capability of charging their radios in the vehicles?
Could it be possible that they guy whose battery failed him forgot to charge it or didn't charge it completely.

Not all radio problems around here are technical. People use the radios and people make mistakes.

# 8803. RE: [HoustonScan] re: Houston Emergency Radio system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 18:41:36 UTC
From: Scott Royall
Topic: 8802  Message: 8803

My compliments on a fine post about the human factors involved in two-radio. Everything you said is true, and then some. The dispatch center for HPD is rather noisy at times. You can tell that from the occasional background noise you hear. Dispatchers are supposed to wear headsets, but who can wear "the cans" for a whole shift? I haven't worn mine in years.

Ni-cad packs are rated at about 350 cycles under good conditions so it's no surprise HPD has problems. They should be replacing them every six months or so. Lithium-ion does better, but I don't know if anyone makes that in a radio pack.

"Doubling" is pretty common on HPD channels. Yes, it is a matter of radio discipline, but it's understandable. A cop running after a suspect isn't likely to notice if his calls for help are being covered. I used to be very opposed to trunking, because it was harder to monitor. But, after listening to a Type II system for a decade, I must admit that it has advantages for the actual users. It's harder to get covered when the controller must grant other radios permission to transmit. Of course that system has its weaknesses, every system does. Yet, it does automate a part of what currently has to be radio discipline. Again, I've been listening for 30 years, and I know what I hear.

One other thing to point out here is that the radios can be programmed not to key up if the channel is busy but in a public safety setting, that could be deadly if some dumb@ss was sitting on their mic. It would shut everyone down. That's why it's not implemented.
You could also program the radio to override this by quick-keying, or double keying the microphone but that would be another training issue and when things are hitting the fan, who want to worry about if you need to double key?

I think the radios need to have time-out timers set at about 30 seconds. That way you aren't tying up the repeater while you have your head up in a dark place.
Who needs to be able to transmit a message more than 30 seconds? That's part of training too. Short, to-the-point transmissions. If you have to pause to go "uhhh" or "ummm" thinking of what to say next, you don't need to be transmitting.

Topic: 8758  Message: 8806

I thought the way HFD had the radio system prior to the switching over
to the computer voice worked just fine I just don't see why they didn't
keep it in place it seemed to work great

Subject: Re: [HoustonScan] Houston Emergency Radio System on news

They don't need a trunking system. The system can be fixed with out
spending
millions of dollars installing a trunking system. They need competent
people
to work there, most of the ones i know have retired. So that does not
leave
any one left that is qualified, there are no FCC trained radio tech's
left
that i know of with a class 1 or 2 license.

# 8807. RE: [HoustonScan] Houston Emergency Radio System on news

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-12 22:26:14 UTC
From: Scott Royall
Topic: 8758  Message: 8807

Spoken like a genuine scanner nut. :-)

Here's a little hint: If a given channel is so active that the repeater can stay keyed for minutes at a stretch, that channel is probably critically overloaded.

Subject: RE: [HoustonScan] Houston Emergency Radio System on news

I thought the way HFD had the radio system prior to the switching over to the computer voice worked just fine I just don't see why they didn't keep it in place it seemed to work great

How do you propose they add channels? That's the only way to ease overcrowding

They don't need a trunking system. The system can be fixed with out spending millions of dollars installing a trunking system. They need competent people to work there, most of the ones i know have retired. So that does not leave any one left that is qualified, there are no FCC trained radio tech's left that i know of with a class 1 or 2 license.

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-13 00:45:47 UTC
From: r e goldy
Topic: 8808  Message: 8808

Please understand that this is not aimed at anyone in particular, but it is a gripe of a sort.
There are some days when I do not have the time to check the actual site. In case that occurs I also subscribe to email delivery of the digest version.
I have noticed that in many cases when a person is replying to a previous message, which is itself a reply to something, a great deal of space and reading/scrolling time could be saved by truncating at least some of the previous messages.
I do not notice that this is an artifact of the digest edition alone, it seems also to be present in the full group.
Just an observation, from one who reads a lot of the content but seldom has any thing to add to the discussion.

Okay folks, need to know exactly WHERE/WHAT TIME at Memorial Park we're meeting for this month, so's I can change the meetup site to reflect it.

Anyone?

# 8810. Re: [HoustonScan] Messages

People have been griping about this for YEARS, since before yahoo even existed... since a graphical web was merely a pipe dream in someone's mind. Trust me, it may get better for a few days, but in the long run, you're wasting your breath.

From: Thomas
Topic: 8758  Message: 8811

Hi Aaron,

Just to help your understanding, the radio system and computer aided dispatch (CAD) are two different systems. The problems OEC has complained of mostly pertains to the CAD system. When they switched from human dispatching to CAD, they didn't change their radio system; that stayed the same.

# 8812. Re: Messages

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-13 02:04:36 UTC
From: Thomas
Topic: 8808  Message: 8812

Keep scrolling, brother....

LOL - I know the feeling all too well. That's why I've stopped getting emails all together. I just read from the Yahoo site.

I do, however, find the reply-thread useful at times.

# 8813. Re: [HoustonScan] Messages

Yahoo group: HoustonScan (2005 — 2006)

From: Ben Worrell -ne5B
Topic: 8808  Message: 8813

[soapbox]
Replies sent Same day, sure - truncate em.
Replies sent more than a day or 2 after the message to which the reply is intended, keep at least the meat of the content.

It's a pain getting a reply that's several days old, with only the subject line to refer too.

Also when you are replying to a reply which was a reply to the original, it helps to leave the message intact, otherwise you can't tell if the reply was to the original message or the latest posting.....

My main complaint is those who reply to the digest version and leave either the subject line
as RE: Digest or when they leave the entire content of the digest in the reply..
So with that I would add: when replying to a Digest version, please please please only leave text to the message to which you are replying and please take the time to edit the subject so that it reflects the original subject line prefixed with RE:
[/soapbox]

They changed because they wanted all Dispatch consoles to be in the same building (HPD and HFD), which they have accomplished, but now they need to fix HFD's way of dispatching.

I think he meant combining fire and EMS on the same channels. AFAIK, none of the other major cities in Texas do this. Dallas, Ft. Worth, and San Antonio all dispatch their fire and EMS on the same channel, but they have dedicated fire and EMS response channels. Why HFD opted not to do this is anyone's guess. It doesn't make for easy or enjoyable listening, that's for sure.

No indoor area that I'm aware of.
I'm voting for around the picnic tables.. I'll whip out the keymap when I'm out at the truck for a smoke, later and see what I can figure out.

...I think that if there's a rain issue, we can adjourn to another venue, or something? *shrug* Don't know why outdoors is so popular, to be honest.. I've never been a fan of anywhere outdoors in Houston. (yes, yes, I know it's volume level and seating primarily).

From: lawman7449
Topic: 8758  Message: 8823

I am replying a little late on this topic, but thought I should add a few comments on the issue since I use these radios daily.

First to answer a question about the batteries. No, we do not have a way of charging the batteries in the shops. Unless a HPD officer buys his own charger(like thats going to happen). If the batteries would be replaced regulary it wouldn't be a issue. When in good condition the batteries will easly last us several shifts on one charge.

The problem is that the hand held batteries are hardy drained during a 8 hour shift and go into the charger at the station. This is repeated many times and the battery develops a short charge "memory". Some stations replace their batteries on a schedule, most do not. I cannot count the number of times I went to key up my handheld only to discover that the radio has the power to receive but not transmit. As you can imagine this is a serious officer safety issue. I S.O. over my handheld to test it out, but by mid shift the short cycle battery may be dead.

The overall quality of the handhelds has gotten quite poor. We send them out for repair and they come back still broken. Don't know what to say about the City radio shop other than it sucks. They also do poor quality installs on the MDT's and radios in the new shops.

As for the city wide radio system. Well, if the city were to split up west side, south west, and south east onto more radio "mics" the channel over crowding would be solved.

The county has tried to get the city onto STARNET sever times. Will not happen due to politics. I question if STARNET could handle the HUGE load of radio traffic HPD would add on weekend evenings and nights.

As far as signal strength and dead spots. That will happen with any radio system. County deputys have told me they have many dead spots in their areas, mainly with their handhelds. I was on one persuit scene that wound up way out in HCSO district 4 after the suspect wrecked. The county officer could not reach his dispacther on his radio but we could on ours; just had ours relay the info to the county.

At my house in Katy, I also have way stronger signal strength with the city radios verses STARNET; either the downtown site or Clodine.

The city can't seem to decide on what to do about a new jail that has a 2005 deadline, so I do not imagine them overhauling the radio

system any time soon. All that needs to be done is add a few new mic posistions and fix the handheld radios.

Thanks David, for the interesting glimpse inside HPD Patrol Division's (lack of) radio management practices. You pretty much confirm my opinion that HPD is managed by the Keystone Kops! It's criminal that the 5th largest US city is so poorly run. Remind me to tell you sometime about the tale of my van. Yes, it was finally recovered, after spending several weeks sitting in plain sight just off Montrose being used as a brothel. The county and I both knew the approximate location, but we couldn't convince HPD management to send a few units to look. A patrolwoman finally tripped over it on her own, and kudos should go to her. I'm very fed up with HPD's internal turf wars.

Subject: [HoustonScan] Re: Houston Emergency Radio System on news

I am replying a little late on this topic, but thought I should add a few comments on the issue since I use these radios daily.

First to answer a question about the batteries. No, we do not have a way of charging the batteries in the shops. Unless a HPD officer buys his own charger(like thats going to happen). If the batteries would be replaced regulary it wouldn't be a issue. When in good condition the batteries will easly last us several shifts on one charge.

The problem is that the hand held batteries are hardy drained during a 8 hour shift and go into the charger at the station. This is repeated many times and the battery develops a short charge "memory". Some stations replace their batteries on a schedule, most do not. I cannot count the number of times I went to key up my handheld only to discover that the radio has the power to receive but not transmit. As you can imagine this is a serious officer safety issue. I S.O. over my handheld to test it out, but by mid shift the short cycle battery may be dead.

The overall quality of the handhelds has gotten quite poor. We send them out for repair and they come back still broken. Don't know what to say about the City radio shop other than it sucks. They also do poor quality installs on the MDT's and radios in the new shops.

As for the city wide radio system. Well, if the city were to split up west side, south west, and south east onto more radio "mics" the channel over crowding would be solved.

The county has tried to get the city onto STARNET sever times. Will not happen due to politics. I question if STARNET could handle the HUGE load of radio traffic HPD would add on weekend evenings and nights.

As far as signal strength and dead spots. That will happen with any radio system. County deputys have told me they have many dead spots in their areas, mainly with their handhelds. I was on one persuit scene that wound up way out in HCSO district 4 after the suspect wrecked. The county officer could not reach his dispacther on his radio but we could on ours; just had ours relay the info to the county.

At my house in Katy, I also have way stronger signal strength with the city radios verses STARNET; either the downtown site or Clodine.

The city can't seem to decide on what to do about a new jail that has a 2005 deadline, so I do not imagine them overhauling the radio system any time soon. All that needs to be done is add a few new mic posistions and fix the handheld radios.

The radio shop is responsible for rotating out the batteries. I've seen them come do it a few times (they show up with milk crates full of batteries and take the old ones). The problem is, they don't wait around and get the ones that are out in the field. So, if you happen to get a battery that missed a couple of rotations, it could be on it's last legs.

Look for the little colored sticker on the bottom of the battery. I don't know what color they're up to, but I just look for one that still has the sticker on it and figure that's pretty good. Also I, and plenty of other officers, have bought our own radios (and chargers). A Saber is going for $140 these days...

On the Sabers with the orange buttons the little itty bitty battery icon will start to flash when it's getting low. Not that I have ever thought to check mine until it was already too late. On the Astros with the green buttons it will beep occasionally.

The Sabers most of us use have been out of production for 10 years
according to Moto's website, and I think the Astros have been done for a couple years
too. When I was in Narcotics I had a leased radio because the city didn't
have any. I was furious when I saw a couple hundred HFD Sabers being auctioned
off on ebay.

They are in negotiations for that right now. Retired Chief Storemski, who
took John Bales' spot as Director of Public Safety, is actually for it. His
concern is not only being able to handle the load but also the in-building
coverage. What they are leaning towards right now is the city building up it's
own 700 trunked system and mating it with county system. We would get the
in-building coverage we need on our own system, but also the ability to "roam" on
to the county system when we get outside our home turf.

If we were to go completely over to the county system to handle the load
the county might have to take over the city's public works system and it's 20
(?) frequency pairs. This is also being considered. Also, HPD is in the
process of purchasing some county radios. We've got 5 (wahoo!!!) already, but I
am still trying to get about 80 more hurried through the grant process. They
have 80 Police Depts on them. So far I have used one of them to help the county
and Webster on an assist, to coordinate looking for a carjacking suspect with
U of H PD, and to get Pearland to stop a chase for us the other night. If I
can get enough out in the field this will be a daily occurrence I believe.

The FCC gave us a HUGE Christmas present when they extended the deadline
for the wideband FM equipment. Until then, equipment compatible with both the
PD and Fire systems would not have been able to be manufactured or imported
past the end of this year. That had the city sweating. The deadline got
extended so now I feel they may rest on their laurels again and go back to the
standard operational mode of "crisis management" where we simply handle whatever is
the worst crisis at the time and ignore everything else.

Has Houston considered 460 UHF Motorola Trunking? It seems they could use their currently assigned frequencies and upgrade the system to a TRS. Shouldn't it be compatable for patches to Starnet?

Yes, they could do that. It has already been done in Washington DC:
http://www.radioreference.com/modules.php?name=TRSDB&sid=234

If you also consider narrowbanding and convincing other agencies with
450/460 MHz channels to get on board, then there could be a lot of
channel pairs available for such a system.

I have a question that I can seem to locate on the
internet. I was wanting to know if anyone had information about plans
to convert STARNET (SoutheastTexas Area Radio Network)to digital?
Weeks, months years, never??? I think eventually they will convert,
but can't seem to find any information on the subject.

Thanks,
Bob

I am also sure that at some point and time they will convert to digital. The interesting thing is most of the equipment that had been purchased up until recently have not been capable of digital operation. This would entail a huge capital expenditure for new equipment. They will probably simply replace the equipment as needed.

Thanks to Nextel, that timeline is probably closer than you think. Nextel, as part of the retune effort, will problably pay for a large portion of a 9.6K astro upgrade for Harris County. This would include mobibles and portables. Mr. Ebelt is probably licking his chops at the opportunity to replace all of the 15,000+ radios.

FYI in a 9.6K astro system, for the system to operate properly and on 9.6 all users on a particular site must have 9.6K radio in astro mode. Otherwise the system must operate in at the lower baud rate.

Agencies such as Friendswood, Columbus, and Wharton County are all purchasing 700/800 9.6 capable radios. Rumor has it Beaumont/Port Arthur is also purchasing new equipment for Star Net integration. Do not be suprised to see Bryan and College Station to be approached about coming onboard with the system. Bryan is putting in a 9.6 system.

Somehow I don't think the paltry sum offered up by Nextel ... when
spread out over the users affected nation-wide - will be enough; more
like a store-coupon or instant-rebate at best. There's been some
speculation that ... with Sprint taking over Nextel's subscriber base,
Nextel users may find themselves being forced to "upgrade" their phones
to something compatible with the rest of Sprint's network. If Nextel
wants to vacate 800 mhz, let them put their spectrum up for sale instead
of trying to extort new, clean nationwide spectrum from the FCC. [ Yes,
Mr. Hollingsworth we promise to stop interference if you give us ... ]

I *think* the current requirement for new equipment purchases in the
STARNet area is for Astro / IMBE capable radios. Don't know if that
includes 700 mhz.

no less than 4.8 billion right now for Nextel to pay out according to the FCC. I think that combined with some DHS grants will provide plenty of dough to fund this wet dream of Larry Orr's.

to the FCC. I think that combined with some DHS grants will provide
plenty of dough to fund this wet dream of Larry Orr's.

For Type II trunking you have two different baud rates one is 3600 and the other is 9600 (or i forget, is it 3200 or something like that?, that looks right though!). On a 9600 baud rate system, every TG has to be Digital, it is pure P-25. On 3600 baud rate, you can have mixed analogue and digital.

Nextel was for all intents and purposes, told to vacate 800Mhz. The
only questions was what spectrum would they get in return.
It would seem that the Nextel spectrum issue has been decided with the
signing of the agreement last week between Nextel and FCC to vacate
all channels in 800Mhz in favor of Public Service users. In return
Nextel gets two 5Mhz chunks in 1.9Ghz that used to be part of BAS
microwave usage. With the added channels in 800Mhz and opening of 600-
700Mhz frequencies, there seem to be a number of options available to
Police and Fire users, if they have the money. I do not expect that
Nextel will provide much money to them. Nextel has agreed to
$4.85billion to cover costs of moving broadcasters in 1.9Ghz.

I'm not sure there are any agencies in town that would seriously consider a
joint communications venture with us after the last 18 months of media
attention....

If you jog in a jogging suit, lounge in lounging pajamas, and smoke in a
smoking jacket, WHY would anyone want to wear a windbreaker??

"Shallow men believe in luck. Strong men
believe in cause and effect."

It is however, true that if HPD and HFD narrow banded the channels that they currently are licensed on, they could generate sufficient channels to allow significant additional usage. This would especially be true if they chose also to trunk them for public service use. It would not require convincing anyone into a joint venture. The UHF system in use has proven more than adequate in coverage and very robust over a long period of time. Even discounting the politics involved in joining the HCSO trunking system, to allow another agency of comparable size which competes for tax funding to control the communications system of HPD and HFD would be a mistake. From a practical standpoint relinquishing the UHF channels would also be a mistake. Just my opinion of course........

Both of those will work, but what you really need to look at is
RAM(random access memory)the more memory you have the better.

A couple weeks ago someone on this group was inquiring about a skywarn class. found this on the city of pasadena website.

A free Skywarn class will be held on Thursday, February 24th from 6:30 p.m. to 9:00 p.m. at the Fairmont Library, located at 4330 Fairmont Parkway between Preston and Burke in Pasadena. If you are interested in becoming a Certified Storm Spotter, call Pasadena Emergency Management at 713-475-5588 to make your reservation. The class is open to all the public of any age and no previous training is needed. Class space is still available.

Class agenda will include basic weather information, how to identify storm conditions, how to report the observed information, and how the storm-spotting community is organized to operate. Attendees get an NWS manual, Pasadena Skywarn manual, and other general information books on storms.

Skywarn is a program sponsored by the National Weather Service Office in conjunction with local Emergency Management Organization. It is a group of trained volunteers that watch the skies during severe weather and relay reports back to local Emergency Management Official and/or the National Weather Service. These volunteers provide valuable information to the NWS to improve the warning program which could save lives and prevent property damage in your community.

# 8852. off topic post I have 50 GMAIL invites available to give out!

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-23 03:29:22 UTC
From: scanpadotcom
Topic: 8852  Message: 8852

Hey Everyone.

I have 50 Gmail invites to give out!

If you want a Google Mail account with the following free features, please email me off list at pckirk@... Please include First and Last Name and the email address you would like the invite sent to.

About GMAIL

As part of Google's mission to organize the world's information and make it universally accessible and useful, we're testing an email service called Gmail.

Gmail is a free, search-based webmail service that includes 1,000 megabytes (1 gigabyte) of storage. The backbone of Gmail is a powerful Google search engine that quickly finds any message an account owner has ever sent or received. That means there's no need to file messages in order to find them again.

When Gmail displays an email, it automatically shows all the replies to that email as well, so users can view a message in the context of a conversation. There are no pop-ups or untargeted banner ads in Gmail, which places relevant text ads and links to related web pages adjacent to email messages.

Quick Facts

Cost: Free
Storage: 1,000 megabytes
Languages: Only available in English during this testing period, but can be used to send and read emails in most languages
Access: Free automatic forwarding and POP3 access
Supported Browsers:
- Microsoft IE 5.5+ (download: Windows)
- Netscape 7.1+ (download: Windows Mac Linux)
- Mozilla 1.4+ (download: Windows Mac Linux)
- Mozilla Firefox 0.8+ (download: Windows Mac Linux)
- Safari 1.2.1+ (download: Mac)
JavaScript and cookies must be enabled on all browsers

You can only be invited to Gmail by a current user!

This Email service is great for users of Yahoo / Google / Topica Groups.

Thanks.

Peter

No, it just happens than many of the folks involved are hams.
Other folks are city employees or any citizen interested in the weather.
The classes are open to anyone and it's free (well, you really pay for once
a year anyway).

# 8860. RE: [HoustonScan] Skywarn

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-23 17:55:32 UTC
From: Scott Royall
Topic: 8848  Message: 8860

Eric, it functions as a radio net.

My only other question,

Is skywarn only open to ham radio operators?

From: Scott Royall
Topic: 8848  Message: 8861

Hams are general public, fellas. You still must transmit the sightings on
ham frequencies.

# 8862. Re: [HoustonScan] HCEC

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-23 20:21:37 UTC
From: hcec9813@sbcglobal.net
Topic: 7619  Message: 8862

HCEC, now actually HCECC doesn't have Cyfair or Cypress Creek FD. Currently it has virtually every department along the Sam Houston Pkwy from 249 West to the Houston Ship Channel and east to the Harris County line. Included are Aldine Fire, Eastex Fire, Westfield Rd Fire, Northwest Fire, Sheldon Fire, Channelview Fire/EMS, Highlands Fire/EMS, Atascocita Fire/EMS, Cloverleaf Fire, Northchannel EMS, South Lake Houston EMS, Crosby Fire, Huffman Fire, and Harris County ESD 1 and 5 (Both Ems). Hcec now has their new website up at www.hcec911.com, with active cad links to Hfd and HCEC, as well as links to our departments with websites. Yes, I know I think it is cool, since I work there, but it is actually a good site.

Isn't Cypress and Cy-Fair part of the HCEC? If so, why don't their
events show up on the HCEC active incidents page?

Thanks!

From: scanfan02
Topic: 7619  Message: 8863

Yeah, everybody does that, even some SO and DPS units will go (Just an example) "4311 to Houston".

Cy-Fair is dispatched by Cy-Fair (I think, they also dispatch for Westlake and Rosehill)

Cypress Creek EMS and VFD / Spring VFD / Champions VFD / Ponderosa VFD / Klien VFD / Northeast VFD / Little York VFD are all dispatched by the Command Center.

HCEC dispatches for Northwest VFD / ESD #1 EMS and several other VFDs/EMSs for the Northeast part of the county.

No, it just happens than many of the folks involved are hams.
Other folks are city employees or any citizen interested in the weather.
The classes are open to anyone and it's free (well, you really pay for once
a year anyway).

Storm spotters call in reports using an 800 toll free
number which is given after you attend a Skywarn
class.

# 8868. Re: Digest Number 1531...SKYWARN

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-24 00:00:06 UTC
From: JL Geyer
Topic: 8868  Message: 8868

Please allow me to clarify something about the SKYWARN reporting setup.

Yes, many spotters are licensed ham operators, but not all. When the NWS asks for SKYWARN to activate, a call goes out in the Hou-Gal areas using the Saltgrass Link system. This system sets up several repeaters together, so spotters will be able to make contact with a "Net Control Station" (NCS). The NCS will then notify the Warning Coordinating Meteorologist on duty.

At that time, the WCM will make decisions on actions to take, ie. Severe Thunderstorm Warnings, Tornado Warnings, etc. Also, that information MAY be shared with the National Severe Storm Laboratories. All this is done in an extremely short amount of time, since time is of the essence!

If a spotter does not have a Ham radio, he/she may call directly to the NWS via cell, or any other phone. Just as long as the spotter can communicate, that is what matters...BUT...

Make sure you have the training to be out in the field getting reports. Many times, a spotter can be 'trapped', and have no way to get the report back. Spotting can be very dangerous, but if done properly, can and probably will save a life.

Attend the SKYWARN training, take all the info in, and ASK QUESTIONS when you're not sure about something. Hook up with someone who is an experienced spotter, and watch and learn! It's exciting, and as I said before, could save a life.

Jeff Geyer (KD5YLO)
Advanced SKYWARN Spotter

# 8869. RE Skywarn

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-24 01:38:52 UTC
From: celticstorm333
Topic: 8869  Message: 8869

Sorry if this is repeating - I just got this in the digest. I've also been off list for awhile. Hello to all!

SkyWarn is open to everyone. Whereas hams do probably make up the majority of the ranks, there are those of us who are not hams and yes we call in what we see. They give you a number to call 24/7 that goes straight in.

I understand where you are coming from - I had the same questions before someone set me straight. It seems like the first thing everyone asks you when you want to help out is if you are a ham!

Since we are on the subject, are there still classes for beginners to get there ham license?

# 8870. HCSO Ch.10 Info

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-24 03:06:09 UTC
From: Myles Barkman
Topic: 8870  Message: 8870

Heard yesterday that there is no longer a "channel 10" for info anymore for SO.
All inquiries are now done on Central Dispatch talkgroup 14896.
They were usually patching the two together anyway so it won't be much different to them, but for scanner listeners, you can get rid of talkgroup 9360.

# 8871. TG 23312 Waller County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-24 04:34:28 UTC
From: James
Topic: 8871  Message: 8871

I heard some one pop up on TG 23312 and say this is the Mutual Aid Channel and the other unit said ok. I think they were Waller County Units just from the voices but I can't be sure. Has any one else heard anything on this one?

# 8872. RE: [HoustonScan] HCSO Ch.10 Info

To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: HCEC

Yeah, everybody does that, even some SO and DPS units will go (Just
an example) "4311 to Houston".

Cy-Fair is dispatched by Cy-Fair (I think, they also dispatch for
Westlake and Rosehill)

Cypress Creek EMS and VFD / Spring VFD / Champions VFD / Ponderosa
VFD / Klien VFD / Northeast VFD / Little York VFD are all dispatched
by the Command Center.

HCEC dispatches for Northwest VFD / ESD #1 EMS and several other
VFDs/EMSs for the Northeast part of the county.

From: Donald Schaefer
Topic: 8848  Message: 8874

Not true, I have been skywarn trained for a number of years, and you can phone in reports direct to the NWS. I usually work with other HAM operators to collect information , but then in most cases cell phone in findings to the NWS direct storm spotter line.

# 8875. Meetup this weekend

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-24 15:25:09 UTC
From: debbie.sly@verizon.net
Topic: 8870  Message: 8875

Don't foget there is a meetup this Sat from 2-5pm at Memorial Park. An actual meetup place within the park has not yet been determined. Soooo unless someone names a spot to meet then first one there can maybe pick a spot and (somehow) get the word to others on this group.
Yes I will be there unless it turns out to be really crappy weather.
Sly

From: Myles Barkman
Topic: 8882  Message: 8882

Does anyone know anything about the KBR 900 MHz trunk system?
Seems to have been down at least the last couple of weeks.
Has it been scrapped or moved to 800 MHz?
I've noticed less and less loaner use on it with the Houston Marathon folks
using the Fleet Talk Services UHF LTR system.
I'm wondering what the rodeo folks are using this year.

Looks like they do sleep at Memorial Park on Friday night and head out on Saturday. Don't want to be anywhere near there.
Sorry, don't have any other suggestions at this time.
I'm not too worried about weather. Think the rain is supposed to get worse towards evening.

The usual Rodeo satellite parking net, that had been on the KBR system in the past, is active now on talkgroup 0-05-125 on the Houston Two-Way LTR trunked system.

Myles,

I noticed that too, but you beat me to the posting.
My first guess would be the Reliant Park System, since
they are there. My next guess would be the Fleet Talk
Services.

Looks like we have a new quest.

Hmm... can anyone near Baytown check if the KBR system there is off
the air too? It seemed that the Houston system was barely used by KBR
anyway, so maybe they just decided to scrap it. If they abandon it,
it will be interesting to see who ends up grabbing the 900 MHz
spectrum. I have not heard anything Rodeo-related on any of the other
SMRs yet.

Sounds like Memorial park is the place to avoid Sat.

One suggestion- let's go back and review one of those restaurants listed in the last poll (in the polls section) and pick one of those places and meetup there. Any picks?

Yeah, I heard that too after I reprogrammed the system in.
Also heard some activity on 0-12-105 (I think) used by the Rodeo folks.
I have all the loaner talkgroups programmed in.

As for the Baytown KBR site, I checked that too and found nothing.
Their license is good til 2012 so unless they delete their license, it may
stay silent for awhile.

I am a Dispatcher / CAD Administrator at the Cy-Fair Communications Center. We only dispatch for Cy-Fair Fire Department and Rosehill Fire Department. Westlake was dispatched by Cy-Fair for several years but they left in the late 90's and moved to West I-10 Fire Department's Communications Center. They are now at Cypress Creeks Comm Center (aka The Comm Center) and have been there for a couple of years now. Also I was working on Christmas Eve and we did the "santa clause thing" as you referred to for Cy-Fair and Rosehill only. West I-10 FD does thier own version of it and Westlake used to do a version of it, I am not sure if they still do or not.

Date: 2005-02-26 02:37:25 UTC
From: markfrench2002
Topic: 8856  Message: 8904

I think 23632 is Southside Place PD. Can anyone confirm this.

Looks like this is the webpage for Beck's Prime.
http://www.becksprime.com/ie/1001EMemorial.asp
You can see directions and their menu.

They are in the golf course club house at 1001 East Memorial Loop at
Memorial Drive. For those with keymaps, this is in 492K.
For those with GPS, this is near N29d 45m 53.7s, W95d 25m 55s.

With the trail ride going on, I don't know what kind of mess it will be
getting to it or for parking.

Light rain (here in Pasadena) with heavier rain coming in from west so be
prepared to run inside. Looks like Sly will have a wet commute from Bryan.

Correction, 0-12-125 is Trail Ride. They must be scratching ride groups
that were no-shows.

Thanks for the info Steve . I didn't know that the Metro Officers are using the MAP channel. It's funny that they forget to tell us what channels to monitor. They give us a 6 min. goal to respond , but don't tell us which of the 20 or so radios we need to monitor. I wish they would GB all SAFEclear calls over SO Ch. 7 so we could concentrate our attention on just one radio.

Correction to the position of the restaurant.
Sly is there and reports that it is located at E Memorial Loop and Memorial Loop Drive.
This is near Haskell Street according to my map program.
This puts it at Kepmap 492-F, just to the left of the "F" in the map block.
Corrected coordinates now are N29d 46m 23.8s, W95d 25m 57.9s.
Appears to be plenty of parking and no traffic problems.
Will be leaving the house shortly.

Just heard a unit make a traffic stop in the 3900 block of Bellaire.
It sounds like their console in the background, too. No multicast on
the UHF channel, though, but I guess it wouldn't be necessary since
they have, what, two cruisers? I wonder now if the UHF repeater is
going to go to FD.

Subject: Re: [HoustonScan] Meetup this weekend

Correction to the position of the restaurant.
Sly is there and reports that it is located at E Memorial Loop and Memorial Loop Drive.
This is near Haskell Street according to my map program.
This puts it at Kepmap 492-F, just to the left of the "F" in the map block.
Corrected coordinates now are N29d 46m 23.8s, W95d 25m 57.9s.
Appears to be plenty of parking and no traffic problems.
Will be leaving the house shortly.

You may have heard Bellaire PD or Hou PD in the
background. W. University is on Starnet. Small
departments are hard to pin down sometimes. I wonder
what the new MAP system frequencies will be.

Sorry, that wasn't what I meant. When Southside's console keys, it has
a distinctive tone to it; it almost sounds like a fan running in the
background. You could hear this both on VHF and on UHF. There wasn't
any radio traffic from any other agencies running in the background.

It sounds like they just changed their pager tones. They just dropped
a general tone and announced that anyone whose pagers hadn't been
reprogrammed would need to leave them "open" to receive any traffic.

OK, after doing some digging, found this possibility.
461.800 repeater with DPL 432 on 400' tower about 2 miles north of Spring.
This repeater is also used by HCESD-1 (Westfield, Aldine, Eastex) VFD as
EMS-3.

Subject: Re: [HoustonScan] Meetup this weekend

Correction to the position of the restaurant.
Sly is there and reports that it is located at E Memorial Loop and Memorial
Loop Drive.
This is near Haskell Street according to my map program.
This puts it at Kepmap 492-F, just to the left of the F in the map block.
Corrected coordinates now are N29d 46m 23.8s, W95d 25m 57.9s.
Appears to be plenty of parking and no traffic problems.
Will be leaving the house shortly.

I don't think it is EMS-3, I was scanning that and didn't hear
anything on it. It could be EMS-4 like someone already said.

EMS-4 is the same frequency, 461.800, except they use simplex on the output
so you would have to be close to hear them.

# 8934. Bush Airport

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-27 23:25:58 UTC
From: Myles Barkman
Topic: 8934  Message: 8934

Got some questions for folks with knowledge about IAH.

Will the TerminaLink be expanded from Terminal A at some point?
Looks like it now runs between the Terminal D/IAB area, Terminal C and
Terminal B.
Currently, buses run from B to A.

Information I've gathered makes it appear the monorail is run by
Continental. Can someone confirm this? Perhaps this is why the talkgroup
doesn't fall inside the regular Houston Airport talkgroups.

# 8935. Re: [HoustonScan] Bush Airport

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-02-27 23:54:22 UTC
From: Eric C. Carlson
Topic: 8934  Message: 8935

It will eventually be extended to A, but I don't believe there are any current plans to do so. I imagine that it will be included in the next master plan that is currently being developed. The train was built by Bombardier Transportation in combination with various other contractors. It connects B, C, D and E (combined single station for D/E).

Continental provides the shuttle buses (they contract with Momentum Air), to connect terminals A, B and C, since their SkyTeam partner Delta is in A (Delta is rumored to be moving to C after the C renovations are complete; if that happens the bus service will likely end). The Momentum Air buses also are used to pick-up passengers from the Continental Connection prop flights and Continental Express flights that don't park at a jetway or sometimes park at a free gate at terminal A.

I doubt the TerminaLink is run by Continental. I suspect its owned by the airport and operated under a contract with Bombardier.

From: Michael W. Jones
Topic: 8934  Message: 8936

Myles -

You are correct on the second statement. Continental put the Automated People Mover (It's not actually a monorail) as a convenience for passengers connecting to/from ExpressJet (d/b/a Continental Express) and Northwest Airlines flights in Terminal B to Continental and International Flights in Terminals C, D, and E.)

The system is actually maintained by a Houston Airport System contract with the builders, Bombardier Transportation (http://www.bombardier.com). Since Continental's 10-channel. 23 (known) talkgroup EDACS system is already very busy, and is for "company use only", it was easier for Bombardier to use the Houston Airport System's trunked system, and likewise move to StarNET with them last year.

Since the TerminalLink is now effectively the Airport's, and not Continental's, (Continental paid for the original B to C shuttle, and the expansion to D, E and FIS), it would be up to the Airport System to expand it further. The system is designed for expansion at both ends, so anything is possible.

There is always the underground train (aka Mr.. Toad's Wild Ride) that connects all the terminals and the Marriott, but that requires passengers to exit security and re-enter security at the destination terminal. With some SkyTeam partners (Delta) in Terminal A, the discontinuance of the Momentum Air shuttles by Continental is not probable. That of course could change when the 490D (Terminal C Concourse Renovations) and the upcoming 490K (Terminal C Ticketing and Baggage Claim Renovations) are complete.

I confirmed 2 of 4 LCNs for the Toyota Center LTR:
01 451.35
06 452.45
Other freqs: 463.65, 464.35
http://www.ericcarlson.net/scanner/houston/toyotacenter.html

Toyota Center conventional:
Ticket Takers? 461.7 M [74.4]
Unknown 464.375 M [94.8]
(It appears that they are using the conventional freqs from one of the original applications when the Toyota Center first opened; see FCC application 0001216575.)

Hilton Americas hotel uses 451.9875 R [67.0] and at least one other unknown channel.

I also confirmed that there is an LTR system for the Houston Center complex downtown:
03 451.9375
Other freqs: 452.05, 452.65, 464.425, 464.85
http://www.ericcarlson.net/scanner/houston/houstoncenter.html

That came about when the mayor went to Austin to beg not to have the whole
program tossed out. Thrown together at the last minute.

It's funny that they forget to tell us what channels to monitor. They give us
a 6 min. goal
> to respond , but don't tell us which of the 20 or so radios we need to
> monitor. I wish they would GB all SAFEclear calls over SO Ch. 7 so we could
> concentrate our attention on just one radio.

All Safe Clears should be gb'd on 7, but the 6 minutes doesn't start until
somene at Transtar calls the wrecker dispatcher for that segment on the phone
and advises them of the call. That almost never happens, I've seen them wait
for over an hour for one becuase nobody knows that's the rule (even most of
the people at Transtar). Nobody is going to get dinged for a 6 minute violation
if they keep running the show like that.

Steve

If you jog in a jogging suit, lounge in lounging pajamas, and smoke in a
smoking jacket, WHY would anyone want to wear a windbreaker??

It is old terminology that we actually are not supposed to be using anymore

M Male
F Female
1 less than 12 hours since death
2 12-24 hours since death
3 24 or greater hours since death or special handling required

It was used to notify the ME or funeral home about the body; however, since we haven't done that in forever it was changed a while back to that we just tell them we have a DOA. I would say some habits never die but it seems even the newer people are doing it.

Erich

# 8946. BOLO issued by Deer Park PD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-01 19:41:52 UTC
From: spyderm1978
Topic: 8946  Message: 8946

not sure if anyone was listening or not, but hear the tail end of a BOLO issued by DP PD, wasnt paying much attention till the end, apparently there was a 18 wheeler stolen from pasadena today, trailer supposedly filled with "highly flammable material" only description i caught was a white mack truck.....

# 8947. Re: RE: [HoustonScan] Cy-Fair VFD and 10-50

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-01 23:12:18 UTC
From: Myles Barkman
Topic: 8941  Message: 8947

If that were the case, could the vehicle have been off a road to have not
been noticed for awhile?
Or was she a DOA passenger at the time of the MVA?
Or, could this be one of those "special handling" cases (bleh)?

So many questions...

# 8948. STAR-Net testing

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-01 23:22:42 UTC
From: Myles Barkman
Topic: 8948  Message: 8948

Heard someone doing 5-counts on TG 23760 just awhile ago.
Will have to wait and see who pops up on here.
As for Southside Place PD, have not heard any activity on their old UHF
460.275 MHz.
So perhaps they have fully moved to TG 23632.
Wonder what if anything will happen with City/Fire on 154.980 MHz.

as far as southside place goes, i have a friend that works part time for them, he confirmed with me that they are indeed moved over to star-net.
they still have 400 radios in their vehicles however to communicate with HPD and Bellaire....

For the time being, FD is still on VHF. I heard a fire alarm call drop
on there the other morning.

From: David
Topic: 8937  Message: 8951

I am the Communications Officer for West I-10 FD. We have 2 channels on Starnet and 2 on the Missouri City System for back up use. Those two that you listed may be the channels on the Mo City system. They are rarely used. We have had those channels for many years, prior to West I-10 going to starnet. They were our backup channels if our own conventional 800 system were to go down. The main reason we still have them is in the hopes that Mo City will merge with Starnet and that will give us 2 more channels on Starnet. We still have our own 800 conventional system that we primarily use for unit to unit traffic, training or in case of a complete starnet failure. Below is the list of our channels.

15728 3D7 West I-10 FD Ch.1 (Starnet/Simulcast 155.295 MHz)
15760 3D9 West I-10 FD Ch.2 (Starnet/Tac Channel)
45200 B09 West I-10 FD Ch.3 (Missouri City)
45232 B0B West I-10 FD Ch.4 (Missouri City)
855.9625/810.9625 West I-10 FD Ch.5 (West I-10 owned)Repeated
855.9625/810.9625 West I-10 FD Ch.6 (West I-10 owned)Simplex

According to Myles info the 2 channels that you listed are proposed channels. Don't know if that is our channels on the Mo City system for conversion to Starnet or not.

15664 3D3 "Proposed" VFD A
15696 3D5 "Proposed" VFD B

# 8953. HPD, a Limo & Black Suburbans

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-03 03:04:43 UTC
From: celticstorm333
Topic: 8953  Message: 8953

Around 6pm tonight, I saw HPD escorting a single limo (no flags), 1+ black surburbans (with light bars), & numerous black vans driving west bound on Memorial. I did see in the mirror that they continued underneath 610W.

Also, I saw nothing out of the ordinary on the roofs of the van and there were 7-10 HPD units.

Anyone hear anything?

# 8954. Re: [HoustonScan] HPD, a Limo & Black Suburbans

George Bush(#41) has an office a couple miles west of 610 west loop on
Memorial & Chimney Rock(10000 Memorial 6th floor).
That's my guess.

Around 5 ish, it was reported that an escort was on the south loop westbound
from 225. Heard this was a king and queen of something.

All hale Google!

http://www.norway.org/houston/norskearrang/kongebes%C3%B8khouston.htm
Looks like they must have been leaving Pasadena or the Port of Houston.

Later they run off to see Bush in Washington.
http://www.whitehouse.gov/news/releases/2005/02/20050215-5.html

While they are in town, listen for related activity on HPD Ch.B9 460.400 and
State Department 409.625, 407.600 and 408.600 MHz.
Lots of out-of-town VIPs stay at the Inter-Continental Hotel near the
Galleria.
Try these out:
451.850 Catering
461.200 Information Technology
461.800 Housekeeping
462.350 Special Events
463.350 Security/Engineering/Operations
464.275 Special Events

They are not ours

Those must be listed wrong because those are not any TGs in my radio. We only have 4 TRS TGs for the FD and 3 for EMS and 2 of those are on Missouri City's TRS.

Jay

# 8957. ATCS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-05 01:03:09 UTC
From: rmeyn57
Topic: 8957  Message: 8957

does anybody know if any of the ATCS (advanced train control systems)
frequencies are active in the Houston area?

# 8958. Rebanding on 800 MHz and 406 MHz

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-05 01:36:46 UTC
From: Steve Nelson
Topic: 8958  Message: 8958

Beginning this year, most trunked systems
both civilian and federal/military
will be rebanded. Everyone will need
to keep up-to-date on the frequency
changes.
http://www.apco911.org/frequency/QA.htm
http://www.detrick.army.mil/news/news.cfm#pr3
Land Mobile Radio systems on many military bases around the
country currently are or will be transitioning to frequencies
in the 380-399.9 MHz band
http://www.macom-wireless.com/federal/p25.asp
By mandate, many Federal LMR users have only until 1 January 2005
to transition existing VHF systems from 25 kHz wideband channels
to 12.5 kHz narrowband channels.
UHF wideband users (406.1 - 420 MHz) have until January 2008 to make
the transition. DoD users in the 380-399.9MHz band are migrating to
narrowband in compliance with DoD LMR Policy, dated 1 August 2001.

# 8959. Re: [HoustonScan] Win95 file for houston area

Yahoo group: HoustonScan (2005 — 2006)

From: James Sitton
Topic: 8898  Message: 8959

Did you ever find a .p95 scaner file. I just notice your message.

I downloaded the ones from the files section. Then I joined the yahoo PRO95 group and found some over there. I have sort of made combinations of several peoples files. I don't listen to the houston stuff a whole lot there is just too much. I bought my scanner in Richmond, TX so it came programed with a lot of Fort bend county freq. I added my Waller County feq. ( they just moved to the Harris County Starnet system) downloaded some Montgomery county ones.

I still don't quite have it the way I want it, but have not had the time to work on it some more

Let me know if this helps or if you need my file.

James

From: elentz1
Topic: 8958  Message: 8960

I think the transition has been extended several years before
anything will be required. Some as much as 10 to 15 years.

Check this link.

http://www.800mhz.gov/index2.html

Nextel has yet to agree to some of the requirements, TV stations
have not made the switch to total digital. Congress is getting cold
feet on requiring nothing but digital on the TV switch by the end of
this year.

Topic: 8957  Message: 8961

It appears they are.
Doing some research to find out what this was, I stumbled on this which may be interesting to some:
http://www.atcsmon.com/
Here are the frequencies for this data system:
http://www.atcsmon.com/frequencies.html
935.8875 MHz seems to be quite active (at least from what I can hear from my house).
Depending on how close you are to the trains, you can hear them on 896.8875 MHz.

Interesting that 935.8875 MHz or any of the frequencies for ATCS are not even licensed in the Houston area.
The only licensed systems are between Waco and Fort Worth.

I vaguely remember seeing something to the effect of a nationwide
license with the FCC. I have no idea how you'd find it the FCC database.

Looks like the nationwide license is WNUT730.
So there is no way to find out where the individual towers are. Guess there
are hundreds or thousands of them.

thanks for the info. I don't hear any activity on 935.8875 in
southwest houston but maybe I need a better antenna. I got
interested in this from article in Montoring Times March 2005 issue.

# 8966. Re: [HoustonScan] Re: ATCS

Looking at a map of that area, these are the tracks I see:
SP (UP) lines that run north/south parallel to Stella Link * along
US90/Holmes Rd.
HB&T lines that run from near Holly Hall to near downtown Houston.

Don't know who owns these lines now or even which are still active.
This map roughly indicates where the ATCS service exists. Don't know if it
is only along certain lines in Houston.
So I would look at these freqs for the best chances of activity:
935.8875
935.9875
936.9875

Data is short bursts and you may have to turn your squelch off to hear them.
If you wanted to decode the data with the program, you would probably need
to hear them OK and not just barely.

# 8968. RE: [HoustonScan] ATCS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-05 17:43:12 UTC
From: Michael W. Jones
Topic: 8957  Message: 8968

ATCS is active on the BNSF Galveston Subdivision, on the Galveston Island bridge, and from Algoa north. Also can be found on Mykawa Subdivision, from Alvin to Golfcrest Start Sign. All other BNSF territories in the area are Track Warrant Control, and not on the air.

UP is using it for engine telemetry, and I've been getting reports that they might have started using it around Port of Houston. I have not done any monitoring to see if that's the case. Most areas around Houston, UP is using a system called Genesys (sic), which rides on different frequencies in the 800/900MHz bands. Genesys is also highly directional, using parabolic or yagi antennas. ATCS is primarily Omni-directional, using Fiberglass enclosed antennas.

If you're really interested in it, check out ATCSMon at www.atcsmon.com. Or, contact me off-list, and I can give you a demonstration.

# 8969. DPS closer to digital

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-05 18:53:16 UTC
From: Myles Barkman
Topic: 8969  Message: 8969

Someone reported in the DFW area this morning that they are possibly hearing DPS using P25 digital on one the repeaters just outside Fort Worth.
They are getting closer and closer to changing over to P25 in the metropolitan areas.
This is one the repeaters used by DPS Wichita Falls and transmitting from Decatur.
The analog repeater was on 159.210 MHz and the new P25 repeater is on 156.2175 MHz.
So that may be one to listen for in this area

Since we're on the subject of DPS, I still have not been able to confirm use of a repeater licensed on 159.210 on the Baytown Bridge.
The local ones I can pick up are the one in Texas City at the DPS office and the one at the DPS office off West Rd/290.
There are several other transmitters licensed that I have not heard such as in Danciger in Brazoria County, Willow Springs in San Jacinto County and one in Dayton.
It appears that the one in Texas City at the DPS office is to move to a new tower in Hitchcock that is a little taller. It may have even been moved already. Can someone down there confirm? The tower should be behind a Jack-in-the-Box near FM 519 and Hwy 6. If you can hear 159.210 without an antenna, in may be in operation. That's about 3 miles south of the present (older location).

From: bones boy
Topic: 8970  Message: 8970

...from www.ktrk.com ...

Officers, dispatchers suspended for 'inappropriate' messages

By The Associated Press

(03/05/05 - AUSTIN, TX) ☐ Five police officers and four dispatchers were suspended for what Police Chief Stan Knee called "inappropriate" computer messages sent after an Austin nightclub caught fire.

A sixth officer received a written reprimand.

Authorities said Austin police officer John Lengefeld heard a radio transmission shortly after 7 p-m February 18th that the Midtown Live nightclub was on fire.

Documents released yesterday indicate the seven-year department veteran said he immediately thought of the song "Disco Inferno" and sent a message from his patrol car to fellow officer Josue Martinez that said "burn baby burn."

So began more than two hours of messages that led to 15-day unpaid suspensions for Lengefeld and officer William White, who sent a note that described the fire as -- quote -- "the smell of victory."

At one point during the flurry of messages, records show dispatcher Susan Negron wrote -- quote -- "I have some extra gasoline if they need it."

It's been that way for years. When the Texas City dispatcher talks to a unit on the Angleton transmitter, she also talks through the Texas City transmitter on 159.210.
I wonder if DPS is going to keep those transmitters on 155.685 in Angleton and 155.535 in Richmond when they start going to P25.

VF Factory Outlet in La Marque and Waller:
461.3375 (this is one used in San Marcos outlet)
464.5626
466.3375
469.5625

City of Dickinson:
453.250 renewed 2 weeks ago. They have been on Galveston County trunk.
What do they need this freq for?

Clute VFD:
155.415 (heard this ID before 2pm)

Pearland ISD:
464.175
463.375

Fort Bend Co Toll Rd Authority:
900 MHz EZ Tags (are these compatible with HCTRA?)

Houston PD:
460.150 on Clodine tower
453.900 on North side of Houston (was used by Hobby/Ellington)
are they planning on dumping 453.700 MHz or changing it's use?

Stafford Centre:
453.825 convention center/arts theater

LCRA-Fieldstore between Hempstead and Magnolia: (EDACS trunk)
939.475
936.200
936.9125
938.1625

Monaville VFD (south of Hempstead):
154.205

Brookshire:
158.9625

Hempstead FD:
154.175 (was a temporary license from July '04 to January '05) any more
info?

Well, they get on there to coordinate with Chambers County on major accidents or maybe to have them run some tags.
Actually, they may even be using TG 46768 and coming through on 155.805 when it is patched.
What does DPS use for traffic stops on I-10 from Baytown on towards Beaumont?
They might be able to hit Texas City 159.210. Think they use Chambers County SO.
When they get the Dayton repeater up, they won't have to do that.
All these other DPS repeaters may be waiting for P25 to be implemented to reduce interference.

HI Myles,
From Baytown to Winnie, they use Chambers County, 155.805. East of Winnie, to Beaumont, which is in Jefferson County, they use 155.46 base/154.68 mobile and of course 155.460 car to car. East of Beaumont to Orange, state line, not sure what they use, whatever Orange County SO is on. Used to be 460.200 but that was 20 years ago. Jefferson Co SO is still on 460.500 and Beaumont FD is still on 154.400

For the most part, DPS in Chambers County uses L/E 2 (46448) and they
do hop on Old Primary from time to time. I had the unfortunate luck of
getting stopped by DPS on the way to Bolivar from Winnie in '03, and
the officer was carrying an MTS-2000 and running traffic on L/E 1. But
now, most of their use seems to have moved to L/E 2; I frequently hear
Chambers calling for DPS units on that channel.

-Josh

btw, anyone have the new DPS channel plan with the P25 frequencies?
Reports from the D/FW guys seem to indicate they're implementing P25
on new 6.25 kHz split frequencies.

# 8982. RE: [HoustonScan] freqs to check for

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-06 21:32:01 UTC
From: Michael W. Jones
Topic: 8975  Message: 8982

You confirmed my information Eric. I have a master list of all of the frequencies that Continental uses at IAH (I have the names for all 23 talkgroups, but not the actual talkgroup numbers - I've spent a month logging while on temporary assignment at the airport, and am now trying to piece the rest of the trunked system together.) and 121.625 is not on it.

Subject: Re: [HoustonScan] freqs to check for

That freq is for ramp control, however as of the end of January when I last checked, it was not in use. The old ramp control freqs were still in use.

From: Myles Barkman
Topic: 8970  Message: 8986

Fox 26 News actually did say this in their report last night.
But get this, that made it only the 5th most visited bar for complaints. So four other bars had more complaints than that.

We could add the other four as possible future locations for the next
meet-up.

Or maybe not.

Look on Myles' List under Pasadena Trunk, these are some good channels to listen to

Patrol 1 - PPD Dispatch
Patrol 2 - Registrations and Warrants
TAC 5 - Tactical Channel

Fire -1 PFD DIspatch
Fire -2 Fireground
Fire Command - 1 Fire ground

Ambulance - 1 EMS Dispatch (Sometimes labeled as EMS 1
Ambulance - 2 EMS Secondary channel

Deer Park Fire -1
Deer Park Police 1
PISD Police -1
PISD Police -2

Just because some people don't like them????? I never read anything in the print out that had anything to do with race. They voiced an opinion about a place that wastes time and effort. A place that they can't close down. so when something happened to it they were glad. If I had to respond to a place like that just because the drunks can't control themselves I be damned happy if it burned, and wouldn't be afraid to tell anyone who'd listen. People want the police to do every thing for them( most won;t admit it) and then will turn around and raise cane I things don't go their way. Well, welcome to the real world.

# 8992. RE: [HoustonScan] Win95 file for houston area

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-07 21:49:22 UTC
From: Jason Russo
Topic: 8898  Message: 8992

Hi James, well right now the file I made has been the best one so far. Someone sent me one but it was for pasedena. I was hoping someone just had a kick ass houston .p95 file because it was starting to take alot of my time putting in the talk group names. ( looks like we both don't have time but want a good file! ) .

I have all the HPD stuff in and I agree there is just too much traffic to even be able to follow anything. I really like the whole trunking system, however I get terrible reception inside my house. I did buy the 800 mhz radio shack antenna, and it does seem to help when out and about, but still nothing at home ( inside at least). I am mainly interested in listening to the sheriffs dept and constables in my area ( west houston, bear creek area).

Radio shack only programmed mine with the national list stuff, no trunking, so all I have is the starnet system downtown programmed. I would love to take a look at your file and I will send you mine too , maybe I have some talk groups in there you haven't programmed yet. Thanks for the reply

Jason

Subject: Re: [HoustonScan] Win95 file for houston area

Did you ever find a .p95 scaner file. I just notice your message.

I downloaded the ones from the files section. Then I joined the yahoo PRO95 group and found some over there. I have sort of made combinations of several peoples files. I don't listen to the houston stuff a whole lot there is just too much. I bought my scanner in Richmond, TX so it came programed with a lot of Fort bend county freq. I added my Waller County feq. ( they just moved to the Harris County Starnet system) downloaded some Montgomery county ones.

I still don't quite have it the way I want it, but have not had the time to work on it some more

Let me know if this helps or if you need my file.

James

# 8994. officer suspensions

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-08 01:04:26 UTC
From: r e goldy
Topic: 8994  Message: 8994

I disagree, the officers violated a code of professional conduct that whether written or not is incumbent on those who choose to become LEO. Personal opinions whether warranted or not, have no place on the communications systems of the agency. That may have been one of the worst places in the city for violations of all varieties. It matters not, in the duty that they have agreed to perform.
They are free to discuss among themselves and to express negative or positive opinions as they choose, but not on the MDT's or on the 2-way.

# 8999. Pearland

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-09 23:24:30 UTC
From: Myles Barkman
Topic: 5030  Message: 8999

Noticed in one of Pearland's licenses that was renewed a couple of years ago, KFI512, that a repeater on 155.490 is still being carried on the license.
Does anyone know of any continued use of this frequency for Pearland?
What was it used for before?

Also, on the subject of Pearland, does anyone know of any use of the low band repeater they have licensed on 45.280 MHz KRG629?
It holds the same license as their EMS repeater on 153.860 MHz so maybe it's from the old low-band fire days.
License shows 80 mobiles on low-band as opposed to 50 on hi-band.
Sometimes, these low-band radios are used for civil defense sirens but there would be no need for a repeater for that use.

# 9000. Pasadena trunk system changes

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-09 23:40:16 UTC
From: Myles Barkman
Topic: 9000  Message: 9000

Just a quick note that changes are a comin' to the Pasadena trunk system.
They have been operating in a pseudo-STAR-Net configuration for months now
since the downtown system was dissolved.
In the next month, it is supposed to be fully converted into a regular
remote STAR-Net site.
Radios will be reprogrammed and new talkgroups will be created for Pasadena
operations.
Radio coverage in the far southeast reaches of Pasadena are still a bit of
an issue (especially for hand-held radios).
Supposedly, the League City system will be integrated into STAR-Net in the
future as well which will greatly help that situation. It is still
presently only a 5-frequency trunk system so they are looking at adding 5
more frequencies to that system to handle the additional load.

Never a dull moment.

Also, folks that listen to the Pasadena system might note that Private Calls
will be going away as most remote sites used by STAR-Net are not set up to
support that feature due to loading issues. So much for the juicy
behind-the-scene details.

Today I had a chance to listen to my scanner. What happen really shocked me but stuff happens on all airlines.
What happen, a airplane was coming in for landing to Hobby Airport in Houston Tx. The plane lost all commication radios. The pilot used his/her cell phone to ask for permission to land a boing 737. The air traffic control closed all airtraffic until the plane landed. The airtraffic control said on the radio, thank god for cell phones.

From: meldrak_nailo
Topic: 8898  Message: 9005

Hello Everyone,
I am a 26 year old college student and my name is Joel. I am new to scanners and live in the clear lake area. I joined this group to find out more info on things I don't understand yet and I was also hoping to get some pro 95 files for my scanner.
James, I would love to get your win95 file. That would be exactly the sort of thing I am looking for to get started.
I have a nice file for the austin/new branfuls / satler / san marcos area if anyone needs it. It is for travelling from houston to canyon lake to san marco to austin and back to houston. I tend to go between these cities a lot.
I look forward to speaking and perhaps meeting with all of you in the future!
Joel

--- In HoustonScan@yahoogroups.com, James Sitton <jsitt@y...> wrote:
> Did you ever find a .p95 scaner file. I just notice your message.
>
> I downloaded the ones from the files section. Then I joined the yahoo PRO95 group and found some over there. I have sort of made combinations of several peoples files. I don't listen to the houston stuff a whole lot there is just too much. I bought my scanner in Richmond, TX so it came programed with a lot of Fort bend county freq. I added my Waller County feq. ( they just moved to the Harris County Starnet system) downloaded some Montgomery county ones.

# 9007. STAR-Net P25

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-11 23:18:29 UTC
From: Myles Barkman
Topic: 9007  Message: 9007

Anyone happen to catch the P25 testing that was going on this afternoon on STAR-Net talkgroup 60000?
Heard several key-ups and test counts.
I've heard this talkgroup used before but didn't have the digital scanner at the time.
Was just as boring with digital but at least I could confirm that it was not encrypted.

# 9008. Mystery plane landing at Ellington

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-12 01:17:53 UTC
From: Cliff
Topic: 9008  Message: 9008

Friday afternoon about 4:25 I saw a two-engine transport fly over
my house in Dickinson.

It had a grey military-like paint job and looked like a 767 or
similar.

When I heard it going into Ellington on 126.05, the callsign sounded
like "OPEC54 heavy".

I know the Air Force is supposed to get KC-767 tankers eventually.

Any idea what I saw/heard and what the callsign really was?

There were twon in the area today. I live down in league city under the approach gate for the north rnwy at EFD. One was an old KC-10 and the other a 767, don't know if it is desinated with KC but it was a refueler. Did catch me off guard to see a 767 refueler though. Could see the refueling boom in the rear.

Hopes this helps.

Thanks.

I did a bunch of searches but never found it before I posted.

OPEC seems like a strange callsign considering its other meaning.

# 9016. Not so stupid question.

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-13 18:24:49 UTC
From: Tom Hughes
Topic: 9016  Message: 9016

In as much as there is no such thing as a stupid question, let me ask:

Does an antenna mast have to be metal??

Another question: On the DPS operation, I only seem to hear the dispatch side of the transmissions. Is there two frequencies in operation from car to dispatch and back??

Speaking of the DPS dispatch. Always hear "NO 29" when they are running drivers license checks. What is a "29"

TIA, Tom in Tomball.

Q1i do not thank that it wood matter as long as the antana is groundid corectly . Q2 DPS houston is on a duplix system 154.680 moble to base , 155.460 base to moble . if you here the moble he must be near by.Q3 a 29 or a 10-29 is a APCO code that means check records. a10-27 is request drivers licence info a 10-28 is request vehicle registration info. hope this helps

Tom Hughes <t.hughes@...> wrote:
In as much as there is no such thing as a stupid question, let me ask:

Does an antenna mast have to be metal??

Another question: On the DPS operation, I only seem to hear the
dispatch side of the transmissions. Is there two frequencies in
operation from car to dispatch and back??

Speaking of the DPS dispatch. Always hear "NO 29" when they are
running drivers license checks. What is a "29"

TIA, Tom in Tomball.

I think "No 29" means the vehicle and or person is not wanted. If they say "10-99" that means the person and or vehicle is wanted. If they do a tone and then say "10-99 5 times out of Precint 1" or whatever, the added tone means it is a felony warrant (I think). DPS is wierd in the way they do there 10 codes, they follow the APCO codes on some of them, then makes some different.

From: Eric C. Carlson
Topic: 9019  Message: 9019

Yet another LTR system confirmed in use by Deerbrook Mall.

LCN 01 is 452.1125

The other frequency should be 451.7625. They apparently turned off
the idle data bursts on both frequencies.

Hey guys,

I am working on my first scanner file for Galveston and Harris County and I came across the Galveston Trunked System. I was trying to program the talkgroups into my Pro-95 and they are not in the proper range. I do not fully understand trunked systems yet so please bear with me and explain what I may be missing in understanding how to program in Galveston County. Perhaps my scanner just isn't good enough for their system? Thanks for your time guys.

Date: 2005-03-16 14:03:01 UTC
From: meldrak_nailo
Topic: 6422  Message: 9023

Hello again everyone!
I appreciate all the answers I am getting to my personal e-mail but perhaps I did not explain myself correctly.
I fully understand how to input trunked systems. I am using win95 and I have been listening to starnet and the league city trunked systems as well as some austin and san antonio systems while I was on vacation last week.
The problem lies with the Galveston County system only. The talk group id's are too high of a number. For example:
49616 C1D *Clear Lake Shores
49712 C23 *Dickinson PD 1
49744 C25 *Dickinson PD 2
If I try to input either the talkgroup id 49616 or the hex id C1D win95 tells me that that value is outside of the range that is allowed. It will not let me put in a number over 2100 or so.
This is what I am referring to. Again I appreciate all the step by step instructions on how to program id's but that is not what I need.
I need someone to explain why the Pro-95 and Win95 will not allow a talkgroup over 2100. There are many systems around that have talkgroup id's over that number and I want to listen to them too.
Thanks,
Joel Janssen

Okay I figured it out and here is what it was for future reference:

I did not have the "Type" Drop box set to MOT, I had it set to conv. Once I changed it to MOT I was able to set all of them fine.

I attached a small jpeg screenshot of the actual error message it gave just so anyone who gets this question in the future will be familiar with it.

Thanks again y'all. The help was greatly appreciated.

I was working and watching the construction on I-10 at Fry Road. Now, I perviously worked road construction so i was wondering how on earth they communicate from one site to another a few miles down the road? The company I used to work for used Nextels to communicate from site to site and with other companies and what not. So, as I watched and recalled the days... I was wondering if they used a radio system or if they were Nextel also?

# 9029. RE: [HoustonScan] Been Thinking...

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-18 05:34:08 UTC
From: Michael W. Jones
Topic: 9028  Message: 9029

My father retired from construction, and I work in communications (alas, landline, not mobile-radio), so I can offer some insight.

Most construction companies will use the simplex itinerant frequencies for their construction sites - i.e. coordinating material movements and placement, etc. They use Nextel more for management - i.e. telling Joe driver to bring the truck in at X time.

The reason most companies are on the itinerant frequencies, is there is enough lag in the Nextel network (even if you're 5 feet away, there's a noticeable lag, since all communications still have to go to a cell tower and back.) that the delay could mean missing a precision movement. Since a construction company is only going to be at a site for a period of months, most will not get an FCC license for that short term. They get an long-term itinerant license, which covers an entire metropolitan area, on any of the "dot" channels.

Some companies have licensed a specific group of frequencies for a metropolitan area, so they don't have to switch channels when there's interference. They have the license, and there shouldn't be anyone else on it. My father's employer did this, and we couldn't use the radios where we lived, since there were other users on the frequency (since we lived outside the licensed operating area).

# 9040. BP Plant Explosion - Texas City

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-23 19:42:19 UTC
From: Brian Berlin
Topic: 9040  Message: 9040

Rocked my building in Galveston about 1:25pm today
there's a photo I took here
http://www.seashanty.org/lj/bp_explosion.jpg
news has just picked it up.

# 9041. Plant explosion in Texas City

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-23 19:50:15 UTC
From: Josh W.
Topic: 9041  Message: 9041

Unsure of which facility. Heard Union Carbide at first, but Sterling (154.070) put it at an elastomer facility "off site near BP". Texas City and La Marque responded, with Hitchcock on standby but it sounds like they're responding now. Santa Fe is also en route and contacting Alvin. Galveston also made the comment that the wind was carrying the plume over their city. Ops on 55184, 53904, and 54576 on Galveston trunk.

Weird stuff on 155.460(DPS) this morning. Not only is the skip in (
heard Corpus, Kerrville, Austin, Tyler) but also was hearing the units
talking to the dispatcher on 155.460. Normal input is 154.680. Wonder
what is going on? Any ideas?
Dwayne

# 9051. Re: [HoustonScan] Re: Comms on 128.850 MhZ at Texas City BP

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-24 17:15:04 UTC
From: Eric C. Carlson
Topic: 9047  Message: 9051

From my monitoring, 128.85 is never patched to STARNET. The Life Flight dispatcher (only) simulcasts on both the STARNET talkgroup and 128.85. 128.85 is used by non-Life Flight medevacs and occasionally by Life Flight pilots to talk to the dispatcher at Hermann, but so far as I can tell aircraft on 128.85 have never been patched to STARNET. This occasionally creates a problem where aircraft on 128.85 step on transmissions on STARNET (or vice versa) from the perspective of the dispatcher.

128.85 is more commonly used now that SkyMed is operating in the area. SkyMed will give patient reports to Hermann on 128.85 when they transport patients there. You will also hear out-of-town medevacs such as Critical Air on 128.85 when they transport to Hermann. Sometimes helicopters will contact Hermann on 128.85 for safety purposes even if they are going to a hospital other than Hermann in the Medical Center.

It does happen on rare occasions. About a year ago I monitored Lifeflight simulcasting on Starnet, 128.8500, and HAHEARN. It wasn't a test, since the Flight Nurse giving patient info to the dispatcher.

One of the DPS offices (Waco, maybe? or somewhere in the Dallas area)
has a full-duplex repeater operating on that frequency. Supposedly,
they all have repeat capability for emergency use but elect not to use
it.

# 9057. IPN report of man with Dynamite strapped to his chest.

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-24 22:38:24 UTC
From: D. Brian Daniels
Topic: 9057  Message: 9057

IPN reported a man with dynamite strapped to his chest at a shopping area in Pasadena. But I never heard any more. Anyone know what was going on?

Thanks.

Had me curious as well. Normally doesn't create that much concern for me with these quacks but now that I have a daughter and I work on the other side of town, getting that page with no follow up and no specified location makes you start asking yourself some questions.

# 9061. band opening tonight?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-24 22:57:02 UTC
From: Myles Barkman
Topic: 9061  Message: 9061

Watch for a possible good band opening tonight along the Texas Coast line
and into the Gulf.
Maybe you can hear the Navy on various random freqs in the VHF band.
They will be scrambled with periodic "clicks" in the transmissions.
See how many NOAA Wx Radio stations you can hear on 162.400-162.550 or how
many airport ATIS stations you hear in the 118-136 MHz band.

# 9062. Re: Comms on 128.850 MhZ at Texas City BP

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-25 03:27:58 UTC
From: scanfan02
Topic: 9047  Message: 9062

Lifeflight uses 128.85 when they are on MA 1 or 2 on STAR-Net. Or on ITAC 1-5. Usually you will hear a Lifeflight pilot say they won't be on 800, or we will be on 128.85. 128.85 isn't simulcast on STAR-Net (as someone already said) only the dispatcher is.

--- In HoustonScan@yahoogroups.com, "Eric C. Carlson" <ecarlson@g...> wrote:

It was that day, which piqued my curiosity. It is the only time I
heard that configuration. And, to establish a time line, it was on
TG 308.

On another topic, is anyone familiar with this statement I heard the dispatcher on Ch 1 tonight tell a unit (2300 series):

"We are operating on East A."

Is it a new DPS Channel/configuration for digital, or is it referring to HCSD East A?

# 9066. 467.6375 MHz signal

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-25 06:23:06 UTC
From: Myles Barkman
Topic: 9066  Message: 9066

Got a task for anyone in the Pasadena area to figure out.
I always pick up a dead carrier on FRS Channel 11, 467.6375 MHz when I'm driving in the Pasadena area, notably in the northern part.
I've heard similar signals used in stores before like Gallery Furniture that broadcast some music and commercials, I guess for some sort of in-store thing.
Wonder if anyone is up for the challenge of tracking it down, at least to an intersection.
Toys-R-Us and Kroger have in-store phone systems that use UHF in the 457 MHz band. They have a constant carrier as well. Just a glorified cordless phone that works throughout the store.

# 9070. Another LTR

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-25 22:33:15 UTC
From: Eric C. Carlson
Topic: 9070  Message: 9070

I found another LTR system at the Academy Sports and Outdoors Distribution Center near Katy. I heard no activity while I was in the area but I did hear the idle data bursts on all four frequencies. They also have another license for a four-channel trunked system but I heard nothing on those frequencies (WPRX682).

Remember the software could be close to the same, but in the 296, he is going to have banks, while on ARC 246 or whatever, your not going to have banks. So in a way, it isn't going to be the same.

# 9080. TrunkStar *.swg File for Houston

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-28 23:28:22 UTC
From: Bill
Topic: 9080  Message: 9080

I'll be visiting Houston in the very near future and wondered if anyone could share their TrunkStar *.swg list they have compiled for Houston and the surrounding area. I am using a Uniden BC 250D handheld scanner. (I do have other programs for the radio and if no one has an *.swg file, I would appreciate any other type file.)

Thanks,

Bill

# 9081. Re: [HoustonScan] 467.6375 MHz signal

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-29 10:59:50 UTC
From: Myles Barkman
Topic: 9066  Message: 9081

Update:
On a hunch, I drove by Pasadena Square Mall on the way home yesterday and
the signal is definitely coming either from the mall or within sight of it.
Heard Christian music on it last week coming home that did not jive with any
of the radio stations so it may have been a CD or satellite source.

Checking coordinates the location is actually Bellair Junction,
Richmond and the RR tracks. I haven't been in this area in a long time
and vagely remember warehouse buildings on the south side of the
street. Does this have anything to do with the placement of video
camera's at RR intersections?

Ed,
I can tell you that the location you mentioned has:
NE: Office Building.
SE: A&E Reproductions
SW: Carpet warehouse
NW: Rajin Cajun restaurant and others.
Dwayne

# 9086. busy day

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-03-31 22:10:34 UTC
From: Myles Barkman
Topic: 9086  Message: 9086

Been quite a busy news day with Schiavo dying this morning, the Pope having last rites given to, and now there's a guy holding a pistol to his head walking along the UP train tracks between I-10 and Memorial.
Ops were originally on Central patrol 460.100, then Channel 8 460.225 and now on 460.350 MHz.

I'm not inferring that his situation has anything to do with the above mentioned events. I don't think anyone has had contact with him, just keeping a perimeter and making sure traffic gets stopped anywhere he gets close to a street.

Date: 2005-04-01 00:19:06 UTC
From: bpckty1
Topic: 9089  Message: 9089

I've been monitoring Starnet talkgroup 23088 for the past few weeks. I have yet to identify the user, just Base and unit numbers. It appears to be related to a school, possibly a college or university. The comms revolve around security as well as maintenance related items. The comms are heard on both the Downtown and Clodine sites. Any ideas?

# 9090. Re: [HoustonScan] Starnet 23088

From: Myles Barkman
Topic: 9089  Message: 9090

Deja Voux. Been hearing the same stuff here.
Hadn't really tried seeing what other sites I hear it on.
These are some of the terms I've heard used:

"College Center rm 155F to open door"
"center for the arts"
"tech building"
"library"

Units heard were 300s.
Have done Google Searches trying to narrow things down with no luck.
Thought perhaps Alvin Community College, Pearland College Center or U of H
but confidence is low, especially if using Clodine site. Sadly, sites used
sometimes give little or no clue.

That could be anything ...

U of H - Central, Downtown, Clear Lake or ???
Med Center - UT, Baylor, or ???
HBU
TSU
UST
Rice U.
plus a half-dozen community colleges.

I think LeTourneau University has a campus hidden in an office building
near the Galleria / Memorial Park area.

Did I leave out any other "higher" institutions of learning?

(Could be fun solving this one!)

This thing is still dragging on. Fox is still overhead, SWAT is on scene, command posts in place.
Ops are on Citywide 460.425 and Detectives 460.450. SWAT is also using their 465.225 MHz channel. Don't get to hear this used too much but Fox was on it a bit ago.
Still haven't heard what the guy's problem is.

Also 500 units. I was thinking that it might be the UH/Wharton College Building in Sugar Land, but when they discussed the dorms, my confidence in this choice slipped a lot, since it is a commuter school, from what I've seen.

The quest continues...

I agree, and that's why I've ruled Prairie View out, but it is a place to start the elimination process. UST, PV Nursing School, and TWU are possibles, since they are small campi, and both have dorms. But, methinks UST has names for the dorms, and if the nursing schools do, it would be only one, and the dispatcher wouldn't need to say the name of the dorm that needed maintenance or security services.

Actually, you can see all of "my groups" on a single page. At the
bottom of the short list, there's a link to view all of them. That
takes you to a list of all of them.

# 9104. AWOL HPD Radio?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-01 23:20:52 UTC
From: Myles Barkman
Topic: 9104  Message: 9104

Sounds like someone playing with a radio on West Patrol 460.150 MHz.
Don't know if it's one of HPD's radios.
Anyone for a Fox hunt?

From: bpckty1
Topic: 9089  Message: 9105

Thanks to an incident this afternoon that needed the PD/Security(300 series), the school is somewhere in HCCO-4's area, which can included part of HCCO-5's area (Cy-Fair ISD campuses). HCCO-4 referred a call to the school for investigation of a problem at the library (which had a happy conclusion, BTW). But, still no other "landmarks" in the comms.

The quest continues.

I believe that you are actually hearing NHMCCD, Cy-Fair College as that talkgroup. Cy-Fair EMS was running a call at Cy-Fair College in the library. Pct 5 was supposed to be responding with NHMCCD PD but Pct 5 elected to defer the call to HCSO.

He's right. Went to their website for the Cy Fair College and did a search for College Center and they have a building by that name.

That is the link to the page which I was referring. The new "My Groups" page lists up to the first 20. If you have more than 20, you have to flip pages. I don't recall what the limit was on the older system but it was larger than this.

# 9110. STARNET 21648

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-02 05:01:03 UTC
From: Eric C. Carlson
Topic: 9110  Message: 9110

Here is another talkgroup to work on: 21648. It seems to be fire/EMS-related. I heard it briefly today for the first time on the downtown site. It sounded like it was patch to another channel. I heard "open the road back up" and "show us back in quarters." FWIW, it's right next to the Liberty Police talkgroup, 21616.

I posted a while back that Liberty FD had apparently gone trunked. You can't hear the mobiles on the VHF frequency (155.025) anymore, and the dispatcher console makes a trunking "go-ahead" chirp when it keys up. Problem is, I can't get the Ames site on account of it sharing a control channel freq with Clodine. I'll give it a listen on Downtown & Baytown and see what comes up.

Date: 2005-04-04 19:52:24 UTC
From: sandyj
Topic: 9116  Message: 9116

I registered all of mine
sandyj

it is easier to do it off the .Gov site then it is to do it on the phone system. houston

which is: donotcall.gov

Sent: Sunday, April 03, 2005 5:31 PM
To: John Willis
Subject: cell phone numbers are being released to telemarketing companies

In a few weeks, cell phone numbers are being

released to telemarketing companies and you will

start to receive sale calls. You will be charged for

these calls.

Call this number from your cell phone 888-382-1222.

It is the national DO NOT CALL list. It only takes

a minute of your time. It blocks your number for 5

years. Please pass this on to everyone you know who

doesn't want to be hassled.

Life is not measured by the number of breaths we take,
but by the moments that take our breath away.

# 9122. suggestion to HPD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-07 00:21:21 UTC
From: Myles Barkman
Topic: 9122  Message: 9122

Seems like HPD is trying to put too many folks on A7 460.350 MHz.
I think they should split off some of the operations onto underutilized B3
460.525 MHz.
That will make better use of the channels and relieve some of the congestion
on Special Ops.

Now how do I get them to listen to me???

# 9127. League City PD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-04 02:57:20 UTC
From: Jason Knutson
Topic: 6624  Message: 9127

Hi,

Just found this group earlier today and searched through the messages
but didn't find an answer to my question.

I live in League City and had been listening to the PD, FD, EMS, etc
up until probably a couple months ago. Now I rarely pick up anything
on the trunk system I have programmed into my scanner. At times I
will pick up transmissions but it's pretty rare these days. More
common is hours upon hours of silence.

Does anyone know if they changed they system here?

Thanks,

Jason

Thomas,

Where (roughly speaking) is this repeater located... what side of town? Thanks!

The 147.24 (KB5AXX) amateur (ham) radio repeater is back up. It has an
open auto-patch. At about 600 feet and 45 watts, it covers Houston
pretty well.

The subaudible tone is 167.9. Input frequency is 147.84. Dial '*' plus
your ten-digit telephone number. At the conclusion of the call,
announce the third-party traffic and hit '#' to bring it down.

From: Capt. Glenn Jones
Topic: 6624  Message: 9130

No, they are still operating on there own system. There have been radio tests, but nothing that would cause you to go hours upon hours of silence. Either your missing some freqs in your programming or your antenna is jacked, or worse case scenario your scanner is busted. This is current as of 8:40 this morning was monitoring them as I took my kid to school.

Subject: [HoustonScan] League City PD

Hi,

Just found this group earlier today and searched through the messages but didn't find an answer to my question.

I live in League City and had been listening to the PD, FD, EMS, etc up until probably a couple months ago. Now I rarely pick up anything on the trunk system I have programmed into my scanner. At times I will pick up transmissions but it's pretty rare these days. More common is hours upon hours of silence.

Does anyone know if they changed they system here?

Thanks,

Jason

Haven't heard anything about Nassau Bay, til now, but I did hear yesterday, from a source connected with the La Porte City Council, that the City of La Porte is planning to switch to STARNet, either at the end of this year, or the beginning of 2006. My understanding is that they are working on the funding issue, for the purchase of the equipment. I'll be glad to see it, when it happens. La Porte has been one of the last hold-outs on VHF, for awhile now.

my 2 cents! :-)

# 9134. Re: [HoustonScan] cell phone registration to block telemarketers

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-07 16:48:30 UTC
From: Eric
Topic: 9116  Message: 9134

Evidentally they're allowed to call them, though, if they find them elsewhere. We're using my cell as the listed number for our business start-up (as opposed to home number), and we've listed it on only two documents (both for the State), yet at least one is availible via Public Record. I've gotten several telemarketing calls since. damnit.

It's actually already in the works. The new "Mobility Division" is going
to stay on 7, which will be dispatched from Transtar by a police officer. As
far as I know right now that will be accident and solos, maybe Truck
Enforcement too. The other yahoos on that channel, notably the downtown zip squad, will
be moved to B3 which will be dispatched from HEC by a dispatcher. Don't know
the timeline, they aer having to do some upgrades to the terminals at
Transtar, but that's the plan for now.

Yes, Myles, that's exactly where it is. Channel 13 has an 800ft. tower
that houses their analog signal, as well as the backup tower for KUHF,
and the 146.94 amateur repeater. There is very little left on that
tower, as it is aging and needs refurbishment. I am told, however, in
the course of their refurbishing the tower, that the antennas will
stay up and service should not be interrupted.

I'm glad to see that there are still a few good locations where money and politics keep amateur radio repeaters off towers.
I wish the .84 repeater was on one of those 800+ foot antennas around here or that we could implement a votor-receiver type system for wide-coverage without the need to have multiple repeaters linked.

Actually that is the 980ft backup tower for Channel 13, not 800ft....their current analog and digital 32 are both on the 2000ft tower (right next door to the 26 tower) west of the backup site (which was their main site until the 2000ft towers were built in the 80s).

Only thing with autopatches; because of cellphones, autopatches are passe now.....heck almost noone uses ECHOs autopatches anymore (of course their range is not what it used to be)...

Chris
WB5ITT
(an old 147.24 patch user from the 70s when it was a full duplex patch *up/#down...one of the best sounding back then!)

Subject: [HoustonScan] Re: 147.24 Open Auto-Patch Repeater

Actually that is the 980ft backup tower for Channel 13, not 800ft....their current analog and digital 32 are both on the 2000ft tower (right next door to the 26 tower) west of the backup site (which was their main site until the 2000ft towers were built in the 80s).

Only thing with autopatches; because of cellphones, autopatches are passe now.....heck almost noone uses ECHOs autopatches anymore (of course their range is not what it used to be)...

Chris
WB5ITT
(an old 147.24 patch user from the 70s when it was a full duplex patch *up/#down...one of the best sounding back then!)

-------Original Message------------

Yes, Myles, that's exactly where it is. Channel 13 has an 800ft. tower that houses their analog signal, as well as the backup tower for KUHF, and the 146.94 amateur repeater. There is very little left on that tower, as it is aging and needs refurbishment. I am told, however, in the course of their refurbishing the tower, that the antennas will stay up and service should not be interrupted.

Well, I never dropped a tape-measure down from the top, but if you say it's 980ft, who am I to argue? I was eyeballing it... not bad - only off by a mere 180ft.

Auto-patches are passe' for people who can afford cell phones. Believe it or not, not everyone has one. Many folks have expressed appreciation for the patch being back up on the air. Even at half-duplex, its performance is outstanding.

I meant to say that it housed Ch. 13's *backup* analog signal. Sorry for the mistake.

Thanks,

Looks like it's my scanner...it's not actually scanning. It goes into scan mode but looks like it stays on one channel. When I enabled the other banks, I noticed it never goes to them. Always stays on the same one. I did a reset on it and reprogrammed it but still have the same issue. Guess it may be time for a new one.

Jason

# 9148. Re: [HoustonScan] Nassau Bay

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-09 15:31:14 UTC
From: Myles Barkman
Topic: 9131  Message: 9148

I believe they are adding more frequencies to the existing League City system for future STAR-Net implementation. Haven't heard about construction of a new tower.
Their 264-foot tower should adequately fill in the gap left between the Alvin, Pearland, and Baytown sites for use by League City, Seabrook, Nassau Bay, and Pasadena.

Have been listening to the Alvin site, which is probably what Webster uses primarily, and noticed last night that the frequencies used at that site have changed.
Some of the frequencies I've seen used are 856.2125, 859.7125, 860.7125, 867.6625, 867.750, 868.0875.
Folks using control-channel-only tracking won't miss a beat but for folks who have to program in all the frequencies, you have to be missing a lot unless you figure out what they are using now.

I haven't noticed any new talkgroups being used that might indicate Nassau Bay presence so I wonder if they are just using Webster PD's primary dispatch talkgroup 14448 for now. I haven't listened long enough to find out.

Just an FYI.
No, they are not leaving the area, just basically across the street.
This will be the first of it's kind where a National Weather Service office
will be co-located with an Emergency Management Office.
Should make for more efficient relaying of emergency information, definitely
for Galveston County and perhaps for the rest of their warning area.

To finish my thought on this subject, perhaps we need to map out all the freqs on all the sites again. Not that it seems to matter much since it is always subject to change. If you don't have a scanner that can do control-channel-only tracking, get one!

# 9151. Re: 147.24 Open Auto-Patch Repeater

From: CBoone
Topic: 9088  Message: 9151

Not bad indeed :) I remembered the tower as being 1000ft or close to it...according to the FCC Antenna Sturcture Registration, it is 298.1 meters AGL (Above Ground Level) or about 980 ft...the tower is one of the oldest out there (built in 1954 or before). When the old 147.24 open patch (it was on the East side of town IIRC) was on back in the 70s, it was rarely used...and its repeat audio was low and weak..I think it was done because of the full duplex patch and audio levels...

One friend of mine I called on the patch (WB5OHH who was trustee of ECHO 147.09 and owner of 147.06 at the time), he commented he could not tell I was on a radio patch!...later the patch went closed (as the system that was on 146.70 moved there...and wasted a rptr pair as an autopatch only system...luckily it went away..there were many questions over it being legal anyway)

I have been an open autopatch operator myself (in the Beaumont and Conroe areas) over the past 20 years...in fact I ran the only open patch in the BPT area that covered the entire area....(Beaumont, Port Arthur and Orange are all Long Distance from each other!) thanks to the company I worked for at the time and its ROLM CBX telephone system :)

BTW I don't know if you are aware but since you are running an ACC controller on it (an 850 right?), please accept my invitation to join the ACC list here on Yahoogroups.com....(ACC-subscribe@yahoogroups.com will get you signed up).....largest and most open ACC list in existance...and I welcome any ACC user or owner to join up :) (I own a RC850 since 1984, 2nd or 3rd in Texas! And a RC96 now along with an ITC32 and other ACC gear over the years) My 850 has been serving as an open patch in Beaumont on 444.5 the last 10 years or so...but a lightning strike a while back may have done more damage than I can easily repair...(but I do have two RLC3s and one is going in its place)

Chris
WB5ITT
444.5/224.5 Beaumont, 444.8/224.8 Conroe (off air temp but UHF will be back soon!), 444.8 Vinton, LA (linked to Beaumont and HF-6mtr all mode remote base)
All 100Hz PL....and linking down I10 eastward toward Baton Rouge

Hearing CLEMC go to the Boardwalk is not uncommon, but hearing two units sent for two separate patients for similar problems is unusual.
Heard one unit dispatched for a guy with possible allergic reaction at the Waterfront.
Then 1 minute later, another call for a woman with possible food poisoning.
Hmmm, let me try to remember. Are you supposed to eat them oysters in months that end in "R" or not?

Walker County is operating dually on VHF and STARNET. TG 23600 is the dispatch secondary, and all deputies have both radios in their patrol cars. They have been using TG 1456 (TEST 1) as a back channel.
All the ops have been on site 20. A deputy I spoke to said they are giving it a test run.

# 9165. new UHF P25 trunk

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-11 20:47:54 UTC
From: Myles Barkman
Topic: 9165  Message: 9165

Looks like JSC or someone down here has started up a new 10-channel UHF
Motorola P25 trunk system. It was pretty strong near Ellington area though.
Freqs heard so far are:
406.2375 control
406.8375
407.0375
407.2375
407.4375
407.6375
408.550
409.5125 (was conventional JSC Security P25 encrypted)
409.7125
409.9125

I haven't figured out the particulars to track it yet (base, offset,
spacing).
It's a moot point though since everything on it so far has been encrypted.
:(

From: Myles Barkman
Topic: 9165  Message: 9166

Running T4Win (version 0.94 beta), it tells me this is system B32C site 1
and so far has logged talkgroups:
32
96
288
544
624
912
10624 could be bad data

Think it has seen about 39 users. That would be alot for just JSC security.
Connect tone 105.88 Hz.

Could be.

T4Win support for VHF/UHF motorola was never completed. Try that *ahem*
other program I sent you.

Just figured it out from the data.
Base is 406.100
Offset 380
Spacing 12.5 kHz

Tracking just fine now. See talkgroup 288 doing most of the talking.

From: bpckty1
Topic: 9165  Message: 9170

Myles,

I can get the control channel in downtown Houston, but I cannot track
the system with my Pro-96. I can track the frequencies in
conventional mode, however.

I did a search of the 406-420 range to verify that the scanner was
receiving properly and got a hit on another fed system, possibly from
Beaumont, 408.0750 control, ID: 550A, with the following freqencies
affiliated with it: 409.6500, 413.3500, 413.8250. The
system "disappeared" after 9AM, however. Any ideas?

I was able to track the JSC(?) system to my work at Tidwell/290 a couple of mornings ago but typically, I got coverage from the loop southward.

Radioreference.com shows the Beaumont Federal Prison Complex using 406.475, 408.075, 408.300, 409.100, 409.425, and 410.150. Does not give the system ID.

409.650 is used locally by the Houston Federal Detention Center.
413.825 is used by a Veterans Affairs trunk in Dallas.

Don't find any trunks listed with 413.350 in the region.
That does not mean there is not a system using the freqs you listed. Just not one on the site I searched. It also does not have any info for that system 550A.
Possibly, this is the system in Beaumont and they are using different frequencies than previously recorded.

By the way The sign at Polly Ryon has been changed to OakBend Medical Center. Does any one know when this happened?

Myles Barkman <kg5ai@...> wrote:
Their national map still shows Polly Ryon.
Had there been any other Air Medical service in the Victoria area before?
I suppose they may still transport up here to Hermann or to Corpus or San Antonio.

Interestingly, the Pro-96 still won't follow the system, but the BC-250D works well, except for not having the decryption key.

Any ideas for tweaking the Pro-96?

Confirmed it today. 21648 multicasts with 155.025. Heard it on downtown at first, but mostly Baytown after that. It sounds like most of the mobiles are still on VHF for the time being, as there is a noticeable lag and reduction in audio quality between VHF and 800.

# 9178. 163.5625

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-14 22:22:51 UTC
From: Myles Barkman
Topic: 9178  Message: 9178

Heard rarely used 163.5625 on the way home from work.
I had heard this in analog mode before with 151.4 Hz PL tone.
Now I hear P25. Sounds like Ellington Air National Guard types.
Callsign heard was "Tango". Think they could be running an exercise but
signals are weak and I can only pick up the base station.

You are able to track the FDC system downtown though, right?
Don't know why you wouldn't be able to track the JSC system.
Just need to make sure you have the base as 406.100 MHz instead of 408.000 MHz.

Really though, it's not very exciting and listening to the encrypted digital for awhile tends to wear on you.
Unless you're into that kind of thing...

Think the callsign now sounds like "Banger" or "Bangor".
Heard talk of number of rounds fired, and contamination around a vehicle.
Some sort of training. Just heard the guy at base say he wanted a drink of
water that they have been running without a break all day.
Anyone happen to know if some special group has been out there today?

The Quest is the Quest.

Besides, you never know when a radio will drop code, or someone accidentally turns the code switch off and you can identify the frequency/talkgroup.

I have placed the Pro-96 in Normal Mode and have the 406.100 base
entered. Wierd. The Uniden works, the GRE doesn't.

Did you remember to put the PRO-96 in "Table" mode for trunking? I
usually forget that one when trying these VHF or UHF systems... :-)

Yep.

I've also tried multi-table, splinter, and normal.

(As I'm writing this, I see Ben has already chimed in).

A little late, but here's some findings this morning for freqs used for the
MS150 from Houston to Austin.
146.920/443.825/444.075 Medical Net (Saltgrass Link repeater system)
145.190 Main Net
147.000 Might be used?
These are really the only freqs used in the Houston area.
Other repeaters are used along the path in Bellville, Columbus, La Grange,
and Austin.
HF is available as a backup.
In past years, the ambulances had APRS so you could track their positions
online.
I don't have specific info on that this year.

http://www.findu.com/cgi-bin/find.cgi?ms*

then click on one of the stations in the table.

MSVEH-9 seems to be the lead?

MSVxx-X are ambulances.

You can look on the left side of the findu page and build a URL that will show multiple stations, or display one, and then click "nearby", etc.

146.320 is the input to the 146.920 repeater.
Sounds like they have an accident with a rider with a head wound and
Lifeflight is enroute.
2.4 miles west of breakpoint 2. This is on FM529 east of FM362 just inside
Waller County.

Looks like I captured that freq since I live close to the ride route.

Katy EMS was on scene and they called for Care Flight, since the
MS 150 folk contracted with them. Pattison EMS was concerned since
they contacted Life Flight Control and they knew nothing about it.
But, Katy EMS got the phone number for air ambulance and both
Pattison and Katy EMS folk are glad for the number.

Just listening to the Med Net, a bunch of folks are apparently
either out of shape or seem to enjoy riding extremely (too) fast
down the hills along the route.

# 9196. Pro-96 Purchase

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-17 15:07:17 UTC
From: Jr Bob Dobbs
Topic: 9196  Message: 9196

I'm thinking about investing into a portable hand held trunking scanner. I would like to purchase the Pro-96, but not too sure if it's worth the investement here in Houston. All I may need is the Pro-95. Does anyone know if there are good digital trunking talk groups in the Houston area and also any idea when STARNET might go digital?

Thanks
JR Bob D.

From what I've heard, and seen, Starnet will eventually go digital,
but for now they are putting up new towers to make seamless comms.

Keep an eye on the handheld units that your local law enforcement and
the other agencies are using. New users have to purchase digital
capable radios. Current users are allowed to keep their current
radios, but are expected to purchase the digital radios. I have no
idea what the schedule is for the grace period. But, when you see
your favorite law enforcement agency switch from the STX to the MTS
series handheld radios, ...

Some DPS channels are digital along with a few talkgroups on the
Starnet system. DPS seems to be moving from the west to east with
their digital system.

Bush is scheduled to be in Galveston Tuesday, April 26.

http://galvestondailynews.com/story.lasso?ewcd=0f42300cb4fe7902

I'm guessing they'll land Air Force 1 at Ellington and helo down to
Galveston.

If so, that might make for interesting radio and visual stuff for us
North Galveston Countyites.

From: Dominick Adamo
Topic: 9205  Message: 9205

Former Houston police chief Jack Heard dies
09:39 AM CDT on Monday, April 18, 2005
Associated Press

HOUSTON -- Jack Heard, a former Harris County sheriff and Houston police chief, has died. He was 87.

Heard, who died Sunday at Southwest Memorial Hospital, was the only person in the 20th century to have been Houston police chief and sheriff of Harris County.

KHOU-TV

Former Houston police chief and Harris County Sheriff Jack Heard has died at the age of 87.

He followed in his father's footsteps when he become police chief. Heard and his father, Percy, both become chief at the age of 36.

Jack Heard, who was police chief in the 1950s, established the state's first police narcotics division and Houston's first police substations. He also abolished a regulation that required uniformed officers to wear wool shirts in summer.

"Not only was he the first 'cool' chief, (Heard got rid of) the shoulder strap on the Sam Browne belt that was a traditional part of police uniforms of the era," said author Tom Kennedy, who has studied Heard's career.

Whatever.

Dyslexick fingerz.

But, the point remains, when the STX disappears and the series 5000 of whichever series, X or M, _TS arrives, digital is near.

Police cars collide in overnight chase
07:57 AM CDT on Monday, April 18, 2005
From 11 News Staff Reports

Two police cars involved in a chase collided Sunday night near the intersection of Cavalcade and Gano in northeast Houston.

They were treated at the scene for minor injuries received when their airbags activated.

KHOU-TV

Two police cars collided as they were chasing a suspect Sunday night.

The suspect they were chasing was eventually caught at Chapman at Hamblen. He had been driving a stolen car and had several felony warrants out for his arrest.

# 9208. Chemical warehouse destroyed by 3-alarm fire, shelter in place lifted

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-18 16:35:41 UTC
From: Dominick Adamo
Topic: 9208  Message: 9208

Chemical warehouse destroyed by 3-alarm fire, shelter in place lifted
07:35 AM CDT on Monday, April 18, 2005
By Carolyn Campbell and Jeremy Desel / 11 News

Click to watch Carolyn Campbell's video
Click to watch Jeremy Desel's video

The shelter in place warning issued for the area within 1-mile of 7707 Wallisville Road Sunday night was lifted about around 5 o'clock Monday morning.

KHOU-TV

Flames could be seen for a mile away as they lit up the night sky in northeast Houston.

The structure involved in the overnight blaze was the Superior Packaging and Distribution plant which contains a variety of chemicals, according HFD officials.

Firefighters were still on the scene in northeast Houston, trying to determine what cause the blaze.

Officials from environmental agencies are at the location to help determine which chemicals were inside the building that was on fire, and if there would be any affect from the water runoff from fighting the fire.

Flames lit up the sky and could be seen at least a mile away.

A security guard at the scene said there was no explosion, but the flames seemed to appear out of nowhere, quickly engulfing the entire building.

A shelter in place had been issued for the immediate area within 1-mile of 7707 Wallisville Road in east Houston after a three-alarm plant fire erupted around 9 p.m. Sunday.

The structure at the center of the blaze was the Superior Packaging and Distribution plant which contains a variety of chemicals, according HFD officials.

Around 10:30 p.m. authorities announced that a reverse 911 call was made notifying residents in the nearby area of the existing shelter in place and that they had the option to evacuate. The shelter in place included the following streets: Salina, Exchange, Iris, Terminal, Hewrick, Grand and Arlicious.

HFD officials said firefighters were immediately instructed to fight the blaze from a defensive position. The building is expected to be a total loss. No employees are believed to have been in the structure at the time of the blaze.

There was also a problem getting water to the fire. Firefighters had to connect hoses to a hydrant and a pumper, then run them the length of nearly two football fields to the very back of the office building complex where the fire was raging.

Wallisville Road in the immediate area has been closed which could affect HISD, because the district's central warehouse is next door. The facility houses one of the district's motor pools as well as text books. HISD spokesman Terry Abbott said Sunday night schools should not be affected.

# 9210. Houston STAR-Net down

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-18 21:23:04 UTC
From: Myles Barkman
Topic: 9210  Message: 9210

This should make the news as much attention that they give Houston's dispatch center.
The downtown Houston site of the STAR-Net system has been down for some time today. If they know how to use their radios, they can select any of the surrounding sites that has a good enough signal but you know not everybody got the training or remembers it.
This can be a real safety-of-life issue for police/fire/ems.
The system is so broken that it isn't even going into failsoft mode.
No signals on any of the repeaters, voice or control channels.

OK, now that I'm typing this, it has come back on.
I don't know how long it was down. Heard about it around 3:30pm and it must have come back on just a few minutes ago (about 4:15pm).

Heard it had something to do with a T1 line being down.

Can anyone that uses the system comment on how it affected them and how, if anything, they were able to work around it?
What about any instances of dispatching being down?

I was scanning it from about 2:30 to about 3:00, so it couldn't have
been down for long. None of the officers I heard (SO Dist. 1, Pct. 4)
mentioned problems with the radios, either.

The PDs around here should be using Smartnet portables and mobiles/bases. So the radio would switch towers by itself (no user input).

I guess that depends on what you call a "type".
I still consider them closely related. They are both Motorola type systems
that when monitored on a scanner, you cannot tell the difference.
SmartZone is just newer and has some advantages over SmartNet.
I don't think SmartNet radios could change sites automagically due to signal
strength.

# 9215. Smartnet vs. Smartzone, and AMSS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-19 12:26:02 UTC
From: Mark Goad
Topic: 9215  Message: 9215

Both smartnet and smartzone are the same type of trunking.... i.e., Motorola Type-II trunking. A smartzone radio simply has the ability to compare signal strengths from other sites, within the same system, and automatically switch to another sites, once the predesignated minimum RSSI threshold in the radio, for the site it is currently affiliated with, is no longer met. Smartnet radios are not designed to take advantage of a smartzone system's multiple sites, and automated switching between those sites. The smartnet radio is still Type-II trunking, meaning that it will operate as it should, on the system's site, of which the control channels have been preprogrammed (fixed) for that particular site. Because the smartnet radio typically will allow (typically) no more than up to eight (8) control frequencies, the smartnet radio is usually set up to operate on a fixed site, e.g., the downtown Houston site. Conversely, in a smartzone radio, there may be up to 32 control channel frequencies, from which the smartzone radio will automatically choose the "best site", by selecting the strongest RSSI signal, and subsequently locking onto (and affiliating with) that particular site.

Motorola's cheesy predecessor to Smartzone, was AMSS (Automated Multiple Site Selection), which allowed the end-user to manually, force a search of a limited number of preprogrammed control channel frequencies, in the radio's control channel list (typically only about 8 control freq's, as apposed to a smartzone radio which is typically capable of 32). There were a number of "issues" with AMSS. It wasn't very reliable, in keeping the user "in range" should he/she roam. Despite its name, AMSS did not "automatically" switch between sites either. Only when a radio was so far out of range, that it could no longer detect the control channel it was locked onto, would the AMSS smartnet radio "roll-over" to the next control channel, in the list. It took the user to press a button on the radio, to force a search for a another site. And even then, the "next" site it would lock onto, was not necessarily the strongest RSSI of the sites available in the radio's list of control channels for that system. It would just look for another site, that matched the system I.D., and stay put. To find the BEST, or strongest site, the user had to force the search several times, to "hear" which site sounded the best, and then decide to stay on that particular site.

AMSS was not designed to make use of RSSI, to determine the strongest signal for optimal utilization, in the selection process of determining which site would be the best site, for the user. Another problem AMSS has, is that in most Motorola radios, when the user forces a site scan or search, the radio does not "deaffiliate" with the with the system controller, of the site it is presently locked onto, and then "affiliate" with the new site, once it has "changed" sites, selected by the user. Not sure why this was allowed to happen, but if the user switched sites, and the new site did not already have another user affiliated through that particular site, then the user making use of his AMSS feature, may or may not (probably not) receive audio for the talkgroup his radio is presently set to. Smartzone corrected this, and forces a deaffiliation with the "old" site, and affiliation with the "new" site, upon site change, and is continually updating its RSSI values, and switching to another site, once the RSSI falls below it's predesignated threshold. Somewhat similar, in concept, to how a cellular phone operates, in a cellular telephone network. Smartnet is good, but smartzone is so much better!

Cheers.

My bad, I get Smartzone and Smartnet mixed up! I meant Smartzone. As I understand it, with Smartnet, you can only have a limited number of sites, while with Smartzone you can have up to 48. With Privacy Plus, there is only one site. Then you have Smartzone Omnilink, which can link up to 4 Smartzone systems together, making up to 192 sites!!

# 9224. new COH trunk?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-23 00:18:20 UTC
From: Myles Barkman
Topic: 9224  Message: 9224

Just noticed a trunk system with an old call that was recently licensed to city of Houston.
KNDH570
856.2875
856.3125
857.2875
857.3125
858.2875
858.3125
859.2875
859.3125
860.2875
860.3125

Located on Fairbanks North Houston between Breen and West Little York.
Think these are old Southwestern Bell trunk freqs which I thought were going to be used by STAR-Net.
The control point info and other contact info point to the Houston Airport System.
Perhaps they aren't going to stay on STAR-Net for long unless this will be some backup system.
Don't hear any control channels on air yet and don't know what type system it will be. I kind of liked them being on STAR-Net myself.
Ben, what was that you say about the quest?...

Update: When I search KNDH570 in the FCC database, I only get 4
frequencies, they are: 856.2875, 856.3125, 857.2875 and 857.3125.
Where did you get the other 6 frequencies from?

Look with this:
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

or this:
http://wireless2.fcc.gov/UlsApp/UlsSearch/searchLicense.jsp

or this:
http://svartifoss2.fcc.gov/reports/index.cfm
On this one, you have to hit "Next" at top to see other pages.

As far as the system you are hearing with the control channel currently on
857.2875 MHz, I hear it too.
It is system 7C26.
Band is open and that is coming from the Dow Chemical Plant in Freeport.
Call WNCD873/KNJA452
http://www.radioreference.com/modules.php?name=TRSDB&action=sysid&sysid=7c26

# 9233. RE: [HoustonScan] Re: new COH trunk?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-23 05:12:39 UTC
From: Michael W. Jones
Topic: 9224  Message: 9233

For specifics:

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=1927457

License search identifies control point as being Houston Airport System (based on address and phone number), and that it is a renewal. Richard Vacar (Name on the License) is the Director of the Airport System.

I thought the old system's hardware was gone, and the frequencies were to be transferred to StarNet?

Best guess is that they are just holding the frequencies, and will either transfer the license at a later date, or establish their own StarNet sites with them (I know from being at ramp level and the tunnels under IAH that there is reception problems on the StarNet system right now - but they may do like they did at the courthouse, and put their own repeater-net in the airport buildings.) Continental Airlines has a repeater at the airport that provides good coverage even in the baggage tunnels under terminal C for their EDACS system.

# 9235. International Festival

Date: 2005-04-23 11:44:53 UTC
From: Myles Barkman
Topic: 2259  Message: 9235

Looking for comms related to the International Festival going on this weekend and next weekend downtown.
Historically, they have used the KBR 900 MHz system loaner radios but since that is gone, the obvious backup was the Houston 2-way Fleet Talk UHF LTR system loaners. I haven't heard a peep on those loaner groups in days.
I'll probably figure it out this morning but wondered if anyone else may have already come across what they are using out there.

We have already decided this and I corrected my mistake. I get
Smartzone and Smartnet mixed up.

# 9238. Galveston air show 118.1

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-23 15:15:55 UTC
From: Cliff
Topic: 9238  Message: 9238

It sounds like the Scholes tower freq is 118.1 during the Galveston air show.

At 10:13 CDT April 23, I'm hearing Scholes tower handling non-air show aircraft.

# 9239. Galveston air show ground 124.125

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-23 15:31:28 UTC
From: Cliff
Topic: 9239  Message: 9239

The tower is sending aircraft to ground on 124.125.

I'm hearing some activity there.

One pilot told the tower that the FSS said ground was 124.425, but
that was apparently erroneous.

I looked up HCSO Dispatch 6 on Radioreference and it indicated the TG was 19184. No wonder I could not hear them, the TG in use at the tournament appears to be 19120. May also be some operations on TG 9424.

# 9244. Re: [HoustonScan] International Festival 2005

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-04-24 04:20:27 UTC
From: Myles Barkman
Topic: 9244  Message: 9244

OK, here goes:
Ch.1 451.800 HPD/5-Star/EMS/First Aid
Ch.2 451.850 Operations/HQ
Ch.3 451.900 Dispatch-Maintenance
Ch.4 451.950 Food/Bev/Propane/Elec
Ch.5 461.4375 Markets
Ch.6 461.5375 Sponsorship
Ch.7 461.5875 Entertainment
Ch.8 462.550 Finance
Ch.9 462.700 Marketing/PR
Ch.10 464.500 Volunteers
Ch.11 464.550 Site Animation
Ch.12 467.750 HIF Staff
Ch.13 467.800 -not labeled-
Ch.14 467.850 -not labeled-
Ch.15 467.900 -not labeled-
Ch.16 467.925 -not labeled-

All simplex with 203.5 Hz PL tone.
Some folks were heard using those last few channels that aren't labeled but
it appeared to be BSing.
The 5-Star on Ch.1 refers to 5-Star security, a private security company.
HPD used citywide 460.425 MHz and HFD used TAC-5 460.575 MHz.

Tuesday, April 26
8:00 AM

KTRH is reporting that Air Force 1 will arrive at Ellington just
before noon, then Bush will take Marine 1 down to Galveston.

I may have heard something about flying to UTMB.

Here's where I'll be listening:

Houston approach south- 134.45, 284.0
Ellington tower- 126.05, 253.5
Ellington ground- 121.6, 275.8
Scholes unicom (maybe)- 123.05

KTRH makes it sound like the main story here is social security.
They obviously don't realize the significance of hearing Marine 1 on
the radio.

Hey Cliff,
Thanks for being dead on with the airshow info. Made the show more fun
to listen. By the way that was Ralph Royce's son doing the directing
this time.

I guess I heard right about Marine 1 flying to UTMB.

It looks like that's where one of the flight restrictions is centered.

On OEM Ch. 1 (Star-net TG 8336) they said they were going to do a drill in the 501D (I think D maybe J) keymap. They mentioned an LZ and they will be using VHF highband mutual aid (154.28). You may want to listen to Lifeflight primary and you might get some more info.

# 9252. Re: [HoustonScan] OEM drill today

Baytown Airport (HPY) is right in the middle of 501D. Makes it a likely
place to land.
The Goose Creek Country Club golf course is in 501J. Don't think they would
run a drill there but you never know.
CTAF for HPY is 122.800 MHz so might listen there too if in the area.
Also check TG 18736 which is OEM-2.

It was at the Hilton on Nasa Rd. 1, which makes it a Nassau Bay fire.
Also, did you catch the channel designations they were throwing out?
Dispatch called it "Tac-3" and the commander put it as "A-14" in their
radios.

Yeah, I made the change in my list that it is called TAC-3. I also made a note that it was A14 but I don't expect them to use that designation often. Probably Zone A, channel 14 in their radio talkgroup lineup. Baytown does refer to their channels like this instead of using a descriptive name like "Fire-1" or "Fire-2". Guess if they have hand-held radios that have a small display, it makes it more universal.

Some interesting radio uses at the Fed in Houston.
License application states this as the use of the frequencies:

RADIO TO BE USED TO DISPATCH RIDERLESS AUTOMATED GUIDED VEHICLES WITHIN THE FACILITY.

462.5125
462.2125
462.2375

6 2-watt units

Makes me wonder if the electric cart assist units like they use at Target are in this band or if they use the unlicensed 900 MHz band.

Hi Aaron,
E 110 is not a real unit, it's an mdt in the dispatch center used to view how incidents are received in the field. That was reported a few days ago.

A banner tow plane went down near Richmond and Hillcroft at Lee High School.
Officers are on scene and pilot is OK.
Ops on west patrol 460.150.
Just happened about 4pm.

HFD just dispatched alert 3 off airport grounds on TAC-7 462.975 MHz.
Talking about shutting off fuel on aircraft.
60 gallons of fuel reported by pilot. Guess he didn't run out of gas.

Sounds like the most dangerous thing going on with this banner tow incident
is the banner.
He released it so he could make his emergency landing and the banner landed
on a building and power lines on Richmond.
The wind has blown the banner off the building and into some more power
lines.
Centerpoint should be getting on scene to keep this from getting worse.

# 9273. 800 MHz refarming

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-01 16:16:19 UTC
From: Myles Barkman
Topic: 9273  Message: 9273

Just got wind of this great resource about the upcoming refarming of the 800 MHz business/public safety/Nextel bands.
http://www.800ta.org/index.htm
Just to bring everyone up to speed, Nextel currently operates on frequencies in between business and public safety users in parts of the 800 MHz band. This has led to lots of interference issues between all users.
This is most notable by scanner users who lose reception when they get with a mile or so of a Nextel tower.
Well, to deal with this issue, they are going to move all the public safety folks to the bottom of the spectrum, and all the Nextel folks to the top of the spectrum.
This will all be happening in waves across the US. The Houston area is in "Wave 2". The time frame for public safety moving is to start later next year and they have 18 months to complete.
According to the site, the STAR-Net sites will shift down 15 MHz which is common for trunk systems operating in the 866-869 MHz band (except for the 854-861 MHz freqs).
Other users of this band will move down 15 MHz, such as Galveston County, HISD and Montgomery County.
Users such as Centerpoint Energy, City of Houston and League City appear not to have to move. Some of their freqs in the 860 MHz band may have to go though.
All this should be complete by the end of first quarter 2008.

"So what the heck does all this have to do with me?" you ask.

Well, all your trunk tracking scanners won't be able to track the systems after they move.
This is because all the 800 MHz channels will have new channel designations given to them which is going to be different than what is programmed into all the trunk-tracking scanners AND even the two-way radios. I don't know if the two-ways can be flashed with updated channel info or if those will be paper weights.

This is a pretty big bummer in the pocket book for folks that have bought all these fancy trunk trackers thinking they were going to be using them for years to come.

Remember that when you see those adds for Nextel. Talk about moving your cheese...

From: Myles Barkman
Topic: 9273  Message: 9274

OK, this helps answer some of the two-way impact. Approved radios operating on the STAR-Net system probably will just need reprogramming with new RSS software and retuning.
Older radios will have to be replaced.
http://www.motorola.com/cgiss/800rebanding/docs/Rebanding_Impact_All_Categories.pdf

Here's another resource about the refarming:
http://800mhzrebanding.com/

Exactly how this will effect the STAR-Net system with the prospect of opening up the 700 MHz public safety band, who knows.

# 9275. RE: [HoustonScan] 800 MHz refarming

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-01 16:57:31 UTC
From: Michael W. Jones
Topic: 9273  Message: 9275

Also, Uniden has indicated that they will be releasing a flash upgrade to the newer scanners, pretty much anything 296/796 and newer.

That leaves my 250 in the dust (but I was already considering the soon to be released 396 anyway).

How so?

According to the chart on page 3 of the Quick Reference guide, none of
the new allocations will go below the current band edge of 851MHz for
the repeater side and 806MHz for the mobile side. So every
trunktracker and commercial radio currently on the market will still
be perfectly functional after simple reprogramming.

# 9277. Re: [HoustonScan] 800 MHz refarming

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-01 17:56:46 UTC
From: Myles Barkman
Topic: 9273  Message: 9277

It's all in the way trunk-trackers work.
They listen on the control channel for talkgroup and channel grant information and use that to figure out what frequency to move to depending on what talkgroup you want to listen to.
For example, you want to listen to the STAR-Net system (Houston site) on talkgroup 21904 (Lifeflight).
Right now, your scanner listens to one of the control channels for any channel grant for talkgroup 21904, which means the controller received a transmission from a unit to request to talk on that talkgroup.
The control channel sends out a message that anyone tuned to 21904 will receive transmissions on channel 605 (866.075 MHz). This is because a table in the scanner (or to-way) maps (cross references) the channel to a particular frequency.

After refarming, channel 605 will no longer be 866.075 MHz. It will be 863.3625 in the new lineup.
New two-way radios will have this information programmed in their radios so they will track properly.
Old radios will be looking in the wrong place and you might just hear random transmissions from any radio service that the scanner tunes to.
See this list for the old and new channel designations:
http://www.motorola.com/cgiss/800rebanding/docs/Pre-%20Post-DecisionBandPlan.pdf

Also check out this handy graphic that shows how the band looks currently and how it will look after the change.
http://www.motorola.com/cgiss/800rebanding/docs/BandPlan.pdf

After all is said and done, public safety (and business) radios will be able to use low-pass filtering techniques to further help in minimizing interference from Nextel/cell phones.
This will also lead the way for scanner manufacturers to incorporate this into future design of their radios to help tune out these transmissions that can't and are illegal by law to monitor anyway.
They may also come out with filters you can connect between the antenna and radio to attenuate signals above 861 MHz.

Nextel is paying for the move of public safety and business users nationwide. In return, they are getting 10 MHz of spectrum in the 1.9 GHz band.
Wish I could get a new scanner and send Nextel the bill.

Would be nice if there will be an upgrade for the 296 but that leaves my 235 and 780 behind for conventional use.

Remember the frequency changes 15 MHZ the steps are
12.5 KHZ and 25 KHZ. The entire band change is on the
FCC web site. I have said before there is a lot of bad
information out there. Some systems change and some
may not. It all depends on what region they are in.
Lets don't jump of the bridge yet. -- Myles Barkman

Ahahaha, I'm an idiot. I never snapped that trunking control channels tell radios to go to a channel # and not a frequency. I wonder if this leaves EDACS/Pro-Voice systems out in the cold too, since their radios are programmed with the system's entire frequency lineup and not just the control channels.

What I wished someone would do is come out with an 800MHz-only trunktracking scanner with the front-end specs of a commercial radio. You can't tell me something like that wouldn't sell, regardless of where it was priced.

Now what I DON'T understand, is the method trunk trackers use when you do program all the freqs of a type II system in and do not chose to track it "control channel only". That would be nice if somehow that method would still work after the move but I don't know how they do the tracking in that regard. It still would not be optimal for STAR-Net since they seems to like to change up the frequencies they use at various sites. Would be a lot of research and reprogramming to keep up with changes.

The reason why trunk trackers won't work isn't because of the frequency change, it's because of the map that MOT Type II uses right now won't be valid after the band changes. Like Myles already explained earlier the LCNs for all of the channels are changing, therefore your trunk tracker will go to the wrong frequency when told to follow a talk group.

--- In HoustonScan@yahoogroups.com, mark french <markfrench2002@y...> wrote:

So, if I interpret the information correctly. A scanner will still work on the new MOT type II frequency plan, but, unless you have a way to teach your scanner the new map (IE new prom, flash upgrade, whatever) you will not be able to trunk track the groups. You will be able to scan them in what might be called conventional mode.
I assume from this that the alpha tags you enter into that bank will still work as long as they are associated with the correct talk groups.
Is that not correct?

Here is info from the Uniden website regarding their radios and rebanding.

http://snipurl.com/e400

From another discussion group regarding rebanding here is their thoughs on which radios will and willnot be able to function properly. It is though that some radio's allow for the Base Freq, Offset, and Step to be reprogramed into the radio which most likely will allow them to work.

I thought only Type I needed mapping. I swear I read somewhere that Type II used BCD to send the frequency. How else could they be adding frequencies all the time? Are you saying the Type II map covers the entire current banding?

Here is info from the Uniden website regarding their radios and rebanding.

http://snipurl.com/e400

From another discussion group regarding rebanding here is their thoughs on which radios will and willnot be able to function properly. It is though that some radio's allow for the Base Freq, Offset, and Step to be reprogramed into the radio which most likely will allow them to work.

# 9290. Re: 800 MHz refarming

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-03 21:23:12 UTC
From: scanfan02
Topic: 9273  Message: 9290

As I interpret it as of right now, the Pro-96 is only compatible out of the box for 9600 after rebanding, 3600 won't work (As I understand it, I could be wrong

From: scanfan02
Topic: 9273  Message: 9291

I don't exactly know how a trunk tracker works, but I am guessing yes, they do have a predetermined map (all of those LCNs) for Type II. There would have to be, every other type of system has a map of some sort, so there would have to be a predetermined one for Type II.

From: Eric
Topic: 9292  Message: 9293

HPD for the area(s) they work,
Metro PD,
Constable precinct for their area(s),
HFD (and any other FD/EMS for their area(s)),
Sheriff Departments for the county(s) they are in,
any municipal PD that they can run in.

This is as far as I know, from asking wrecker drivers that I used to
b.s. with when I was waiting for a trip.

I listened to pretty much the same things when I was driving a taxi..
plus the freqs for Liberty, Yellow, United, Fiesta, Square Deal, City,
and AAA cab companies.

The only difference is the wrecker drivers do it all at once, instead of
a scan of different freqs/banks. =)

# 9295. Hey all, I'm a new guy, PRO-2051?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-03 17:00:26 UTC
From: Bow
Topic: 9295  Message: 9295

Hey all, I'm a new guy

I live in Northwest Harris County [Jersey Village] and would like to monitor that Trunking systems the Sheriff Dept uses around here.

Southeast Texas Area Radio Network (STARNET)
Motorola Type II SmartZone Most of Harris County's public safety and services operations are on this Motorola Smartzone system. The Starnet system covers numerous counties in the SE Texas area, so a number of different agencies share this system for communications.

Will the Radio Shack PRO-2051 suit my needs?

And what software would I need to program it?

Thanks

Bow

# 9296. Re: wreckers

From: scanfan02
Topic: 9292  Message: 9296

They listen to the same frequencies we listen to. Do you mean what frequencies do they talk on? Anyways, they listen to about 10 - 15 different radios depending on where they work. PD, FD, Harris County Sam (Tollroad) Channel, other wrecker companies, SO, VFD, EMS.

You don't actually need any software to program it, you can use the kepad on the scanner, it is just software is easier and more flexible to use.

Thanks...

Yup, I started punching in the Downtown Freqs and Tomball too. It even seems to be working... LOL

I am not sure which ones are better for my area though.

You don't actually need any software to program it, you can use the kepad on the scanner, it is just software is easier and more flexible to use.

For information this a brand new dorm that just opened this year. Only
incoming freshman are allowed to be in it.

# 9302. prisoner escape

Just heard on HPD South Central dispatch that Harris County Precinct 6
reported a prisoner escaped from the jail downtown(?) about 30 minutes ago
(10pm).
Heard a description but didn't catch what the guy was arrested for.
I hear HCSO K-9 on their TG 19088. Bet they are out on this.

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-06 23:42:50 UTC
From: Meldrak
Topic: 9303  Message: 9303

When I was about 18 I didn't pay a traffic ticket once and went to jail downtown a few years later when I moved back to Texas and got caught speeding. They had issued a warrant for my arrest. It was a simple matter to pay the fines and I was released and I now pay all of my tickets on time.
The point is while I was there I noticed how lax security was. I had four chances to escape while there and someone actually did run off. The guards didn't even try to catch him, they just shrugged and said now he gets an escape charge and will go to real jail.
Anyways I don't think this sort of thing is rare. There are just chain link fences around the downtown jail and the gates stay open during daylight hours, the processing area is about 50 yards from the gate and the doors stay open during processing or did while I was there.
Very interesting but I would bet this happens more than anyone would admit to.

What sort of ops are going on on 460.400 B9 tonight?
Hearing activity from a unit 2044 talking to 71 Fox and 30 Adam, 30 Edward units.
Are there VIPs in town?
Wonder if the 2044 and 2041 units are Secret Service or State Dept depending on who the folks are.

OK, I started wondering if it could have been Bush 41 (daddy). I also heard the familiar 165.7875 MHz active in P25 mode but didn't catch it on the digital scanner. Heard the transmission on 164.400 at the same time so wondering if they have some sort of repeater set up. Either that or the remote base in DC was just simulcasting on multiple frequencies.

# 9308. Looking for a list of FD/EMS two-tone sequential paging tones

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-08 13:19:07 UTC
From: Mark Goad
Topic: 9308  Message: 9308

This may be slightly off-topic, but does anyone know where (or if) there is a "published" list (or anyone's private list, for that matter), of the two-tone sequential paging tones (i.e., the actual frequencies of the tones themselves) for the various Fire Departments and EMS agencies, in and/or around Harris County? In particular, I'm looking for the paging tones that the voice pagers listen for, in order to unmute the pager's speaker, for the Alvin Fire Dept. and the Friendswood Fire Dept. I also need tones for the Highlands, Crosby and Channelview Fire Departments, as well.

Thanks for your indulgence. :-)
Mark.

# 9317. Re: [HoustonScan] HPD OPS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-08 22:12:54 UTC
From: Myles Barkman
Topic: 9311  Message: 9317

Oh please! Who makes counterfeit $1 bills?
Personally, I prefer making fake pennies. Part of my make-it-rich slowly scheme.
Who's going to be looking out for those?

From: Myles Barkman
Topic: 9311  Message: 9319

I'd like to see that. Maybe you can scan it and send it to the list.
Haven't heard of a law saying you can't photo copy fake currency.

Go to CompUSA or Best Buy or your favorite computer
store and buy a 2-port KVM switch. LinkSys has a good
one for around $50.00. I have used one for 18 months
and it works great. The cables are included. Please
note that USB versions are slightly higher.

Was on Ch 13 news. Will be moving over the next few weekends
according to the news.

Not sure what their current primary function is now. Back a few
years ago they were primarly a check clearing house for all the
banks in this region. I had a part-time job to go to the Federal
Reserve at 7:00 PM and pick up the canceled checks for courier
delivery to the local banks across this part of Texas. Never did see
that much money at the Federal Reserve. The most money that I ever
saw in one place was the old First City Bank. They had an
underground parking lot just for Armored cars to make their
drops/pickups. I remember being in the counting room while working
for National Cash Register many years ago and money was stacked from
floor to ceiling.

The Houston bank is a branch of the Dallas Federal Reserve bank. The old bank downtown kept lots of cash in the basement vault and counting areas. Most (or all) of the basement is for cash counting and storage. I took a group tour of the bank several years ago. However, you are right about checks. In fact, due to the increasing use of electronic transactions (and corresponding decrease in the use of checks) the new bank of Allen Parkway ended up being way too big. Last I heard they were thinking about renting out space in the new building because they didn't need all the room.

# 9331. Conroe aircraft drill on 154.28

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-12 16:31:24 UTC
From: Josh W.
Topic: 9331  Message: 9331

It sounds like they've got a talkgroup on the trunked system patched to VHF through a base station. I'm not in range of the trunk, but the signal on VHF is very good; almost as good as the county repeater. Someone that is in range might want to do some searching; might yield a new talkgroup.

# 9332. Re: [HoustonScan] Conroe aircraft drill on 154.28

No new talkgroups... This was drill to test resources and inter-operabilty devices. The patch to 154.28 is not new. The drill should be complete by 1300.

What is Air-1 used for? I had in my list that 05-011 may have been Mont Co Parks.
I show 05-014 as the airport.
Actually, I show 05-014 as being the talkgroup that is 649 decimal so maybe that was just a typo.

Air Med 1 was probably used to simulate the air transport of some patients and to assign some resources to the establishment of an LZ. I attended the first planning meeting, but unfortunately (or fortunately), I have been in Denver this week attending a conference.

# 9341. Montgomery County

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-13 03:12:54 UTC
From: Rob Camper
Topic: 22  Message: 9341

Montgomery County will be switching to Harris County. The MCHD is wanting to ditch the responsiblity of the radio system. The City of Conroe and Montgomery County own the channels. Conroe and MCSO want to get on Star-Net. Hence there will be a parting of the ways with MA/COM. The Board of the MCHD wants to get rid of the Responsiblity/Burden of running a Public Safety SMR. They have not made much vocal noise of this.

Put the following into perspective:

Nextel rebanding will pay for a large chunk of new radios and infrastructure plus the additional use of Homeland Security funds.

Why replace with MA/COM equipment when the surrounding counties, Liberty, Harris, Waller, Walker, will all be on Star Net.

Q1 2006 could be very interesting around the Houston/Galveston area.

Keep you eyes on the following:

Star Net sites in:

Columbus
DPS Pierce (Jackson County)
Beaumont

City of Laporte Moving to Star Net
City of Friendswood Moving to Star Net
City of League City (new TX and RX antenna and infrastructure)
Santa Fe ISD has already moved to Star Net due to lack of Coverage from the Galveston County System. More to follow

RC

i think its goint to be interesting if they got to STAR-NET because of smartzone tech and the closest sites to MC area humble tamina and i think waller

i also know that some of us on here are IPN dispatchers for the houston chapter and it would be easier for us to monitor MCHD and have better coverage for MC

but i got one more question of the for sites that MCHD has are they going to be converted from EDCAS to motorola and who will own them?

I am the Assistant EMS Director, at MCHD, incharge of communications. I do not personally know you, but I have to say that your information is not completely correct. MCHD does not want out of the radio business, in fact, our radio shop performs work of over 30 city/county agencies.

It is true that the Conroe and Montgomery County do own the channels, but Conroe has not indicated that they want off. MCHD and Montgomery County accually have an Interlocal agreement that a number of the channels are to signed over to MCHD.

While it is likely that one day Montgomery County will be on the Harris County system, it will be a slow migration that is likely to take several years, not starting for several years.

If you would like to talk offline, I will be back in Montgomery County next week.

Thanks,
Frank

# 9346. Conroe's aircraft emergency drill

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-13 20:11:13 UTC
From: cool2dtouch
Topic: 9346  Message: 9346

Simulated crash, mock bomb threat part of Conroe's emergency drill
By:Arie Wilson, Courier staff
05/12/2005

Firefighters and law enforcement officers worked to free "victims" of a simulated airplane crash and secure the site of mock bomb threat at the Lone Star Executive Airport as part of Conroe's Emergency Management drill on Thursday.

The exercise was planned to satisfy state requirements to receive $23,000 in Emergency Management Program Grant funding, said Fire Chief Bland Ellen.

At 10:29 a.m., a call was placed to the Lone Star Executive Airport claiming to have a bomb inside the building.

"The caller said that if (airport personnel) didn't believe him to just look outside and they would see what he had already done," Ellen said.

A donated fuselage had been partially buried a couple days in advance to have the actual appearance of a crashed airplane, Ellen said.

Pans placed inside the fuselage emitted smoke and Conroe Fire Department and emergency responders were able to practice on the mock crash site.

"This was a really unique situation because we had two of those fuselages donated to us by a company that stripped the planes for their parts and didn't intent to certify them as airworthy," Ellen said.

As reports from Houston Intercontinental Airport seeking an aircraft that had "disappeared" from radar screens came in, the Emergency Operations Center was opened in Conroe Towers.

Assistant Chief Robert Matheson headed the faux EOC command base, directing city of Conroe officials and coordinating emergency response efforts on at the site.

With 15 minutes, Conroe Police Chief Charlie Ray, City Administrator Jerry McGuire and a host of department heads filled the EOC room, manning phones and directing their staff to assist in the recovery efforts.

Just before noon, Matheson stood in front of a projection screen with a timeline of events to give his first update.

"In the last hour and a half there have been two confirmed plane crashes and a bomb threat at the airport," Matheson said. "We have confirmed nine people are dead, called for a temporary morgue and a Justice of the Peace."

Bomb dogs from the Conroe Independent School District were called in to search the airport's administration building, and air ambulance helicopters searched for the crash sites from above, Matheson said.

The city's Public Works Department placed barricades at the site and

the Finance Department secured emergency city funds to pay for necessary purchases.

As Matheson coordinated the city departments, Ellen fielded procedural questions from staff on their individual rolls in the event that a real disaster had occurred.

"This is the first drill we've actually had to do in several years because we have activated the EOC," Ellen said. "Also, we have a lot of new city staff and we thought it would be good to show them how this will go."

Flooding and inclement weather over the past two years have forced the EOC into action.

The city of Conroe uses a state-approved hazard-emergency management plan to follow during times of disaster, Ellen said.

The plan distributes responsibility to each department and acts as a guide for the city.

"A real emergency is a little more hectic, but it all much works the exact same way," Ellen said.

# 9347. CW vs Text Messaging

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-14 14:47:13 UTC
From: CBoone
Topic: 9347  Message: 9347

For those who missed it last night on Leno, good ole Morse Code (CW) won out over text messaging....
Here is a link to view/download it at:
http://www.tarc.org/index.php?load=leno About 13 MB so if you are dialup, prepare to wait...

BTW the Morse code team consisted of Chip Margelli K7JA and Ken Miller K6CTW dressed in old telegraph operator outfits.
Chip and Ken do a lot of contests and DXpeditions. Chip is also a high level manager with Yaesu USA, which sells amateur/ham as well as commercial 2way gear. Joe Drago, props manager for the sho,w is KF6OCP.

This is the 2nd time in a row CW has beaten the best in text messaging.....and the message sent this time was hilarious!!

I have the Tomball antenna freqs set up in my pro-91.
The problem seems to be with the control channel.
All I get is static.
The channel bank is empty except for this setup.

Any thoughts ???

ps.......I live in the greater tomball area.

# 9349. Audio: Tornado - Houston - 1992

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-14 20:09:21 UTC
From: C V
Topic: 9349  Message: 9349

In the process of converting my old audio cassette tapes to digital I found one that may be of interest to the group.

On November 11,1992,a series of tornados struck Houston. I recorded about 40 minutes of audio of the Skywarn weather net before I lost power on that day.

This is audio of spotters giving locations and desciptions of tornados and related activities.

I have converted the audio from the cassette to a mp3 file. The quality is 32Kbs and the file size is about 2 MB.

Send me an email if you want a copy and I will reply with the mp3 file.

Greetings, all.
I am Jason n1iic and my wife and I will be visiting Sugar Land in two weeks.
I am hoping to find some P96 files of the area so I can do some listening while I am in the area.

Thank You!

I'd like to listen to it. I see you sent a sample of the file to the Yahoo Group.
You can send the entire 2MB file to the group website if you like.

I know the weather service would be interested in getting this file to integrate into their Skywarn training.
Their presentations use a laptop now which they can play audio clips. The Nov.1992 outbreak is already part of the training so the audio would be a good companion. I'm putting Gene Hafele of the weather service on the CC of this to get his input.

Amber Alerts, which notify the public to missing children, could soon be ringing on your cell phone.

Cell phone customers can sign up to receive the alerts as of Tuesday.

The alerts will provide messages similar to those that appear on road signs.

Most cell phone providers will offer the service.

Subscribers can select the areas for which they want to be notified.

For more information, visit www.wirelessamberalerts.org.

Fire at the Texas Roadhouse restaurant at the Beltway and Spencer.
Coming from an exhaust vent in the roof. Light smoke in the building, power cut off, everyone evacuated.
Small fire being knocked down now.
Ops on TG 7312 on Local System, not on STAR-Net.

Fire in detached garage of vacant residence. 6800 block Cedar Lawn cross
Bayfair, keymap 578J.

Don't know what is going on with Pasadena's radio system but fire units
talking on fire-1 are not coming through the repeater.
Dispatch is relaying what the mobiles are saying.

Units say it appears the fire has crossed through the breezeway into the
residence.
Making fast attack.

I think Pasadena must have reprogrammed their portable fire radios and they aren't working on the local system.
Units are now operating on Fire-3, talkgroup 7344 through the STAR-Net system, which is NOT simulcasting on Fire-1 on the local system like it used to.
Perhaps the portable radios are set up to use sysid 2318 and tone 82.5 Hz which will not work on the local system which is still using sysid 3536 tone 76.76 Hz.
Perhaps they are getting ready to change the local system over to a bonafide STAR-Net site.

Heard mention Tuesday night that the amateur radio club was postponing
a work day at the police station because city and county radio techs
were working down there.

What it sounded like was they somehow hobbled the receive side of the
trunk system. The transmit range sounded fine, but portables weren't
getting in and mobiles were scratchy. Also, Patrol 1 (6576) and Patrol
3 (6640) are still linked.

OK, that's something I didn't consider. I was also thinking that somehow
they jacked with the system so certain blocks of IDs were being rejected and
I think they have mobile and potable IDs in certain groups.
I did notice that even certain mobiles were weak out at the fire yesterday
and when they went to Fire-3 on STAR-Net, everyone was fine.
Wonder what was going on with the antenna/receiver.

What talkgroup do they use?
I have in my list that they might use 3632 on STAR-Net but I've never
confirmed that.
Perhaps they use the Fort Bend Co FD common dispatch talkgroup of 3984.
I didn't even know they used 154.445 MHz.

Date: 2005-05-22 02:15:30 UTC
From: Myles Barkman
Topic: 9367  Message: 9367

Brazoria County SO is assisting Fort Bend County SO with a suspect search in the area of 288 and Hwy 6-keymap 652P.
Don't know the details of why he is wanted but BCSO just took dogs off the leash and advised that Fort Bend may be getting a helicopter out there.
There was a pursuit from Fort Bend County that ended there and the suspect is on foot.
They found a magazine to a 9mm Glock so the perp could be armed.
DPS is also on scene.
Ops on STAR-Net 23952 BSCO 1, 2480 FBSO Tac-1 and 159.210 MHz DPS.

On an unrelated incident occurring now, there is a jumper on the Gulf Freeway threatening to jump onto the Beltway.
HC Pct 8 is closing westbound traffic to the Beltway at Hwy 3. Ops on STAR-Net 11664 Pct 8 and 460.025 HPD.

# 9371. Re: [HoustonScan] suspect search Brazoria Co

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-22 02:24:48 UTC
From: Myles Barkman
Topic: 9367  Message: 9371

Wasn't sure if I should put the jumper as a special or traffic advisory, so
I just flipped a coin and went with traffic.
I know I wouldn't get the page though since I don't subscribe to traffic
advisories.

Fox is overhead the scene on Hwy 6 now.

# 9373. Re: [HoustonScan] pasadena fire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-22 06:56:55 UTC
From: Josh W.
Topic: 4202  Message: 9373

3632 is a good TG for Pecan Grove. It doesn't sound like they're dispatched by the county, either. I've heard the 154.445 freq too (callsign is WNBR882, btw), but not long enough or well enough to confirm a PL.

Also. Pasadena has installed some new antennas on the tower behind the police station, presumably for the trunk system. System ID is still 3536, but some new, strange IDs are popping up on police radios in the 765xxx range. Before, they were mostly in the 712xxx - 713xxx range

-Josh

# 9374. HSCO districts

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-22 14:24:30 UTC
From: Myles Barkman
Topic: 9374  Message: 9374

Hearing traffic on all SO dispatch talkgroups except 5520, district 1.
Hearing those units on 19120 which was reserved for the yet-to-be created
district 6.

Does anyone know what unit 4034 would be? Heard them on D3 8976.
Are all Central units on TG 14896 4700 numbers?

# 9375. dead Metro train track

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-22 14:45:40 UTC
From: Myles Barkman
Topic: 9375  Message: 9375

Sounds like a section of track, either northbound or southbound on the Metro train line near Fannin and 59 is dead.
There is a train on that section of track.
Appears that they will try running train traffic the wrong way on the live track for now but it is causing some nightmares for PD since the signals are not set up for trains going the opposite direction.
Ops on 14960 Metro PD 1 and 15248 Metro PD TAC-2, and most likely the Metro LTR system which we can't track anyway.

They had 2 mobile command units setup at W FM 1960 @ Kuykendahl, this weekend. With prom/grad activities taking place, they were probably running a Zero Tolerance Task Force.

Hi Myles,
Yes the talkgroup you have for Pean Grove is correct and they do simulcast on 154.445. Up until a few days ago you could hear the mobile units too on 154.445.

Hearing those units on 19120 which was reserved for the yet-to-be created
district 6.

Does anyone know what unit 4034 would be? Heard them on D3 8976.
Are all Central units on TG 14896 4700 numbers?

4034 is a traffic unit. traffic units mostly work accidents.

The law enforcement agencies in the Districts 1 and 5 area were having a Traffic Initiative, click-it or ticket, zero tolerence program (no front license plate, burned out tail light, weaving, exhibition of speed, etc). The a large number of accidents in the FM 1960/Veterans Memorial/Kuykendahl roads area is one of the reasons behind this program.

As for using the D1 talkgroup and not another, a Tac talkgroup, for example, it is my understanding that not every agency in the area has D6 programmed into their radios, and not every agency has the Tac talkgroups, too. So, D1 units were transferred to D6, and participating units with the Traffic Initiative used D1.

As a result, we now know that D6 can be used for other programs in addition to the Super Bowl and the Singh Houston Open.

For those of you who used to listen to SAC (Strategic Air Command) alerts on HF in the day, I hear something familiar on 311.000 MHz today. It was an EAM message with bad sounding audio and steady signal earlier today, possibly originating from Ellington. Kind of sounded like there was a data signal mixed in with the audio. Anyway, the familiar Skyking message went on with the letters and numbers, and signed off but I could not tell what base they said at the end.
I knew I left those freqs in the scanner for some reason. Anyone else hear transmissions on 311.000 MHz anymore?
Wish I had recorded it.

More likely it was from an E-6B TACAMO aircraft in the southeast Texas airspace. They tend to re-broadcast the EAM's on both HF and UHF frequencies while on mission.

Hi Everybody,

I just wanted to remind everybody that Eric Burrer with Cy Fair has set up a group for working incidents:

http://groups.yahoo.com/group/hou_disp/

It's for instant notification of emergency incidents in the Houston area, for folks with wireless devices. So please join his group and post any working incidents there, please include location, incident, frequency and brief description.

Thank you very much,
Marvin

But, an exhibition of speed attracts the attention of the officer, who then will be able to find pc for a traffic stop, which may, or may not, lead to criminal charges, if a criminal, not traffic, offense is discovered during the traffic stop. But, exceeding the speed limit, or racing, can result in the driver receiving a souvenir from the officer.

Hello:

Often these Eams are simulcast on 321.00 mhz also.

Typically at the end of the transmission they will sign off with a call sign rather than a "base".

I do hear them quite often when I have the time to monitor. I monitor mil air more often than public safety.

Best regards,
Leslie Bartosh, kd5yyr
Galveston Island, Texas

Utility pole falls on roof, sparks two-alarm fire
05:29 PM CDT on Monday, May 23, 2005
From 11 News Staff Reports

A utility pole fell on the roof of an apartment complex at 3803 Synott in west Houston, sparking a two-alarm fire.

KHOU-TV

A utilities pole fell on the roof of the Ashford Creek Apartments, sparking a blaze.

The pole fell over after being eaten away by termites.

The blaze started on the second floor around 3:15 p.m. at the Ashford Creek Apartments. A second alarm was sounded as the blaze spread to other units.

No residents were injured.

While I truly did not intend to spark a debate on this unworthy topic, probable cause must exist independently of this now former traffic offense, for the stop to be valid. Just "attract[ing] the attention of the officer," is not enough to warrant the stop. I, or any other officer, can develope "pc" on just about any driver, if I follow them for long enough. FYI, exceeding the speed limit and racing are not the same thing as the former "exhibition of acceleration" offense. And the "racing" statute, now qualifies under state law, as a class B misdemeanor, which does not result in a "souvenir" (assumming you meant to substitute souvenir for "ticket"). Racing now gets the driver arrested (not a ticket), and a trip to the county jail, which is a quite a bit more than just receiving a citation. This is about all the time I have to devote to this thread. On to far more important matters. Cheers gents!

But, an exhibition of speed attracts the attention of the officer, who
then will be able to find pc for a traffic stop, which may, or may
not, lead to criminal charges, if a criminal, not traffic, offense is
discovered during the traffic stop. But, exceeding the speed limit,
or racing, can result in the driver receiving a souvenir from the
officer.

Sorry for trying to interject a bit of hoomer into a somewhat serious topic. I guess no one can chuckle anymore.

A "souvenir" can also include bond paperwork, commissary slip receipts, a unique wristband, and, quite possibly, a Nick Nolte-ish style portait (if "they" will let you have a copy).

--- In HoustonScan@yahoogroups.com, Mark Goad <batlabs@a...> wrote:
> While I truly did not intend to spark a debate on this unworthy topic, probable cause must exist independently of this now former traffic offense, for the stop to be valid. Just "attract[ing] the attention of the officer," is not enough to warrant the stop. I, or any other officer, can develope "pc" on just about any driver, if I follow them for long enough. FYI, exceeding the speed limit and racing are not the same thing as the former "exhibition of acceleration" offense. And the "racing" statute, now qualifies under state law, as a class B misdemeanor, which does not result in a "souvenir" (assumming you meant to substitute souvenir for "ticket"). Racing now gets the driver arrested (not a ticket), and a trip to the county jail, which is a quite a bit more than just receiving a citation. This is about all the time I have to devote to this thread. On to far more important matters. Cheers gents!

Let me rephrase both previous statements.

Near, not in, the West Houston Airport, in flight, travelling west
to east.

Don't know if this was the source of the messages, but, with the
reassigning of missions in the past couple of years...

# 9406. Sugar Land help

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-24 19:01:21 UTC
From: Jason Greene
Topic: 9406  Message: 9406

Greetings, all. Since no one had a P96 file for the Houston area, I have some questions.

It appears that Sugar Land uses the Missouri City trunk as their primary system. Do they have for a backup or did Motorola sell them all their eggs in one basket?

I am primarily interested in fire communications. Does anyone have any secret squirrel frequencies?
How about any other things that might be interesting?

Thanks

Jason n1iic

# 9407. SCANusa.com? anyone checked this out?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-05-25 09:40:17 UTC
From: Eric
Topic: 9354  Message: 9407

I just signed up for SCANUSA (The Secure COPS Alert Network) at
http://www.scanusa.com

I must admit, it looks interesting. Supposedly it will track - by zip
code - sexual predator, neighborhood crime, public safety neighborhood
annoucement, fire, traffic emergency, health emergency, environmental,
and weather alerts, as well as statewide Amber alerts, and generic
Cyber, Consumer fraud, and "other" alerts.

The system will let you choose which alerts to track, will let you enter
in several zip codes to track. When an alert is issued on one of your
selected items/zips, the system will send you a notice via your
method(s) of choice, which can include: e-mail, SMS (by phone number,
with a decent list of wireless carriers supported), fax, AIM, Yahoo IM,
ICQ, and/or MSN messenger.

If it gets fire and crime/police entries accurate, it could be the free
solution those of us who can't afford IPN are looking for. Don't know
what the delay is, will be interesting to see.

Hmm.. this appears to be a service of SBC. How interesting.

-Eric

You should keep in mind there is a utility to convert between win92(.spg)/win95(.p95)/win96(.p96) files if you can find a file in another format. It is called WinXXDataConverter.exe.

Nope. All of Sugar Land FD is on the Mo. City trunk, along with
Stafford and Mo. City themselves. Same for PD. They might use the
NPSPAC/ITAC channels for simplex chit-chat, so you can try that too.
As for other things to listen to, there's a STAR-NET site on the Mo.
City tower, and the primary Fort Bend County site down in Richmond. It
has decent coverage up that way.

I'm not surprised they responded like that. That's pretty typical when you ask such things from public safety agencies.
All the info can be viewed from a couple of sources:
http://home.houston.rr.com/freqzone/freqs/missouri_city.html
http://www.radioreference.com/modules.php?name=TRSDB&sid=57

Thing is, frequencies that they use are no secret. They are required by the FCC to post their license near their dispatchers.
All the frequency info can be obtained by searching the FCC records.
Problem is, that doesn't usually give you the whole story so you sometimes have to find what you are looking for on a scanner website, especially for talkgroup info since the FCC has nothing to do with talkgroups.

I didn't know about that little tool. Thank you. Where can it be found?

What is the next best system to listen to beside the Mo. City system?

As far as multiple alarms or station coverage, is mutual aid handled
via the phone or on another frequency?

Thanks again

Jason

Subject: Re: [HoustonScan] Skyking...skyking

Hello:

Often these Eams are simulcast on 321.00 mhz also.

Typically at the end of the transmission they will sign off with a call sign rather than a "base".

I do hear them quite often when I have the time to monitor. I monitor mil air more often than public safety.

Best regards,

Leslie Bartosh, kd5yyr

Galveston Island, Texas

Myles Barkman <kg5ai@...> wrote:

For those of you who used to listen to SAC (Strategic Air Command) alerts on
HF in the day, I hear something familiar on 311.000 MHz today. It was an
EAM message with bad sounding audio and steady signal earlier today,
possibly originating from Ellington. Kind of sounded like there was a data
signal mixed in with the audio. Anyway, the familiar Skyking message went
on with the letters and numbers, and signed off but I could not tell what
base they said at the end.

I knew I left those freqs in the scanner for some reason. Anyone else hear transmissions on 311.000 MHz anymore?
Wish I had recorded it.

Do you know what the police department talkgroup is? I presume they
switched over too cause I do not here anything on the 800mhz

# 9424. New Walmart DC

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-05 16:15:00 UTC
From: Myles Barkman
Topic: 9424  Message: 9424

Check out this story about the massive new distribution center in the swamps
off Tri City Beach Rd.
http://www.chron.com/cs/CDA/ssistory.mpl/front/3211156
Here's the pending FCC application for the frequencies to be used there:
http://svartifoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/uls_site_res.hts?db_id=19&link=&appli
cation_id=2974580

In a nutshell:
repeaters
451.4125
451.4875
451.7125
452.0875
452.1625
452.3125

simplex
451.6625
451.7375
462.2125
462.2375
462.2625
462.3125
462.3375
462.3625
462.4125
462.4875

None of these appears to be for data use so they may all be for voice.
Repeaters are only 20W at about 40 feet so range would probably be within 5
miles if that much.
So the folks in Baytown and maybe La Porte might hear it.

Actually, I hadn't been out that way so I don't really know what the area
looks like. But I have been to the old Baytown neighborhood of Brownwood
about 15 years ago or so when you could still drive down the streets.
I have cracks in my 10x10 patio slab. You think a place that big could
possibly run into drainage/foundation problems?

I wondered that too. They also have a repeater on 154.160 MHz possibly as a backup for station dispatching.
Don't know if they have any mobiles or walkies programmed for this.

From: elentz1
Topic: 9424  Message: 9433

That's the difference, you haven't been out that way......

This is very near the Racetrack and one of the older steel mills, not Armco. Pasadena is sitting on a major fault area and it's not subsidence that's causing all the problems. Try and find a street in Pasadena that's level and minus the cracks in the roadway. It's not as bad out in the south side of the city but the north (older) part of the city is in very bad shape.

With the piers that were sank before the slab was built this thing will float very well. The elevation is also higher than anywhere in the city of Pasadena so flooding will be a minor problem.

The original article on this Distribution center a couple of years ago stated that Wal-Mart would employe about 50 of their own employees and the other several hundred will be a contract company. This is the general trend in all american companies these days to hire contract employees.

The Distribution center will be totally automated so I'm sure some of these frequencies will be for the fork lifts and other automated machinery regardless what the license says.

Brownwood was built just north of the Old Humble Refinery and on the beachfront. Most of the water used in the refinery and city of Baytown was from underground wells and that greatly acclerated the subsidence. Also with the whole coastline sinking from natural subsidence (New Orleans 15' below sea level) then it stands to reason that most of the Brownwood subdivision is now a park.

The information is on Myles' list:
136.5 154.370 *FIRE Bacliff/San Leon Dispatch (GCSO trunk 59312)

and at:
http://www.radioreference.com/modules.php?name=RR&ctid=2606

It appears you may be the on-site investigator to confirm this.

# 9438. MVA with officer?

From: Myles Barkman
Topic: 9438  Message: 9438

Sounds like hit and run with a HPD cruiser.
Ops on North Shepherd Patrol 460.325 MHz.
An officer called for EMS for his partner, they are looking for a white van with heavy damage.
Requesting fox.
Generally in area of Tidwell and Fulton.

# 9439. houston radio problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-08 21:46:13 UTC
From: Myles Barkman
Topic: 9439  Message: 9439

Not sure where the problem is but HPD and HFD dispatchers are notifying personnel in the field that their radios/computers could go down at any moment because of air conditioner problems. I suppose this is a problem at the HEC.
HPD is asking officers to send a message with their cell phone numbers as a back-up.
HEC is a secure facility, with razor wire, a wall, and a guard shack entrance. But it can't handle the heat.

If this problem is indeed only a problem at the HEC, they just need to operate using hand-held radios if the system goes down.
If the problem is at a repeater site, that's another issue but I thought there were backup sites around the city to take care of this contingency.

Date: 2005-06-08 23:20:29 UTC
From: Scott Royall
Topic: 9439  Message: 9440

Where do you think the repeater controls are? Did you really believe those consoles just keyed local transmitters? You're a ham so you should know that all repeaters are required to have remote controls. Hams use silly little Touch-Tones, but you know the big guns need better security. Rest assured those consoles key their respective repeater transmitters via dedicated lines. When/if those consoles overheat...

I thought you knew all of this stuff. :)

Aircraft crashed into residential area just southeast of the county airport.
Hillgreen and Jeffcote streets.
Keymap 159N.
TV news crews on scene and enroute.
Channel 13 says this is near Jeffcote and Hwy 105.
Some ops on 158.820 MHz. Most must be on MCHD trunk.

From: jsglock@swbell.net
Topic: 9442  Message: 9442

I have a BC780xlt and scan the Deer Park/Pasadena/LaPort PD/FD. My question is....why do I hear the local water/street dept during the day? I have the correct freqs and tags inputed just for pd/fd. Also...there is a occasional screeching tone that comes on and my only choice is to lock it out....thus, shutting out that freq. Any suggestions or help is appreciated. jg

# 9444. Re: houston radio problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-10 03:48:19 UTC
From: elentz1
Topic: 9439  Message: 9444

From what I understood the problem was the HVAC system went down on the floor with all the computers. They were afraid the MDT's would be going down and the majority of dispatching is done with the MDT's now. Also all 28 & 29 are run with the MDT's and that system would be down also. Had nothing to do with the regular two-way radios except the radio traffic would be constant on every channel.

As usual more was made of this than needed. Union get's involved to tell how bad the city is (which they are a big part of) and the press gets involved because of lack of real news. Many times in the industrial plants HVAC units go down and most all process controls are computerized now. The computers go down and lot's of things can go boom really quick! Portables are rented and set up within very short time and things are just fine.

Portable HVAC units are available on very short notice and with several of the large portables you would have icles hanging from the inside of windows at 61 Reisner.

# 9446. RE: [HoustonScan] Re: houston radio problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-10 04:25:50 UTC
From: Michael W. Jones
Topic: 9439  Message: 9446

In most of the computer rooms I work in (or have worked in), they usually build redundancy into those cooling systems. Some even go as far as redundant power feeds to the facilities as well.

In major facilities, these systems are wired to a monitoring system, that can notify the appropriate personnel if a system fails, or if temperature and humidity are out of normal limits. These monitoring systems will also indicate if the FM-200 (Environmentally Friendly Replacement for Halon) system has discharged or other facility related issues (water under the raised floor, for example).

I've also had the opportunity to work in computer rooms that were built on the cheap, and the building air conditioning was trusted over a redundant stand alone system. When the fire alarms shut the Air Conditioning down, or the air conditioner failed, here came all of the fans we could find to keep equipment cool.

(I know that computers generate a lot of heat... I have three machines in my home office, and it is always 3-5 degrees warmer than the rest of the apartment.)

Mike Jones (With his nationwide pager at his side for the computer rooms that he monitors)

Well, I know enough to be dangerous. I've never dealt with commercial 2-way installations so I don't know all the intricacies.
One thing I didn't realize is that all the communications equipment was at 61 Riesner.

I suppose this means the controllers since all the repeaters are not at that site.

I made a comment that if it was just the consoles that went down, that the dispatchers could use hand-held radios. I got to thinking about that and I'm not sure just how well hand-helds can get in/out of the HEC. Maybe someone can shed light on this.

>Had nothing to do with the regular two-way radios except the
radio traffic would be constant on every channel.

From what someone told me, they were in danger of loosing all radio comms from HEC through 61 Riesner.
One contingency the city may use is to use one of HFD's channels to run PD traffic on. Yes, "one" channel.
Sounds scarry but how well do you think dispatching through cell phones would work?

Another thing you need to check is that the frequencies are entered as
trunking freuencies. When you enter a frequency, press and hold the
Trunk button for about a second, and the scanner will beep twice. You
should also see a a small "T" icon in the display. After you've done
that, you should be able to hit "Trunk" and "Scan" and it'll take
right off.

# 9451. RE: [HoustonScan] houston radio problems

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-10 18:52:37 UTC
From: Scott Royall
Topic: 9439  Message: 9451

Even if HTs could reach the repeaters from inside the HEC, you're not considering the battery drain of the nearly-constant transmitting. Public safety radios aren't ordered with features you and I take as givens, like AC adapters. Yes, Purchasing buys the charging racks, but have you ever seen an individual charger in a police station? DC cradles in the cars, but not AC.

Much the same issue would keep HPD from "borrowing" a HFD channel. Sure, it's technically possible, but how long would it take the radio shop to reprogram all of the affected radios? You're assuming cops get the same features that hams and scanner nuts demand. They don't. In fairness, this minimalist approach is usually ok, because most cops know nothing about frequencies and PLs. They're happy if their radios are as simple to use as the remote control for their TV at home. :)

I thought HTs were commonplace backup systems for the dispatchers. I've
seen other departments with them in dispatch. Don't remember if they had a
bank charger there too.
Even if they only got to use them for an hour or two, it's better than
nothing when the computers go down.

> Much the same issue would keep HPD from "borrowing" a HFD channel. Sure,

I didn't make it clear that this option is one the city is actively looking
into as a backup plan.
PD radios have one HFD channel programmed into them (don't know which one),
and HFD has one PD channel programmed (Citywide?).

And we don't even charges in the cars (unless we bought them off ebay).
Fortunately, up in HEC, each radio has an extra battery and there is a rack
charger. The radios don't get out of HEC very well though, and seem to received
even worse.

>

All HPD handheld radios (and the new cars as they come on line) have HFD
A6 in them, and all HFD radios have HPD A5 Citywide in them. When this was
started a year and a half ago thuoght was given to just such a situation as was
looming this week. Whoever had a radio system go down could "borrow" 1
channel from the other to at least squeek by on.

Steve

The assault-weapons ban was racial profiling for guns.

I know that the work cycle is not plan/start/finish, but is wait/plan/plan.

Nope, we don't really have any and we're not allowed to put them on
ourselves. City says they are expensive, easily damaged, and nto repairable.

I guess you could put one on every day when you picked up your radio and
take it off before you turned it in but that'd get to be a hassle. I don't
know anyone who is doing it, but there's probably at least one somewhere.

I must be stupid, because I don't get it.

I don't get why Houston has historically been afflicted with worthless management. It's not just HPD, although that's what we're discussing here. Of course, I don't know what HPD policy is on personal weapons, but I would do things very differently. In my world, each patrol officer would be issued four main items: a badge/ID, a pistol, a vest, and the most reliable and compact HT Motorola can offer. That's right, each patrol officer would live with his/her radio. This would compel most officers to become more aware of the care on feeding of those radios. Some officers might not bother, and they may not live to regret it. I would also only issue one battery pack free each year. Others would cost the officer. Stretching the life of a pack to a year isn't easy; it requires a level of care similar to the weapon. The flip side of my approach is that it wouldn't cost much more than the current crap because you'd not be putting two complete radios in the cars.

I know, it will never happen. It's too logical.

# 9460. Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-11 16:23:04 UTC
From: djboutit12000
Topic: 9458  Message: 9460

Jerry's Electronics 59N and exit Parker 4212 Haywood Street 713-697-3310 might be open today if you go early. Also 4 G's just before Baytown I10 East get on 19 and ask which exit 4 G's is @. Both of these places will do peaks & tunes to cb radio I would goto Jerry's Electronics call for directions if you do not will never find it is located in a small house.

Jerry's Electronics is - as far as I'm aware - the place to go. Been taking radios there since I was 16 (of course I'm only 27, now, but still). ..I miss the old CB days. Back when I lived in Humble, everyone was on the CD, from kids I went to school with, to an entire community of folk. Eventually, most went to 2 meter, and the rest of us just died out. Noone left to talk with, anymore.. and since I moved to down here near Mission Bend, I just decided to get rid of the equipment. Noone to talk to, down here, doggoneit. But I sure do miss those days.

Jerry's. definately.

Ah, the good old days of CB, remember those rabbit hunts in and about Houston? CB's pushing out 1000+ watts from a home made ant. Those were the good old days. Key up and no one in my subdivision could watch TV on ch- 2, 3, 4. Or else it would cause stereo's to turn on in the middle of the night.....

Large apartment fire 2401 Repsdorph at Forest Cove Apts building 1100.
Got Pasadena and Webster mutual aid.
Seabrook ops on 154.385 MHz
Pasadena reporting 2-story building, 12 units, 4 of top six units heavily involved.

From: Michael W. Jones
Topic: 9470  Message: 9473

All I can say is I'm glad my dryer is located in the corner of my unit, and the only piece of flex duct I have to deal with is the one piece from the dryer to the wall... The remaining 10 inches is solid pipe through the exterior wall to a vent.

Also I'm glad my complex has sprinklers...

Now if they would have done a better job of soundproofing...

Mike Jones

From: Myles Barkman
Topic: 9470  Message: 9474

Believe this may be a 3rd alarm now.
Hear Pasadena, Webster, Forest Bend, Friendswood and Kemah mutual aid.
League City may be involved too.
Heard a wall collapsed in the building.

Webster FD is patching Seabrook primary 154.385 through Fire-2, STAR-Net
talkgroup 14480.
It is going through the Houston site.

# 9475. RE: [HoustonScan] Seabrook apt fire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-12 04:16:41 UTC
From: Bow
Topic: 9470  Message: 9475

Hell, Good signal..

I am picking 154.385 up at 1960 and 290 using a BearCat BC350A and a
Scantenna in the attic.
-----Original Message-----

Behalf Of Myles Barkman
Sent: Saturday, June 11, 2005 23:09
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] seabrook apt fire

Believe this may be a 3rd alarm now.
Hear Pasadena, Webster, Forest Bend, Friendswood and Kemah mutual aid.
League City may be involved too.
Heard a wall collapsed in the building.

Webster FD is patching Seabrook primary 154.385 through Fire-2, STAR-Net
talkgroup 14480.
It is going through the Houston site.

I was outside on my balcony talking to the neighbors when this all went down. Flame above the treetops.

Believe this may be a 3rd alarm now.
Hear Pasadena, Webster, Forest Bend, Friendswood and Kemah mutual
aid.
League City may be involved too.
Heard a wall collapsed in the building.

Webster FD is patching Seabrook primary 154.385 through Fire-2,
STAR-Net
talkgroup 14480.
It is going through the Houston site.

# 9483. Re: [HoustonScan] seabrook apt fire

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-12 04:45:41 UTC
From: Myles Barkman
Topic: 9470  Message: 9483

Many departments are running traffic on their own freqs/talkgroups:
Pasadena on FIRE-3, STAR-Net TG 7344
Webster on FIRE-2 STAR-Net TG 14480, patched to Seabrook 154.385 MHz
Forest Bend same as Webster
Friendswood on 159.225 MHz
Kemah 158.895 MHz
Nassau Bay unknown (dispatched by Webster Comm Center), hearing nothing on
154.205 MHz
League City on their system FIRE TAC-1 TG 432
CLEMC 155.400 MHz

Got one FF with heat exhaustion.

Wow... That sucks.

I guess for every small plane owner, this will be an expensive problem...

Not to mention every low end scanner that is made is getting closer to
"Paper Weight" Status...

Looks like it won't happen for at least another 5 years.

Wonder when railroads will start using the new narrowband channels and
possibly go digital.

# 9488. Re: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-12 12:22:14 UTC
From: Eric
Topic: 9458  Message: 9488

Yes, but I'm out in Mission Bend area, and really can't afford a linear amp, right now. Not to mention I have no place to mount an antenna that would not result in a hefty fine by the home-owner's association. I suppose I could slap something flat against my roof, but what's the point in doing that. Not to mention, with only a few watts (I've never seen a radio boosted past 25 watts, itsself, and I can barely afford to get a cheap 4 watt radio shack model), watt [sic] would be the point?

Perhaps if I get a few hundred to blow on a good rig, a good amp, and come up with some sort of antenna that will work with the deed restrictions they have in place, here (or someone to climb a tree and put a 110" whip near the top), then I'll get back into it... For now, however, Voyager/ATX859 is staying off the air.

I do miss it, though. 21 was home channel for the Humble crew, and upper side of 37, I believe, was favoured for dxing. I still remember about ten or so handles from that area. Makes me wonder how many (if any) watch this group.

Anyone know of any radio shops besides Radio Shack? I was really looking for a place to get a CB peaked and what not. Tried searching on Yahoo yellowpages... closest one was in Deer Park...

---

If the radio is working ok, then leave the CB alone...it works as it should from the factory...."peaking" it does nothing but cause interference and other problems....splatter, overmodulation, etc does NOT increase range but hurts it..Most of these "tweak" shops only sell crappy junk and hype.....the radio works fine as is (it was not designed for anything more)
If it needs repair, then any good radio shop will do..but if you want illegal mods done, forget it...

Why not get a ham license, modify the radio to 10mts and talk all over the world with it as it is! (I have with a straight 12w PEP SSB CB moved to 10mtrs..and plenty of FM work using modified HyGains on 29 MHz FM!!)

Chris
WB5ITT
EX KDO-2700 (when licenses were required on CB)
FCC Commercial PG-9-5322 since the 1980s (once requried to work on CB)

Topic: 9458  Message: 9493

Get 2- 9 ft whips from Radio Shack.

Build a dipole out of them mount it as high as you can, but as out of sight as you can, in a vertical arrangement.

Get an SSB capable radio, AM is child's play.
SSB gets you 12 watts of legal power. If you can't talk on 12 watts SSB, , a linear amp isn't going to help you.

Stay legal and you stay out of trouble, not that the FCC cares much, but your neighbors will if you go blowing across there TV's and toasters.

I am also a Ham, but until they lose that CW requirement, I'll stay a Tech... I don't have much time for it any way... also a FCC Commercial License.

Perhaps if I get a few hundred to blow on a good rig, a good amp, and come up with some sort of antenna that will work with the deed restrictions they have in place, here (or someone to climb a tree and put a 110" whip near the top), then I'll get back into it... For now, however, Voyager/ATX859 is staying off the air.

I do miss it, though. 21 was home channel for the Humble crew, and upper side of 37, I believe, was favoured for dxing. I still remember about ten or so handles from that area. Makes me wonder how many (if any) watch this group.

...I thought they lost the CW requirement, completely, except for extra class.

Have no clue how to build a dipole, but I'm sure I could find out (I never claimed to be a good tech, just a good user, heh).

The problem with mounting as high as I can is getting into the tree in the backyard. I have a live oak in the backyard that goes pretty high, but as I am large enough to qualify for two men, climbing a tree is not my forte. I guess I'll need to find someone who's willing to work for a beer and a steak, heh.

I wasn't thinking of 1,000 watts or anything, just a nice 50 watt boost, boost the radio, tune it well, and come out pushing around 75 watts. For AM that's decent, for SSB that's more than decent.

Been considering getting my tech, but I have noone to help me learn, and still run into the money issue as a decent 2-meter radio costs a lot more than a CB. It would be nice to be able to do something besides listen to the scanner when they activate storm spotters. While a cellphone is handy, the saltgrass link makes it much more worthwhile. Plus some of the Internet-based DXing is always amusing.

...a job at a radio store... that's what I need.

You should study radio a bit more. A 50w "boost" is meaningless on shortwave, which is where the classic Citizen Band is. VHF and above is different because it increasingly relies on line-of-sight. On shortwave, raising your signal by one lousy S-unit requires doubling your actual output.

Subject: RE: [HoustonScan] Re: Radio Shops

You should study radio a bit more. A 50w "boost" is meaningless on
shortwave, which is where the classic Citizen Band is. VHF and above is
different because it increasingly relies on line-of-sight. On shortwave,
raising your signal by one lousy S-unit requires doubling your actual
output.

...I thought they lost the CW requirement, completely, except for extra class.

Have no clue how to build a dipole, but I'm sure I could find out (I never claimed to be a good tech, just a good user, heh).

The problem with mounting as high as I can is getting into the tree in the backyard. I have a live oak in the backyard that goes pretty high, but as I am large enough to qualify for two men, climbing a tree is not my forte. I guess I'll need to find someone who's willing to work for a beer and a steak, heh.

I wasn't thinking of 1,000 watts or anything, just a nice 50 watt boost, boost the radio, tune it well, and come out pushing around 75 watts. For AM that's decent, for SSB that's more than decent.

Been considering getting my tech, but I have noone to help me learn, and still run into the money issue as a decent 2-meter radio costs a lot more than a CB. It would be nice to be able to do something besides listen to the scanner when they activate storm spotters. While a cellphone is handy, the saltgrass link makes it much more worthwhile. Plus some of the Internet-based DXing is always amusing.

...a job at a radio store... that's what I need.

Exactly...

If you can't get it with 4 Watts AM or 12 Watts SSB, 500 watts isn't going to improve your signal.

# 9501. RE: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-13 13:52:14 UTC
From: Charles Crook
Topic: 9458  Message: 9501

Here's what I did once:

Crafted a fake birdhouse out of a plastic bird feeder (you can use a real one).

Connected 2 ten foot PVC pipes together making a 20 foot pole.

Ran coax up through the pipe to the top (Cut an opening in the lower section to feed in the coax.).

Made a dipole for 10 meters and connected it to the top with the wires coming out of slots cut in the top. Connected insulators and more wire to fasten to anchors.

This made an "A" style antenna.

Put the birdhouse on the top.

Installed it vertically in the back yard next to the house.

I assembled it on the ground.

When the nosy homeowner's association Nazi asked about it, I told him it was a birdhouse and the wires were guy wires. I said nothing about the fact that the guy wires were an antenna. He grumbled some but there was no deed restriction against an ugly birdhouse installation. He couldn't see into my back yard from the street, so the coax coming from the house into the pipe was not visible.

It took them 5 years to figure out what I was doing. By then, I was moving into a new house.

Regards,

Charles Crook KA5UWU

From: Marvin Suggs
Topic: 9502  Message: 9502

Hi Chris,
Have you been to Port Arthur lately? I noticed there's a (approx 200') tower with a huge horizontal beam antenna on it. It's located west of Hwy 69 and north of 25th st. Any idea who's it is? Looks too massive to be a Ham antenna. It's around where the old KOLE transmitter was.

Thanks,
Marvin

I want to know what the birds had to say about that though. I bet you were getting into their little TV/radios pretty bad.
Could have caused harm to their unborn offspring too. Did you not conduct an environmental impact study to make sure no harm would come to the rare sparrow?

Hey, if they ask about a cable coming out of the birdhouse, tell them you hooked them up with cable. :)

# 9509. Re: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 00:35:51 UTC
From: Eric
Topic: 9458  Message: 9509

Hmm...
Myles, could you suggest a good online resource for learning about these things? My financial situation is limited so I must go online for information. I probably have enough coax and other accoutrements lying around the garage, however, to make an antenna - if I knew how to do so. heh.

Thank you,
-Eric

# 9510. RE: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 01:36:22 UTC
From: Bow
Topic: 9458  Message: 9510

Dude...

build a Dipole.

For 11 meters, each leg is about 9'

You can use almost any wire you can find.

Or... 2 of the Radio Shack Stainless Steel 9' whips [$15 each].

# 9511. Re: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 02:19:28 UTC
From: Eric
Topic: 9458  Message: 9511

Again, I don't know how to build a dipole, hence the request for a good online resource for learning about these things.

Is it so hard, today, for people to realize that newbies still exist, and to help them out? (I know you're helping, but you're not really listening to what I'm saying. Or else I'm not being clear.)

# 9512. Meadows?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 09:08:07 UTC
From: Eric
Topic: 9458  Message: 9512

Does Meadows have an FD? If so, does anyone have the freqs or tgs for their channels? I have all the PD data for them, but nothing on FD.

Thanks,
Eric

# 9515. RE: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 15:46:30 UTC
From: Charles Crook
Topic: 9458  Message: 9515

Yes Eric,

It will almost be the same as the 10 meter birdhouse antenna I had. In fact, my ham rig has 11 meters on it and I would sometime go to 11 meters and use the birdhouse antenna.

I suggest buying a center connector as used for a dipole. Choose one that matches your coax so you can screw your coax into the connector. The center connector will have a connection at each end. attach your antennae wires there. They can be made of anything metal although copper coated drawn steel is ideal. Copper is good but may stretch. I've even used electric fence wire, which is cheap and plentiful.

Each element or wire should be about 91 inches long. Check www.hotsotcb. com for a freq antenna length calculator. You should cut both wires to equal length.

# 9516. RE: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 15:51:43 UTC
From: Charles Crook
Topic: 9458  Message: 9516

Actually, it was a fake birdhouse. I painted a black spot on it as a fake door. You couldn't see from the ground that it was a fake opening. My wife claimed the birds were mad cause the couldn't get in. This was when they were up there being noisy. I probably sterilized my share of birds.

I want to know what the birds had to say about that though. I bet you were getting into their little TV/radios pretty bad.
Could have caused harm to their unborn offspring too. Did you not conduct an environmental impact study to make sure no harm would come to the rare sparrow?

Hey, if they ask about a cable coming out of the birdhouse, tell them you hooked them up with cable. :)

# 9519. Re: [HoustonScan] Re: Radio Shops

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 22:36:27 UTC
From: Eric
Topic: 9458  Message: 9519

So let's see if i have this correct...

To build a birdhouse antenna like you had, I would take a 20-foot length of PVC pipe, run my coax up inside it to, etc... bring the antenna wires out of the birdhouse up top, and at the ends, install insulators (so the additional "guy" wires don't radiate) and additional wiring to get it to ground level, connect as guy wires to something about equidistance apart?

Hmm, on that same token, I suppose I could just go up in the oak in the backyard, run the coax in a buried pvc pipe to that point, and then run it up the trunk/limbs. In the middle of the tree, stretch the two, stretch the poles out across limbs, themselves. Only problem is.. would the tree block the signal?

If worst comes to worst, I can lead coax out of my window, up to my roof, and simply lay the dipole flat against the roof. I'm worried that would cause issue, though, with loss of signal strength, given that it's against a flipping roof. heh.

Subject: Re: [HoustonScan] Re: Radio Shops

So let's see if i have this correct...

To build a birdhouse antenna like you had, I would take a 20-foot length of PVC pipe, run my coax up inside it to, etc... bring the antenna wires out of the birdhouse up top, and at the ends, install insulators (so the additional "guy" wires don't radiate) and additional wiring to get it to ground level, connect as guy wires to something about equidistance apart?

Hmm, on that same token, I suppose I could just go up in the oak in the backyard, run the coax in a buried pvc pipe to that point, and then run it up the trunk/limbs. In the middle of the tree, stretch the two, stretch the poles out across limbs, themselves. Only problem is.. would the tree block the signal?

If worst comes to worst, I can lead coax out of my window, up to my roof, and simply lay the dipole flat against the roof. I'm worried that would cause issue, though, with loss of signal strength, given that it's against a flipping roof. heh.

Topic: 9458  Message: 9522

Ahh yes...

The internet is a vast key in itself...

Or I would say, if the internet is too difficult to use, go to your closest Half-Price books and find a copy of the ARRL Radio Handbook.. any year will have more Antenna information that most people will ever use...

another thought...

I live in a Jack-booted home owner's Assoc subdivision also..

I have a 40 meter dipole [that's 65 ft long for those who are not in the know] and a 20 meter dipole fanned off that [that is 30 feet long], nobody can even see them, I used the Radio Shack "Short Wave antenna kit.

Of course for 11 meter use and NDB hunting...as well as shortwave listening, I use a 21' Shakespeare NBS-2010 mounted on a 20' mast...

No one has said anything, and it has been up for 2 years...

;)

My homeowner's association is less fascist. Besides, there's a ham a few blocks north of me with 2 25' masts and a boatload of wire up. Looks like multiple dipoles to me.

I just guided one of my caregivers through moving my little 19' mast after my trees grabbed the G5RV and tried to bend the mast into a boomerang. Not good. My guy accidentally made the wire legs way too long, he basically made them long enough for the 160-meter super G5RV so I'm not complaining! Neither is my 706 Mk IIG! It heartily approves of that fresh 14 ga. insulated stranded copper. We couldn't find anything uninsulated, stranded, and heavier nearby. If I ever go crazy and get my ticket, I have an Icom AT-500 in the next room that will make that overgrown G5RV behave! :-)

# 9524. Re: dipole

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-14 23:19:16 UTC
From: Lee
Topic: 9458  Message: 9524

An inverted dipole is an easy antenna to build. I don't recall the equation to figure the length, but it roughly comes out to 8'6" total length on each wire leg. This wire is insulated on each end. You use RG 59 (TV coax) with the braided shield atached to one leg, and the center conductor to the other. Now some "in the know" radio people will try to tell you this setup won't work because the coax is 75ohm. However, the impedance of the wire is roughly 28 ohm, and when subtracted from 75ohm, coax gives you about 52ohm. You don't have to run the RG 59 all the way to the radio, but it needs to be at least a full wave length (18')and it needs to be perpendicular to the wire.

Hope this helps

Lee

Eric,

I gave you a bad web address as Bow pointed out. It should be www.hotspotcb.com. The one I gave you had all oriental characters. Not sure what that was.

Regards,

Charles Crook

Subject: Re: [HoustonScan] Re: Radio Shops

So let's see if i have this correct...

To build a birdhouse antenna like you had, I would take a 20-foot length of PVC pipe, run my coax up inside it to, etc... bring the antenna wires out of the birdhouse up top, and at the ends, install insulators (so the additional "guy" wires don't radiate) and additional wiring to get it to ground level, connect as guy wires to something about equidistance apart?

Hmm, on that same token, I suppose I could just go up in the oak in the backyard, run the coax in a buried pvc pipe to that point, and then run it up the trunk/limbs. In the middle of the tree, stretch the two, stretch the poles out across limbs, themselves. Only problem is.. would the tree block the signal?

If worst comes to worst, I can lead coax out of my window, up to my roof, and simply lay the dipole flat against the roof. I'm worried that would cause issue, though, with loss of signal strength, given that it's against a flipping roof. heh.

# 9527. Pasadena system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-15 23:46:16 UTC
From: Myles Barkman
Topic: 9527  Message: 9527

Been running T4Win on the Pasadena system today and yesterday.
Here's some interesting talkgroups that came up:
16 first seen 8am, last seen 10:18am Wednesday
11152 Harris Co Pct 1 Constables, seen once at 11:11am Wednesday
14448 Webster FD Disp, seen once at 10:52pm Tuesday

I'm not sure I have a lot of confidence in the last two since they only recorded one hit. Could have been a fluke.
I wonder about the 16 though. May be some sort of test talkgroup. Need some folks to program that in and give it a listen over the next few days.
Supposedly, things should be changing rather soon as far as the final assimilation into the STAR-Net system goes.
The system ID and connect tone are all still old Pasadena local system and nothing has changed with the frequencies used (I don't anticipate the freqs changing anyway).
The only things I've seen different is that the system is showing up as "site 1" and some of the radio IDs of the dispatch consoles have been changed.

Keep tuned and if you see other talkgroups popping up on Pasadena, then you'll know. Then let us know.

From: Bow
Topic: 9458  Message: 9528

Blah!

What's a little Korean between friends... ;)

good looking radios though!

Eric,

I gave you a bad web address as Bow pointed out. It should be
www.hotspotcb.com.
The one I gave you had all oriental characters. Not sure what that was.

Regards,

Charles Crook

Subject: Re: [HoustonScan] Re: Radio Shops

So let's see if i have this correct...

To build a birdhouse antenna like you had, I would take a 20-foot length
of PVC pipe, run my coax up inside it to, etc... bring the antenna
wires out of the birdhouse up top, and at the ends, install insulators
(so the additional "guy" wires don't radiate) and additional wiring to
get it to ground level, connect as guy wires to something about
equidistance apart?

Hmm, on that same token, I suppose I could just go up in the oak in the
backyard, run the coax in a buried pvc pipe to that point, and then run
it up the trunk/limbs. In the middle of the tree, stretch the two,
stretch the poles out across limbs, themselves. Only problem is.. would
the tree block the signal?

If worst comes to worst, I can lead coax out of my window, up to my roof, and simply lay the dipole flat against the roof. I'm worried that would cause issue, though, with loss of signal strength, given that it's against a flipping roof. heh.

From: Peter Kirk
Topic: 9458  Message: 9530

Thousands of customers without power throughout SE Texas
ABC13 Eyewitness News
(6/15/05 - HOUSTON) - There's a major power outage underway in southeast Texas. Customers in at least eight counties are affected.

Get E-witness News sent to you
75 most recent local headlines
abc13.com slideshow archive
Put our news on your website

A transmission line failure is being blamed for knocking out the power to customers in Montgomery, Liberty, Walker, Grimes, Polk, San Jacinto, Hardin and Tyler counties.

The outage apparently began around 7pm Wednesday. According to Debi Derrick with Entegy, the line failure caused the Lewis Creek plant near Conroe to go off line. She says approximately 57,000 customers are without power.

Local authorities are running back up generators to provide power. All 911 systems are reportedly operating normally.

Conroe police are asking residents to stay home, however, if possible. They are calling in extra staff to help man intersections without traffic lights. They have also requested residents avoid calling police to report power outages and call for emergencies only.

Crews are working on the situation. Officials hope to have electricity restored by midnight.

# 9531. Re: [HoustonScan] power outage?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 02:52:44 UTC
From: Myles Barkman
Topic: 9458  Message: 9531

Was about to comment on the same thing. Hearing hams on several repeaters talking about it.
Hearing Conroe and Cleveland folks saying it will be out anywhere from 8 to 24 hours.
146.900 Cleveland
147.140 Conroe

Conroe FD on 154.190 MHz
Cleveland PD on 155.655 MHz

Wonder how long the Montgomery County EDACS trunk system power backup can run.

Channel 2 News reports that a transmission line at the Lewis Creek power plant in Willis failed and is anticipated to be up by midnight. States that about 57,000 customers are without power.

# 9538. Re: [HoustonScan] power outage?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 03:16:47 UTC
From: Myles Barkman
Topic: 9458  Message: 9538

Channel 2 is interviewing a rep from Entergy live on the phone right now.
He says probably at least 100,000 people w/o power, and that power may not
be restored until LATE TOMORROW.

Three major generating plants down due to the failed transmission line.

The Conroe police chief is begging people to stop calling 911 and talking
about the food in their refrigerators.
Temps are in the mid to upper 80s. I'm glad I'm not up there now.

Listening to folks on the 147.020 MHz Conroe repeater. Power started coming
up in the Roman Forest area about 10 minutes ago then went down and up
again.

# 9540. RE: [HoustonScan] power outage?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 03:32:37 UTC
From: Peter Kirk
Topic: 9458  Message: 9540

Late Tomorrow! and no A/C ouch!

I can just hear those phone calls to 911:

911: May I help you?

Caller: Yes we have no power and I have $500 worth of meat going bad in my freezer, can you help!

911: Yes have a Very large Barbecue for your area!

Good Luck to all those who live in the affected areas.

Subject: Re: [HoustonScan] power outage?

Channel 2 is interviewing a rep from Entergy live on the phone right now. He says probably at least 100,000 people w/o power, and that power may not be restored until LATE TOMORROW.

Three major generating plants down due to the failed transmission line.

The Conroe police chief is begging people to stop calling 911 and talking about the food in their refrigerators.
Temps are in the mid to upper 80s. I'm glad I'm not up there now.

Listening to folks on the 147.020 MHz Conroe repeater. Power started coming

up in the Roman Forest area about 10 minutes ago then went down and up again.

# 9542. Major goings on @ Surf Shack?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 07:25:22 UTC
From: Eric
Topic: 9458  Message: 9542

Anyone have any info on what happened at the Surf Shack, this morning around 01:30 - 01:45? I heard five or six units on HPD westside responding; HFD sent Amblulance 28, 528, a superviser, engine 28 (I believe), possibally others, and a call was put in for a first responder, with requesting party stating that more than 100 people were involved (which would probably be the entire club's Wed. night crowd).

I only caught the units stating en route/arrived on HPD, and a little traffic TAC 4, HFD, but I missed the initial calls.

(See, that's the trouble when your interests lie in FBSO, HCSO SW, FBC EMS, Community Volunteer, and HPD Westside... You tend to miss some interesting things. (I really should put them all in one bank on the scanner, but I've heard of issues with monitoring trunked and non-trunked freqs in the same bank with a pro-95.))

-Eric

THATS WHAT U GET FOR LISTENING TO CHANNEL 2, WATCH THE OTHERS, CHANNEL 2 WASNT EVEN OUT THERE, MISSED ALL 9 MAJOR HOUSE FIRES, EVERYONE ELSE GOT AT LEAST 2, MISSED THE INTERVIEW ON THE POWERPLANT FIRE, NOBODY ELSE DID, WASNT STARTED AT LEWIS CREEK. WAS STARTED NEAR BEAUMONT AND TRICKLE AFFECT. I LIVE IN CONTROE AND AT 715 VOLTAGE DROPPED TO 54 VOLTS AND STAYED TILL I KILLED BREAKERS. EVER SEE SPRING FIRST IN ON A HOUSE FIRE IN CUT N SHOOT? THEY WERE TONIGHT. OR WOODLANDS AND NEDHAM ROAD FIRST IN AT PANORAMA VILLAGE FIRE? AND ONLY 100,000 AS 2 SAID , HELL MONTGOMERY COUNTY ALONE HAS 362,000. AND THE PHONE INTERVIEW WHICH SAID NO FIRE. GUESS THOSE PRETTY LIGHTS FLASHING WERE FOR THE HELICOPTERS TO FIND. TURBINE WAS ON THIRD FLOOR, BURNING INTERNAL AT OVER 1000 DEGREES, NO WATER JUST 3 HOURS OF FIRE EXTINGUISHERS. AND SPRING WAS THERE TOO. WHAT A NIGHTMARE, EVERYONE PREPARING FOR ALL NIGHT NO POWER WORRIED ABOUT LOOTING, POWER BACK BY 1130.

Give him a break. He was in the middle of the mess and his adrenalin level was appropriately high. Especially considering Ch 2 was comfortably camped out at a motel and the other reporters were in the field being drained by mosquitos. Even Ch 26 had to rough it using a cell phone to report in, although the camera and microwave worked.

Scott's got thick skin.

I thought the numbers were low also, but I think that they are reporting customers vs. population. Low nonetheless.

I was a long night!!

Frank

Give him a break. He was in the middle of the mess and his adrenalin level was appropriately high. Especially considering Ch 2 was comfortably camped out at a motel and the other reporters were in the field being drained by mosquitos. Even Ch 26 had to rough it using a cell phone to report in, although the camera and microwave worked.

# 9547. NASA broadcast frequencies

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 20:26:16 UTC
From: sandyj
Topic: 9547  Message: 9547

for those that have wondered what frequencies NASA broadcast on here is two of them that are used.

regards
sandyj

==========
Video from the rollout will feed on NASA TV available on the Web and via satellite in the continental U.S. on AMC-6, Transponder 9C, C-Band, at 72 degrees west longitude. The frequency is 3880.0 MHz. Polarization is vertical, and audio is monaural at 6.80 MHz. In Alaska and Hawaii, it's available on AMC-7, Transponder 18C, C-Band, at 137 degrees west longitude. The frequency is 4060.0 MHz. Polarization is vertical, and audio is monaural at 6.80 MHz.

# 9549. San Jac College PD

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 21:46:12 UTC
From: Myles Barkman
Topic: 9549  Message: 9549

Is San Jac College PD no longer using the Pasadena system for the campus in Pasadena?
They were using talkgroups 27632, 27664, and 27696. I haven't logged any activity on those talkgroups the past few days.
San Jac PD had started using TG 15600 on STAR-Net again. At first I thought it was just the North Campus but maybe everyone is there now.

# 9550. Re: power outage?

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-16 23:22:46 UTC
From: bpckty1
Topic: 9458  Message: 9550

Another thought:

Perhaps Scott had to get the info out before he lost power, again.
;^>

And, I'll bet when he was able, he bought a couple of cases of
insect repellent, with DEET, of course.

Thank goodness the numbers were low because of where the power
outage happened.

Imagine the same event in Harris, Galveston, and Brazoria Counties.
Now, that would truly be a nightmare on (name your street)."

And, imagine the fun and games with the high rise buildings and
residences.
:^<

I hope the locals have been well trained for this possibility. I've
been stuck in a few elevators before, but, at least the lights, AC,
and intercom/phone worked. Imagine this repeated all over town with
no power and the cell phone sites being overloaded. At least the
media would have plenty of choices for their news reports, broadcast
to powerless TVs. ;^>

HI Chris,
Thanks for the info. That installation has always stirred my attention.
That'd be cool to find out who's using it. Hey do you still work for
Entergy? Just wondering what the scoop is on the black out? Sounds like they
lost some transmission lines in China, TX. 15 out 16 lines. Does that mean
15 circuits? And is that 138 kv?

Thanks,
Marvin

Due to the major financial problems they are having they have been closing shop in other areas as well. Sounds like they are going down the drain quick. LCEMS, CLEMC, TCFD, Galv EMS, and SFFD/EMS are covering most areas of the county as there contingency plan.

My opinion is this county needs to go to a agency that is run by the county. Just an opinion as they have had nothing but trouble with private services.

You know the guy with the gun pointing it at the window or door? Well I think that guy stole jewelry (the bag or whatever had a tracking device). So Pct. 4 was on the phone with the security company about the tracking device, and the Tollroad units were trying to find him from 249 all the way to CE King Pkwy on the Sam. Well, the Corporal got smart and blocked the road down there, and the suspect started shooting and somehow the suspect got back in his car and went around the road block so they stopped him at CE King Pkwy. There were more shots fired and a Pct 4 officer was shot (won't say his unit number). They also found out that there was a lady with the black male suspect. They shot her and him, she appeared to be DOS. The Pct 4 unit was shot in the arm and he was lifeflighted. The lifeflight report sounded good with nothing serious.

From: Myles Barkman
Topic: 9563  Message: 9563

Early Friday morning when the rail cars near Wallisville and Sakowitz overturned, I heard HFD Hazmat using HMST-1 TG 35632 on the City of Houston Motorola trunk system. At least one car had a load of sodium hydroxide pellets that spilled. They were asking each other if turning the car upside down would stop the leak.
I wonder if HMST could stand for Hazardous Materials Strike Team instead of Houston Medical Strike Team.
I see lots of references to the medical part and they are trained for nuclear, biological, and chemical issues.
Check out this page:
http://www.houstontx.gov/fire/divisions/specialops.html
In addition to HMST, there is HMRT which is the Hazardous Materials folks.
Maybe that's what these talkgroups should really be called.
Looks like you don't want to be around if you hear the HMST people talking.

I was out at Houston Raceway (The dirt track just south of Mt. Belvue), and the wind came up something FIERCE. I was having trouble walking against it, and at one point standing against it. Felt like a huge gust front coming through. Shortly after that, it rained a bit (Not too much, and not hard at all) for about ten minutes. It must have just bypassed us, but whoa it felt like we were either going to have a bad rainstorm, or a tornado, one. heh.

Looks like it was two separate incidents now.
The Montgomery scene ended there at the apartments peacefully.
http://abclocal.go.com/ktrk/news/061805_local_hostage.html

The robbery/shootout also was going on in NW Harris Co but didn't go down so peacefully as you know.
http://abclocal.go.com/ktrk/news/061805_local_deputyshot.html

I didn't get to listen in to all the traffic on either incident but wished I caught the second one as it unfolded.
Sounds like something that happens in Los Angeles.
The suspects got what they deserved and the Constable should recover fine.

Got this from the Chronicle:
Footage captured by patrol car video cameras may be released later this
week, officials said.

So be on the lookout!

None of the news sources mentioned anything about the tracking device. That
info was probably intentionally left out.

I noticed that outflow from the storm on the radar but didn't realize how gusty it would be. I was half-way done mowing my back yard when the winds came and I thought I was going to lose some limbs on my pecan trees. The power lines behind my house were blowing pretty good too.
After all that, all I got out of it was a wet driveway, not the torrential rain I was expecting. I had also noticed that the storm was falling apart as it moved west but the outflow survived. At least it made it a bit more bearable to be outside doing yard work.

Only a couple of high wind (>60 mph) reports around Port Arthur when the storm was at it's worst.

Has anyone heard about Goldstar EMS shutting down? I think they did a
story on Channel 11 about it, but I missed the whole story. They are
based in Port Arthur but provide EMS service to Galveston, Brazoria,
Jefferson and several other East Texas counties.

Thanks for any info,
Marvin

Topic: 9562  Message: 9569

Myles,

What radar links do you use? The only ones I really know of are
intellicast, weather.com, click2houston, and the NWS-HGX page.. but
nothing that gives decent resolution, or so it seems.

-Eric

# 9570. Pasadena trunk system

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-20 21:20:35 UTC
From: Myles Barkman
Topic: 9570  Message: 9570

OK, got some info that the change over to being a STAR-Net site is near completion. Just finishing up doing some physical work to the radio system to make it more robust for the extra traffic it will handle.
The change should occur in the next day or so (at most, this week).
When the change takes place, private call capability will go away so there will be quite a few talkgroups added for Pasadena agencies to accommodate their BS needs.

My choice is WeatherTap:
http://www.weathertap.com/
Images are usually between 4 to 6 minutes old at most. You have lots of options of what you want to display and how to display it.
You can also program locations that can pop up on the screen so you can tell when a storm is coming right at you or someone you know.
Could be overkill for the normal Joe who just wants to know if it's going to rain but if you are interested in weather or have more of a stake in what it could do to you, your property, or your business, it might be worth it.
Some basic features can be found on the Houston Weather service radar site:
http://www.srh.noaa.gov/radar/latest/DS.p19r0/si.khgx.shtml

There is also the new "ridge" experimental display of radar data:
http://www.srh.noaa.gov/ridge/hgx.html

Learn more about it here:
http://www.srh.noaa.gov/ridge/GIS.html

Topographical features don't really mean much around here though.

# 9572. Re: Goldstar EMS

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-21 15:37:05 UTC
From: CHRIS
Topic: 9551  Message: 9572

They are pulling out of the county Mon June 27th. Texas CIty with a court order confiscated all gold star units as they can per the contract. Since they are leaving before the contract is over. They have a 90 day contigency plan with bids being taken during that time. Galveston EMS will be the main provider during that time. Texas city will run there own for the time. chris

CB is on the Galveston Co trunked system for now until the switch to Star-net. The FD is on talkgroup 54352. You may also want Port Bolivar also which I will throw in for no extra charge. Talkgroup 53424 for them. Also used a lot on the peninsula is I-TAC 2 and Countywide Fire 55888. Hopes this helps. By the way there is no PD in CB no more if you were looking for a PD freq.

# 9575. Re: [HoustonScan] crystal beach

Yahoo group: HoustonScan (2005 — 2006)
Date: 2005-06-23 13:45:54 UTC
From: Josh W.
Topic: 9573  Message: 9575

53424 is a back channel for Port Bolivar FD and a couple of others.
Their primary dispatch is 54352 as well. Since they have no QCII tones
or conventional multicast, I guess all the FD members of each
department have their own radios.

Galveston SO patrols Crystal Beach, and they work on SO-1 (50032).
You'll want to keep an ear on there on the 4th, as things get pretty
hectic on the beach.

Harris County Pct. 4 is on STAR-Net, their TGs are:

11376 2C7 *Harris County Constables Pct 4 - Dispatch-1 (North)
11408 2C9 *Harris County Constables Pct 4 - Dispatch-2
11440 2CB *Harris County Constables Pct 4 - East (North-east of I-
45)
9808 265 *Harris County Constables Pct 4 - West (North-west of I-
45)

1680 069 *Harris County Constables Pct 4 - Supervisor "5"
11472 2CD *Harris County Constables Pct 4 - Warrants

West and East are both back channels mostly used for BS.

You can find these TGs and more at
home.houston.rr.com/freqzone/freqs/freqs.html or www.radioreference.com!

Found this piece of interesting documentation regarding US Coast Guard
Auxiliary Communications:
http://www.cgaux.org/cgauxweb/training/AUXCOM-ssg-5.pdf

Although some of the UHF air/ground channels have changed, there may still
be some good info in there.

I think the links to the Houston site have been down for awhile now.
They should be getting ready to flip the switch any day now (maybe this week) that will turn it into a regular STAR-Net site so that many more talkgroups will be heard both ways.
Apparently, whatever issues were keeping them from doing it last week put them too close to the weekend, and they didn't want to switch it over at that time in case there was a problem.
So let's see if it happens this week.

Some bad accident on the Toll Bridge south bound south of the toll booth.
Pasadena Fire on scene and possibly multiple PHI/Lifeflight Helos on scene
and/or enroute.
Talk of checking a wooded area for more victims.
Ops on PFD 154.010 MHz and talkgroup 7120 on Pasadena system.
ETMC Ambulance on 7664 Pasadena system.
Precinct 8 Constables on South-A 14832 STAR-Net.
Toll Law on TG 10416 STAR-Net.
PHI helo going to Hermann now with 1 patient.

OK, preliminary info is that a private ambulance was heading southbound in
the right lane with a critically ill patient when it had a tire blow out and
drove off the road into the woods.
Law enforcement on scene trying to do accident reconstruction.
Believe northbound traffic may still be shut down from 225 to let emergency
vehicles access the scene.
Some units going north on southbound lanes.

Speaking of NASA, The ISS will be flying over texas tonight and
according to the web applett on NASA's Site, it will be able to be
seen from the sky. it will be flying over us at about 9:30-9:45 ish.
And if you are a Ham you can talk with the ISS, the freqs are: uplink
of 144.49mhz FM.
The downlink is 145.2mhz. FM. I will try to contact, so listen for
call sign KE5FGC.

9011 is not a valid Motorola talkgroup ID. Your scanner is displaying
a false hit. Unfortunately, it's not like an image of a conventional
frequency, where you can do a little math and figure out what you're
actually hearing.

9011 is talkgroup 9008 patched with another talkgroup, if your scanner displays the status bit information. 9008 + 3 = 9011. The +3 indicates a patch to another talkgroup.
